Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE
WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

Introduction to the 2014 National Survey on Drug Use and Health

Introduction

This codebook provides documentation for the 2014 National Survey on Drug Use and Health (NSDUH) public use data file.¹ Prior to 2002, the survey was called the National Household Survey on Drug Abuse (NHSDA). NSDUH is sponsored by the Center for Behavioral Health Statistics and Quality (CBHSQ, formerly the Office of Applied Studies) within the Substance Abuse and Mental Health Services Administration (SAMHSA) and is conducted by RTI International, Research Triangle Park, North Carolina.²

For each variable in the 2014 data file, the codebook provides the variable name, a description of the variable, value codes and their meanings, and an unweighted univariate frequency distribution. Most of the variables originated directly as interview items. For a subset of variables created from more than one variable, the source variables and recoding specifications are provided. In addition, case identification, sampling, and data collection variables are included in the file and documented in the codebook. The variable names in this codebook are the variable names used in the dataset.

To a great extent, variable names indicate the meaning of each variable. As much as possible, variables are named consistently across surveys when the content of questions was identical or similar, or the specifications for created variables were not altered. When a variable does not have the same name across years, this is an indication that differences may exist. In such situations, analysts are advised to examine the codebook documentation in detail before conducting any analysis, particularly those that involve the following:

- analyses performed in prior years that are being replicated in the current year,
- comparison of data across multiple years, or
- use of pooled data from multiple years.

Documentation of the reasons for changing a variable's name can be found in comments above the specific variables and in corresponding appendix files within the codebook (if applicable). Typically, variable changes are documented the year they occur and in the following year if there are comparability issues to consider. However, the most current version of the documentation may not always describe relevant changes from prior years. Therefore, analysts who are doing a multiyear trend analysis are especially advised to examine documentation for all

¹ Information on access to NSDUH restricted-use confidential data files is available from the Substance Abuse and Mental Health Data Archive (SAMHDA) at <http://www.datafiles.samhsa.gov>.

² RTI International is a registered trademark and a trade name of Research Triangle Institute.

years of interest to identify any changes over time that may affect the analysis of interest.³ An analysis of trends is not recommended when using data where the impact of the questionnaire or methodological changes is confounded with true changes in the phenomenon being measured. If the change is considered minor and the likely impact on trend data would be minimal, then comparisons between years may be appropriate.

Analysts also are encouraged to refer to the instrument specifications for the 2014 survey in conjunction with their review of the codebook. The specifications for the 2014 survey provide detailed information about the logic governing how respondents were routed through the questions in the interview and any changes to the instrument relative to the 2013 survey. The 2014 specifications may be found on the SAMHSA website at <http://www.samhsa.gov/data/>.

Overview of NSDUH

The 2014 NSDUH is the 34th in a series, the primary purpose of which is to measure the prevalence and correlates of drug use in the United States. This survey series provides information about the use of illicit drugs, alcohol, and tobacco among members of the U.S. civilian, noninstitutionalized population aged 12 or older. The survey also includes several modules of questions that focus on mental health issues. Surveys have been conducted periodically since 1971, with the most recent ones in 1979, 1982, 1985, 1988, and 1990 through 2014. Currently, public use files are available for surveys from 1979 onward.

In 1999, the survey underwent a major redesign. The method of data collection was changed from a paper questionnaire administration to a computer-assisted administration. In addition, the sample design was changed from a strictly national design to a state-based sampling plan. These important changes have had a major impact on the data produced from the survey. *Because of the differences in methodology and the impact of the new design on data collection, only limited comparisons can be made between data from the redesigned surveys (1999 onward) and data obtained from surveys prior to 1999. Also, because of improvements made to the survey in 2002, the 2014 data in this file should not be compared with data collected in 2001 or earlier to assess changes over time. However, this is not an issue for data from 2002 and data files in subsequent data years, as long as other changes to survey items since 2002 (e.g., changes to question wording) have not affected the comparability of the variables of interest across the surveys.*

Prior to 1999, the survey was conducted using paper-and-pencil interviewing (PAPI) methods for an interview lasting about an hour. The PAPI instrumentation consisted of a questionnaire booklet completed by an interviewer and a set of individual answer sheets completed by a respondent. All substance use questions and other sensitive questions appeared on the answer sheets, so the interviewer was unaware of the respondent's answers. Less sensitive questions concerning demographics, occupational status, household size, and composition were asked aloud by the interviewer and recorded in the questionnaire booklet.

³ A variable crosswalk (also referred to as a "measles chart") that identifies which NSDUH variables are comparable across study years is available on the SAMHDA website at <http://www.datafiles.samhsa.gov>.

Since 1999, the interview has been carried out using computer-assisted interviewing (CAI) methods. The survey uses a combination of computer-assisted personal interviewing (CAPI) conducted by an interviewer and audio computer-assisted self-interviewing (ACASI). For the most part, questions previously administered by an interviewer in the PAPI format are now administered by an interviewer using CAPI. Questions previously administered in the PAPI format using self-administered answer sheets are now administered using ACASI. Use of ACASI is designed to provide respondents with a highly private and confidential means of responding to questions and to increase the level of honest reporting of illicit drug use and other sensitive behaviors.

A key feature of the CAI instrument is a core and supplement structure. A core set of questions critical for basic trend measurement of prevalence estimates remains in the survey every year and comprises the first part of the interview. Supplemental questions, or modules, that can be revised, dropped, or added from year to year make up the remainder of the interview. The core consists of initial demographic items and questions pertaining to the use of tobacco, alcohol, marijuana, cocaine, crack cocaine, heroin, hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives. Supplemental items include the remaining ACASI sections and demographic questions. Some of the supplemental portions of the questionnaire, however, have remained in the survey, relatively unchanged, every year (e.g., current health insurance coverage, income). Since 1988, additional information also has been gathered about crack cocaine and about sharing needles for the injection of drugs. In addition, the consequences of using various drugs have been given considerable attention since 1985.

The target population for the 2014 survey was the same as has been defined since the 1991 survey: the civilian, noninstitutionalized population of the United States (including civilians living on military bases) who were 12 years of age or older at the time of the survey. Before 1991, the sample was drawn from the household population of the contiguous 48 states. Residents of Alaska and Hawaii were added to the sample population in 1991, as were residents of noninstitutional group quarters (e.g., college dormitories, group homes, civilians dwelling on military installations) and individuals with no permanent residence (homeless people in shelters and residents of single rooms in hotels). In addition, six special-interest metropolitan statistical areas (MSAs) were oversampled in 1991. The 1992 and 1993 surveys retained the oversampling of the six MSAs and also were designed to provide quarterly and annual estimates.

Since 1999, the survey sample has employed a 50-state design with an independent, multistage area probability sample for each of the 50 states and the District of Columbia. For the 1999 through 2013 surveys, the eight states with the largest population (which together account for 48 percent of the total U.S. population aged 12 or older) were designated as large sample states (California, Florida, Illinois, Michigan, New York, Ohio, Pennsylvania, and Texas) with a target sample size of 3,600, while the remaining 42 states and the District of Columbia had target sample sizes of 900. The 2014 through 2017 sample design allows for a more cost-efficient sample allocation to the largest states, while maintaining sufficient sample sizes in the smaller states to support small area estimation at the state and substate levels. The 2014 through 2017 NSDUHs were designed to yield 4,560 completed interviews in California; 3,300 completed interviews each in Florida, New York, and Texas; 2,400 completed interviews each in Illinois, Michigan, Ohio, and Pennsylvania; 1,500 completed interviews each in Georgia, New Jersey, North Carolina, and Virginia; 967 completed interviews in Hawaii; and 960 completed

interviews in each of the remaining 37 states and the District of Columbia. Consistent with previous designs, the 2014 through 2017 design also oversamples youths aged 12 to 17 and young adults aged 18 to 25. However, the 2014 through 2017 design places more sample in the 26 or older age groups to more accurately estimate drug use and related mental health measures among the aging drug use population. The 2014 sample was allocated to age groups as follows: 25 percent for youths aged 12 to 17, 25 percent for young adults aged 18 to 25, 15 percent for adults aged 26 to 34, 20 percent for adults aged 35 to 49, and 15 percent for adults aged 50 or older.

Although the design of the 2014 survey is similar to the design of the 1999 through 2001 surveys, important methodological differences since 2002 affect the 2014 estimates. As noted above, the survey's name was changed from the National Household Survey on Drug Abuse (NHSDA) to the National Survey on Drug Use and Health (NSDUH) in 2002. In addition to the survey's name change, each NSDUH respondent since 2002 has been given an incentive of \$30. These changes have resulted in an improvement in the survey response rate. The changes also affected respondents' reporting of many critical items that are the basis of prevalence measures reported by the survey each year. Further, the data could have been affected by improved data collection quality control procedures that were introduced in the survey beginning in 2001. In addition, new population data from the 2000 decennial census became available for use in NSDUH sample weighting procedures, resulting in another discontinuity between estimates since 2002 and those prior to 2002. *Analyses of the effects of each of these factors on NSDUH estimates have shown that the 2014 data in this data file should not be compared with 2001 and earlier data to assess changes over time. As noted above, comparisons may be made between 2002 and surveys in subsequent years, including this one.*

However, the 2011 through 2014 NSDUH estimates were based on weights that were poststratified to population control totals based on projections from the 2010 census. In contrast, the weights for the 2002 to 2010 surveys were based on population projections from the 2000 census. Therefore, some caution is advised in interpreting trends in estimates from 2011 onward with estimates from prior years.

A description of the 2014 survey, including more detailed information on sample issues, can be found in several NSDUH documents that present in tabular, graphical, and report formats some key 2014 findings on drug use prevalence and co-occurring mental and substance use disorders by age and major demographic variables:

Changes to NSDUH for 2014

Questionnaire Changes

The following changes were made to the 2014 NSDUH instrument relative to 2013:

- In the core demographics section, the date ranges were revised for two periods of military service in question QD10b. The start date for service in the Vietnam era (response category 4) was changed from August 1964 to March 1961. The corresponding end date for service prior to the Vietnam era (response category 5) was changed from July 1964 to February 1961.
- In the blunts module, the routing logic for question MJMM01 (any use of marijuana in the past 12 months that was recommended by a doctor or other health professional) was updated to include respondents who reported the use of blunts in the past 30 days even if they reported last using marijuana more than 12 months ago in the core marijuana module.
- In the prior substance use module, the routing logic for question LU02 (age at last use of marijuana among respondents who did not use marijuana in the past 30 days) was updated to exclude respondents who reported the use of a blunt in the past 30 days.
- In the health care module, the allowable ranges for reporting heights in inches (questions HLTH08a or HLTH08b) were revised to reflect whether respondents preferred to report their height in feet and inches or only in inches. Similarly, the allowable ranges for reporting heights in centimeters (questions HLTH10a or HLTH10b) were revised to reflect whether respondents changed according to whether respondents preferred to report their height in meters and centimeters or only in centimeters.
- In the health care module, the allowable ranges for reporting weights in pounds (questions HLTH12 and HLTH14) were changed from 50 to 550 pounds to 40 to 999 pounds. Similarly,

the allowable ranges for reporting weights in kilograms (questions HLTH13 and HLTH15) were changed from 22 to 275 kilograms to 18.00 to 999.00 kilograms.

- In the health care module, the logic for HLTH18 (whether respondents were advised by a doctor or other health care professional in the past 12 months to quit smoking cigarettes to quit using other tobacco products) was revised so that only past year tobacco users were asked this question. Previously, lifetime users of tobacco products also were asked this question.
- In the proxy information module, question QP03a (whether another adult proxy might be available) and associated logic were added to identify another available proxy if it had previously been determined that another adult household member could better answer the health insurance and income questions but the potential proxy who was identified during the first cycle of these items was not available or otherwise did not join the interview.

The 2014 specifications may be found on the SAMHSA website (for details, see this codebook's Introduction).

Notable Issues for NSDUH Variables Because of Questionnaire Changes in 2014

As noted previously, changes were made in the core demographics section to the date ranges in question QD10b for active-duty military service during the Vietnam era or service prior to Vietnam to define the start of the Vietnam era as being earlier than it was defined in the 2013 NSDUH (i.e., starting in March 1961 instead of in August 1964). However, the edited variable name in 2013 for service prior to the Vietnam era included a range of years up to 1964 (i.e., ACTD5564). Therefore, the edited variable name for service prior to the Vietnam era was changed from ACTD5564 in 2013 to ACTDB4VN in 2014, where B4VN = "before Vietnam."

In the blunts module, the change to the routing logic for question MJMM01 was determined not to have appreciably affected the distribution of responses for this variable relative to the distribution in 2013. Therefore, the 2013 edited variable name and documentation for MEDMJYR did not change for 2014.

In the health care module, changes to the allowable ranges for the reporting of height and weight had implications for the number of digits that are needed to denote missing values (e.g., "don't know" or "refused"). For example, expanding the allowable range for weight in pounds up to 999 pounds for 2014 would require that codes for missing data be four digits in length and in the 9000 series (e.g., code 9994 for "don't know") to differentiate missing data from allowable values (e.g., 994 pounds). However, the numbers of digits for missing data in the height and weight variables for 2013 took into account the planned changes to these questions for 2014. Consequently, codes for missing data in the height and weight variables had the same number of digits in 2013 and 2014. Although the allowable values for reporting weight were increased in 2014, these changes applied to outliers (i.e., extreme high or low values) rather than to most respondents. Consequently, the edited variable WTPOUNDS for weight in pounds (including conversion of reported weights in kilograms to weights in pounds) that was developed for 2013 continued to be used for 2014.

In the health care module, asking question HLTH18 only of past year tobacco users had been taken into account in developing the edits for the variable HPQTTOB in 2013. Specifically, data in HPQTTOB in 2013 were replaced with a code of 83 (DID NOT USE TOBACCO IN THE PAST 12 MONTHS Logically assigned) if respondents in 2013 were asked HLTH18 but they were not past year users of tobacco products. In 2014, HPQTTOB was assigned a code of 93 (DID NOT USE TOBACCO IN THE PAST 12 MONTHS) for all respondents who were skipped out of HLTH18 because they did not use tobacco products in the past year. However, the logic change for HLTH18 in 2014 did not affect the distribution of the data in the edited variable if respondents reported tobacco use in the past 12 months and they had one or more health care visits in that period. Therefore, the 2013 edited variable name and documentation for HPQTTOB did not change in 2014.

Additional Historical Changes to NSDUH Variables of Note

This section documents notable changes to NSDUH variables that occurred recently but prior to 2014. Consequently, these earlier changes do not affect the comparability of relevant NSDUH variables in 2014 with corresponding variables on the 2013 NSDUH data files or on other NSDUH data files that were subsequent to these changes. However, the changes that are noted in this section could affect comparability of NSDUH variables in 2014 with variables on data files for NSDUH years that were prior to the implementation of these changes.

Since 2008, a statistical model has been employed to predict whether an adult NSDUH respondent had serious, moderate, mild, or no mental illness based on his or her answers to certain NSDUH questions. For the 2012 NSDUH, this model was revised to produce more accurate estimates. This revised 2012 model was used to produce the mental illness estimates for 2012 through 2014. In addition, comparable estimates were recomputed for 2008 through 2011. For more information on how mental illness estimates were calculated, see this codebook's appendix titled Recoded Mental Health Module Variable Documentation. The mental illness variables included in the 2014 NSDUH data files are based on the revised 2012 model. Note that the mental illness variables (e.g., SMIYR_U, AMIYR_U) are not recommended to be used when analyzing variables for past year suicidal thoughts, past year major depressive episode (MDE), the Kessler-6 (K6) distress scale, or the World Health Organization Disability Assessment Schedule (WHODAS), nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, serious psychological distress [SPD], or components used in the K6 or WHODAS scales). For more details, see this codebook's appendix titled Recoded Mental Health Module Variable Documentation.

In the 2013 questionnaire, two new response categories were added to the question about race (QD05) in reaction to new U.S. Department of Health and Human Services (HHS) standards of data collection called for by the Patient Protection and Affordable Care Act of 2010.⁴ The response options now include "Guamanian/Chamorro" and "Samoaan." To accommodate this change, two new imputation-revised variables were created along with their corresponding

⁴ Patient Protection and Affordable Care Act of 2010, Pub. L. No. 111-148, Title II, §§ 2001-2955 (March 23, 2010). Retrieved from <http://www.gpo.gov/fdsys/pkg/PLAW-111publ148/pdf/PLAW-111publ148.pdf>

imputation indicators: IRRACEGC for Guamanian/Chamorro and IRRACESM for Samoan.⁵ The change to QD05 also affected the creation of the "Other Pacific Islander" variable IRRACEPI. Prior to 2013, IRRACEPI covered Pacific Islanders who were not Native Hawaiians. Beginning in 2013, the variable name was changed to IRRACPI2 and now covers Pacific Islanders who are not Native Hawaiians, Guamanians/Chamorros, or Samoans. Despite the change to the questionnaire, the levels of the detailed race variable IRNWRACE were not changed. Guamanian/Chamorro and Samoan respondents continued to be treated as Other Pacific Islanders. Therefore, little to no impact is expected on the race/ethnicity variables IRNWRACE, NEWRACE1, NEWRACE2, EXPRACE, and EXPRACE2.

New questions also were created for the 2013 NSDUH that asked about height and weight. Respondents were asked to report their weight in pounds or kilograms and their height in feet, inches, meters, or centimeters. Edited and recoded variables were created that converted all of the responses from the weight variable into pounds (WTPOUND2) and the height data into inches (HTINCHE2). Using these data, a recoded variable measuring body mass index (BMI2) was included on the 2014 public use file, and the documentation can be found in the Recoded Pregnancy and Health Care section of this codebook. Note that this variable was not used in the 2014 detailed tables or the 2014 mental health detailed tables. The new recoded variable called BMI2 was created as a continuous variable based on the following formula: $BMI2 = [WTPOUND2 \div (HTINCHE2)^2] \times 703$. Unknown response values for the edited weight variable (WTPOUND2) of 9985, 9994, 9997, or 9998 or the edited height variable (HTINCHE2) of 985, 994, 997, or 998 were defined as SAS missing for the recoded BMI2.⁶

Strengths and Limitations of NSDUH

NSDUH is the primary nationally representative source of annual estimates of drug use and mental illness among civilian members of the noninstitutionalized population in the United States. Most of the questions in NSDUH are administered with ACASI, which is designed to provide the respondent with a highly private and confidential mode for responding to questions in order to increase the level of honest reporting of illicit drug use and other sensitive behaviors. In addition, the large and dispersed NSDUH sample enables  not only state-level estimates, but also estimates for substate areas.

Although NSDUH is useful for many purposes, it has certain limitations. First, the data are self-reports of drug use, and their value depends on respondents' truthfulness and memory. Although some experimental studies have established the validity of self-reported data in similar contexts and NSDUH procedures were designed to encourage honesty and recall, some underreporting and overreporting may take place.

Second, the survey is cross-sectional rather than longitudinal. That is, individuals were interviewed only once and were not followed for additional interviews in subsequent years.

⁵ For an explanation of imputation-revised variables, see the section on Statistical Imputation in this codebook introduction.

⁶ The formula for calculating BMI for use in BMI2 is from the Centers for Disease Control and Prevention (CDC) website: http://www.cdc.gov/healthyweight/assessing/bmi/adult_bmi/index.html?s_cid=tw_ob064.

Each year's survey, therefore, provides an overview of the prevalence of drug use at a specific point in time rather than a view of how drug use changes over time for specific individuals.

Third, because the target population of the survey is defined as the civilian, noninstitutionalized population of the United States, a small proportion (approximately 3 percent) of the population is excluded.⁷ The subpopulations excluded are members of the active-duty military and individuals in institutional group quarters (e.g., hospitals, prisons, nursing homes, treatment centers). If the drug use of these groups differs from that of the civilian, noninstitutionalized population, NSDUH may provide slightly inaccurate estimates of drug use in the total population. This may be particularly true for prevalence estimates for rarely used drugs, such as heroin.

Survey Methodology

Like the 1999 to 2013 surveys, the 2014 survey was conducted using CAI methods. This survey also allows for improved state estimates based on minimum sample sizes per state. The target sample size of 67,507 allows SAMHSA to continue reporting adequately precise demographic subgroup estimates at the national level without needing to oversample specially targeted demographics, as was required in the past. The achieved sample size for the 2014 survey was 67,901 individuals.

A coordinated sample design was developed for the 2014 through 2017 NSDUHs. The coordinated design facilitated a 50 percent overlap in third-stage units (area segments [see below]) between each 2 successive years from 2014 through 2017.⁸ This design was intended to increase the precision of estimates in year-to-year trend analyses because of the expected positive correlation resulting from the overlapping sample between successive survey years.

The 2014 design allows for computation of estimates by state in all 50 states plus the District of Columbia. States may therefore be viewed as the first level of stratification and as a reporting variable. Compared with previous sample designs, the 2014 through 2017 sample design moves from two to essentially five state sample size groups (lumping Hawaii with the remaining states and the District of Columbia). The 2014 through 2017 surveys have a sample designed to yield 4,560 completed interviews in California; 3,300 completed interviews each in Florida, New York, and Texas; 2,400 completed interviews each in Illinois, Michigan, Ohio, and Pennsylvania; 1,500 completed interviews each in Georgia, New Jersey, North Carolina, and Virginia; 967 completed interviews in Hawaii; and 960 completed interviews in each of the remaining 37 states and the District of Columbia—for a total national target sample size of 67,507. The sample is selected from 6,000 area segments that vary in size according to state.

⁷ Information from the 2010 census suggests that the civilian, noninstitutionalized population includes at least 97 percent of the total U.S. population. See the following reference: Lofquist, D., Lugaila, T., O'Connell, M., & Feliz, S. (2012, April). *Households and families: 2010* (C2010BR-14, 2010 Census Briefs). Retrieved from <https://www.census.gov/prod/cen2010/briefs/c2010br-14.pdf>

⁸ In segments used in 2 successive years, only addresses not sampled in the first year may be included in the second year's sample.

The change in the state sample allocation was driven by the need to increase the sample in the original 43 small states (to improve the precision of state and substate estimates in these states) while moving closer to a proportional allocation in the larger states.

Stratification and Selection of Primary, Secondary, and Tertiary Sampling Units (Census Tracts, Census Block Groups, and Area Segments)

Within each state, sampling strata called state sampling regions (SSRs) were formed. Based on a composite size measure, states were partitioned geographically into roughly equally sized regions. In other words, regions were formed such that each area within a state yielded, in expectation, roughly the same number of interviews during each data collection period. The partitioning divided the United States into a total of 750 SSRs, resulting from 36 SSRs in California; 30 SSRs each in Florida, New York, and Texas; 24 SSRs each in Illinois, Michigan, Ohio, and Pennsylvania; 15 SSRs each in Georgia, New Jersey, North Carolina, and Virginia; and 12 SSRs each in the remaining 38 states and the District of Columbia.

Similar to the 2005 through 2013 surveys, the first stage of selection for the 2014 through 2017 NSDUHs was census tracts. The first stage of selection began with the construction of an area sample frame that contained one record for each census tract in the United States. If necessary, census tracts were aggregated within SSRs until each tract⁹ met the minimum dwelling unit¹⁰ (DU) requirement. In California, Florida, Georgia, Illinois, Michigan, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Texas, and Virginia, this minimum size requirement was 250 DUs in urban areas and 200 DUs in rural areas.¹¹ In the remaining states and the District of Columbia, the minimum requirement was 150 DUs in urban areas and 100 DUs in rural areas. These census tracts served as the primary sampling units (PSUs) for the coordinated 4-year sample.

Before selecting census tracts, additional implicit stratification was achieved by sorting the first-stage sampling units by a CBSA/SES¹² (core-based statistical area/socioeconomic status) indicator¹³ and by the percentage of the population who are non-Hispanic and white. From this well-ordered sample frame, 48 census tracts per SSR were selected with probabilities proportionate to a composite size measure and with minimum replacement.

⁹ For the remainder of the discussion, first-stage sampling units are referred to as "census tracts" even though each first-stage sampling unit contains one or more census tracts.

¹⁰ DU counts were obtained from the 2010 decennial census data supplemented with revised population counts from Nielsen Claritas, which is a market research firm headquartered in San Diego, California (see <http://www.claritas.com/sitereports/Default.jsp>).

¹¹ The basis for the differing minimum DU requirement in urban and rural areas is that it is more difficult to meet the requirement in rural areas, 100 DUs are sufficient to support one field test and two main study samples in the smaller states, and 200 DUs are sufficient to support three samples in the larger sample states.

¹² CBSAs include metropolitan and micropolitan statistical areas, as defined in the following reference: Office of Management and Budget. (2009, December 1). *OMB Bulletin No. 10-02: Update of statistical area definitions and guidance on their uses*. Retrieved from <https://www.whitehouse.gov/sites/default/files/omb/assets/bulletins/b10-02.pdf>

¹³ The CBSA/SES indicator was defined using 2006-2010 American Community Survey (ACS) estimates, 2010 census data, and the December 2009 CBSA definition. Four categories are defined as follows: (1) CBSA/low SES, (2) CBSA/high SES, (3) non-CBSA/low SES, and (4) non-CBSA/high SES.

For the second stage of selection, adjacent census block groups were collapsed as needed within selected census tracts. Compared with prior years, the selection of census block group is an additional stage of selection that was added to facilitate possible transitioning to an address-based sample (ABS) design in the future. The block groups were required to have the same minimum number of DUs as the census tracts from which they were selected (150 or 250 in urban areas and 100 or 200 in rural areas, according to state). The resulting block groups were then sorted in the order in which they were formed, and one census block group¹⁴ was selected per selected census tract with probability proportionate to a composite size measure.

Because census block groups generally exceed the minimum DU requirement, one smaller geographic area was selected within each sampled census block group. For this third stage of sampling, each selected census block group was partitioned into small geographic areas composed of adjacent census blocks. These geographic clusters of blocks are referred to as *segments* and are the tertiary sampling units (TSUs) for the coordinated sample design. A sample *dwelling unit* in NSDUH refers to either a housing unit or a group quarters listing unit, such as a dormitory room or a shelter bed. To support the overlapping sample design and any special supplemental samples or field tests that SAMHSA might wish to conduct, segments were formed to contain a minimum of 150 or 250 DUs in urban areas and 100 or 200 DUs in rural areas, according to state.

One segment was selected within each sampled census block group with probability proportionate to size. The 48 selected segments then were randomly assigned to a survey year and quarter of data collection.

Selection of Dwelling Units

The primary objective of the fourth stage of sample selection (listing units) was to select the minimum number of DUs needed in each segment to meet the targeted sample sizes for all age groups. For the 2014 through 2017 NSDUHs, each state sample will be allocated to age groups as follows: 25 percent for youths aged 12 to 17, 25 percent for young adults aged 18 to 25, 15 percent for adults aged 26 to 34, 20 percent for adults aged 35 to 49, and 15 percent for adults aged 50 or older. In the 2005 through 2013 NSDUHs, the sample was allocated equally across the 12 to 17, 18 to 25, and 26 or older age groups. The 2014 through 2017 design places more sample in the 26 or older age groups to estimate drug use and related mental health measures more accurately among the aging drug use population. The size measures used in selecting the area segments were coordinated with the DU and person selection process so that a nearly self-weighting sample could be achieved in each of the five age groups. Departures from the self-weighting objective occurred for several reasons, including the following: (a) advance projections on the number of DUs did not accurately reflect the current housing inventory; (b) maximum DU sample sizes were preset to control the interviewer workload and to allow unused addresses to be available for the next year's survey; and (c) the person selection probabilities were constrained so that no more than two individuals could be selected per DU. An iterative sample allocation process was followed to adjust for these additional constraints.

¹⁴ For the remainder of the discussion, second-stage sampling units are referred to as "census block groups" even though each second-stage sampling unit contains one or more census block groups.

In addition, the DU sample allocation in each area segment was adjusted to allow for DU eligibility, for screening nonresponse, and for person nonresponse.

In advance of the survey period, specially trained listers had visited each area segment and listed all addresses for housing units and eligible group quarters units in a prescribed order. Systematic sampling was used to select the allocated sample of addresses from each segment.¹⁵

Selection of Individuals

During each quarterly survey, field interviewers (FIs) visited each sample address to determine DU eligibility, to list all eligible individuals at the address, to select the sample of individuals to be interviewed, and to conduct interviews. Unlike the 2005 through 2013 NSDUHs, the "half-open" interval (HOI) rule was not implemented in the 2014 NSDUH. This special procedure identified any new (since the time of listing) housing units or any DUs missed during the advance listing process. Any new or missed DUs following immediately after a sample DU and up to, but not including, the next initially listed address in the prescribed order of listing also were included in the sample. Eliminating the HOI rule in 2014 decreased the burden on interviewers and simplified training and the screening process. This decrease in burden outweighed the small amount of coverage afforded by the HOI rule. Because the majority of missed DUs are found on the premises of sampled DUs, the 2014 NSDUH had in place a procedure for checking for and adding missed DUs on the premises of sampled DUs. During the screening interview, FIs asked the screening respondent about other units on the property of the selected DU. If missing from the original list, these DUs also were included in the sample.

The FIs used a handheld computer to record the results of the DU screening process and to select the sample of respondents. They recorded the results of each call, the final eligibility status of the DU, and information on new and missed DUs. If a sample address was an eligible occupied DU, the FIs also conducted a screening interview to identify and roster all survey-eligible individuals residing at the address. When the roster was complete, the computer was programmed to select the sample of individuals to be interviewed using parameters specified for that area segment and a random number specified for that address.

Data collection progress was monitored during each quarterly survey by state. Small reserve samples were held back each quarter so that the assigned sample size could be adjusted if necessary during the course of data collection.

Sample Design Variables

The sample for the 2014 NSDUH was selected using a multistage, deeply stratified sample design. The variables on the full restricted-use analytic data file represent each stage of

¹⁵ This had the effect of creating noncompact clusters (selection from a list), which differ from compact clusters in that not all units within the cluster are included in the sample. Although compact cluster designs are less costly and more stable, a noncompact cluster design was used because it provides for greater heterogeneity of dwellings within the sample. Also, social interaction (contagion) among neighboring dwellings is sometimes introduced with compact clusters. See the following reference: Kish, L. (1965). *Survey sampling*. New York, NY: John Wiley.

sample selection (note that, to ensure the confidentiality of survey respondents, the sample design variables described in this section are not included on the public use file):

- Stage 1: The 2014 CAI design includes a sample from each of the 50 states plus the District of Columbia. SSRs were formed within each state based on composite size measures, roughly geographically partitioning the state into equally sized regions. A sample of 48 census tracts was selected within each SSR. Census tracts are considered the PSU and can be identified using the STATE, SSREGION, and SEGID¹⁶ variables. Only eight census tracts per SSR were used for the 2014 sample.
- Stage 2: For the second stage of selection, adjacent census block groups were aggregated within selected census tracts as necessary to form the second-stage sampling units. One census block group was selected per sampled census tract. A total of 48 census block groups was selected within each SSR. Census block group can be identified using the STATE, SSREGION, and SEGID variables. Eight census block groups per SSR, one from each sampled census tract, were used for the 2014 sample.
- Stage 3: The third stage of sampling consisted of partitioning the selected census block groups into smaller geographic areas, called "segments." Segments are defined by joining contiguous census blocks within each selected census block group and are similar to the units selected at the second stage of selection for the 2005 through 2013 surveys. Segments can be identified on the full restricted-use analytic data file¹⁷ using the SEGID variable.
- Stage 4: After census tracts, census block groups, and segments were selected, the fourth stage of selection consisted of selecting DUs within each segment. The DU selection rate was based on the state to which a particular segment belonged. State classification was utilized for computation of eligibility, screener and interview response rates, and expected person yield per DU. State classifications can be identified with the STATE variable, and DUs can be identified with the ENCCASE variable.
- Stage 5: At the last stage of selection, individuals were selected within screened DUs based on the age group composition of the DU residents. The person-level variable used to determine the selection included AGE. The full restricted-use analytic data file contains one record representing each responding selected person from stage 5 (67,901 individuals). To protect the confidentiality of these respondents, the full analytic file was treated using a statistical disclosure limitation method while ensuring that the data continue to be representative of civilian members of the noninstitutionalized population in the United States. The resulting public use data file contains 55,271 records.

¹⁶ One segment was selected from each sampled census block group within each sampled census tract, so the census tract, census block group, and segment can be identified by the SEGID variable.

¹⁷ NSDUH's Restricted-use Data Analysis System (R-DAS) data files are available online at <http://www.datafiles.samhsa.gov>. R-DAS is an online analytic system that allows analysts to produce cross-tabulations using restricted-use NSDUH data files. Restricted-use microdata are not accessible to analysts, but output from the analyses is available as long as the output does not violate any of the disclosure limitation rules that determine what output may be displayed.

A more detailed explanation of the sample design and sample selection procedures at each stage of the design appears in the *2014 NSDUH Methodological Resource Book*, which will be available in early 2016.¹⁸

Data Collection and Response Rates

The fieldwork for the 2014 NSDUH was directed by RTI staff members. RTI maintained a field staff of approximately 700 FIs to collect the data.

As noted above, a total final sample of 67,901 CAI interviews was obtained for the 2014 survey. Strategies for ensuring high rates of participation resulted in a weighted screening response rate of 81.94 percent and a weighted interview response rate for the CAI of 71.20 percent.

Throughout the course of the study, respondent anonymity and the privacy of responses were protected by separating identifying information from survey responses. Respondents were assured that their identities and responses would be handled in strict compliance with federal law. As discussed above, the questionnaire itself and the interviewing procedures were designed to enhance the privacy of responses, especially during segments of the interview in which questions of a sensitive nature were posed. Answers to sensitive questions were gathered using ACASI. During the ACASI portions of the interview, respondents listened to prerecorded questions through headphones and entered their responses directly into a computer without interviewers knowing how they were answering. At the conclusion of the ACASI section, the interview returned to the CAPI mode with the interviewer completing the questionnaire. Each respondent who completed a full interview was given \$30 in cash as a token of appreciation for his or her time.

A more detailed explanation of NSDUH's data collection procedures appears in the *2014 NSDUH Methodological Resource Book*, which will be available in early 2016.¹⁹

Sample Weights

The estimates yielded by NSDUH are based on sample survey data rather than on complete data for the entire population. This means that the data must be weighted to obtain unbiased estimates for survey outcomes in the population represented by the 2014 NSDUH. The "final analysis weight" of the i^{th} respondent, say w_i , can be interpreted as the number of sampling units in the NSDUH target population represented by the i^{th} respondent. The sum of the weights over all respondents is used to estimate the size of the total target population:

$$\sum_i w_i = \text{estimated size of target population},$$

where the summation is over all respondents in the 2014 NSDUH.

¹⁸ Center for Behavioral Health Statistics and Quality. (in press). *2014 National Survey on Drug Use and Health: Methodological resource book*. Rockville, MD: Substance Abuse and Mental Health Services Administration.

¹⁹ See footnote 18.

Similar to the 2013 NSDUH, three sets of analysis weights at the person level, questionnaire dwelling unit (QDU) level, and person pair level were developed for the 2014 NSDUH. The person-level, QDU-level, and person pair-level analysis weights shared the same first 11 weight components at the screening dwelling unit (SDU) level. In addition to the 11 common weight components, QDU-level and person pair-level analysis weights had several specific weight components, and the final weights are the product of all the weight components. As in the 2013 NSDUH, all of the adults in the 2014 NSDUH sample received the WHODAS questions. Therefore, there was no need to have a separate adult mental health weight in the 2014 NSDUH because the person-level analysis weight could be used to produce the adult mental health estimates.

The person-level analysis weights (ANALWT_C) are the product of 16 weight components. Each weight component accounts for either a selection probability at a selection stage or an adjustment factor adjusting for nonresponse, coverage, or extreme weights. The sum of the weight over all respondents on the data file represents an estimate of the total number of individuals in the target population. In view of the use of weights as expansion factors in forming estimates, the weight can be interpreted as representing the total number of target population individuals each record on the file represents. For variance estimation, suitable software, such as SUDAAN®, should be used to take the sample design into account.²⁰ Similar to the 2013 NSDUH, the 2014 NSDUH used 2010 census-based population estimates in the poststratification adjustment.

Details of the weight components and the sample weighting procedures appear in the *2014 NSDUH Methodological Resource Book*, which will be available in early 2016.²¹

Organization of the Data File

The file described here is made available as an ASCII file with 3,148 variables and 55,271 observations. Three program files are made available to read the ASCII file into SAS, SPSS, or Stata. The file also is made available as a SAS transport (CPORT) file, SPSS system file, Stata system file, and ASCII tab-delimited file. All of the data and program files are available from SAMHDA at <http://www.datafiles.samhsa.gov>.

The overall organization of the file is shown in the Table of Contents of this document. Edited data from core drug modules make up the first portion of the file. Edited data from the noncore self-administered modules and demographic questions are in later sections. Variables from the noncore section contain missing data; see the section on Standard Code Conventions for a description of the codes given to different types of missing data. For each edited variable, the number of observations assigned a given missing data code is shown in the entry for that variable.

Imputation-revised drug use variables, as well as selected recoded versions of these variables, are included for core drug use variables. These imputed and recoded drug use variables are in separate sections following the edited core drug use variables. The recoded drug use

²⁰ In SUDAAN, the sample design is specified using the NEST statement. See the following reference: RTI International. (2012). *SUDAAN®, Release 11.0* [computer software]. Research Triangle Park, NC: Author.

²¹ See footnote 18.

variables include indicators for lifetime, past year, and past month substance use. The imputation-revised core drug use variables served as the starting point for the recoded core drug use variables. Imputation-revised core and noncore demographic variables also are included toward the end of the codebook. Missing values for all imputation-revised variables from the core drug modules have been imputed using the statistical imputation procedures described below. Imputation indicators are provided for each variable so that users may easily determine whether an observation contains data from the questionnaire or an imputed value. *Where imputed or recoded variables are provided, users are encouraged to use them to produce estimates rather than raw or edited variables from the interview.*

Edited variables from self-administered noncore modules comprise the next major section in the codebook. Intermixed between the noncore and core sections of the codebook are sections of recoded variables. The edited and/or imputed variables are used as source variables for the recoded variables. For example, edited variables from the section of the interview pertaining to symptoms of dependence or abuse (Substance Dependence and Abuse section in this codebook) were used to create recoded summary measures of dependence. Unlike variables in the core sections, however, imputation for missing data generally was not done prior to the recoding of noncore variables. Consequently, noncore recoded variables may still have missing values. The missing data codes contained in the source variables and defined in the Standard Code Conventions section of this codebook introduction are recoded to the standard missing code (.) for recoded variables. It is intended that cases containing these missing codes be excluded from an analysis.

Within the recoded sections of the codebook, detailed information is provided in the variable documentation about how levels of source variables are used to define recoded variables. Note that for recoded variables that include other-specify data or logically assigned data (as defined in the Standard Code Conventions section of this introduction), values may be listed in the documentation that do not exist for the current survey year. Because of fluctuations in the data, source variable values may not exist consistently across years. However, to aid in cross-year analyses, all possible source variable values have been retained in the documentation. For example, a recoded variable may document a "Yes" using both source variable values of 1 = Yes and 3 = Logically Assigned Yes, even if the 3 is not applicable for the current survey year. To alert users, notes have been placed at the top of recoded sections that contain variables that include source values even if they do not apply to the current survey year.

In many instances, the codebook itself also indicates in parentheses the question names that were most relevant for creating an edited variable. In particular, an important feature of the transition to CAI in 1999 was that respondents could be routed to different versions of a question based on prior information from the interview. As much as possible, the codebook shows key source variables that were used in creating edited, imputed, or recoded variables. For example, respondents who initiated use of a drug within 1 year of their current age were asked more

detailed questions about the year and month in which they first used that drug. Depending on their age, date of birth, and interview date, respondents could be routed to one of three possible questions to identify the year in which they first used a drug (e.g., CG04a, CG04b, or CG04c for cigarettes). Similarly, respondents could be routed to one of two possible questions to determine the month in which they first used a drug (e.g., CG04c and CG04d for cigarettes). To facilitate analyses, therefore, responses from these multiple year-of-first-use and month-of-first-use questions were combined into one single year-of-first-use variable and one single month-of-first-use variable for each drug, as shown for the variables CIGYFU and CIGMFU. For the most complete information about the logic for asking questions in the interview, however, data file users should refer to the questionnaire (for details, see this codebook's Introduction).

Usable Cases

A key step in the data processing procedures established the minimum item response requirements in order for cases to be retained for weighting and further analysis (i.e., "usable" cases). These procedures were designed to eliminate cases with unacceptable levels of item nonresponse (i.e., missing data), thereby retaining cases with lower levels of missing data and reducing the amount of statistical imputation needed for any given record.

The usable case criteria established for CAI were based on the completeness of information that respondents provided about their lifetime use or nonuse of different drugs. In CAI, respondents were asked more detailed questions about different drugs only if they reported lifetime use of that drug (or lifetime use of one or more drugs within a broader category, such as hallucinogens) on an initial "gate" question.²² Consequently, whether a CAI respondent was a lifetime user or nonuser of the drugs of interest could be readily determined by reviewing the respondent's answers to the gate question on lifetime use of that drug (or category of drugs).

The requirements for a CAI record to be considered usable are noted as follows:

1. The lifetime cigarette question (i.e., "Have you ever smoked part or all of a cigarette?") had to have been answered as "yes" or "no." This requirement was set so that lifetime use or nonuse would be fully defined for at least one substance. Consequently, data about lifetime use or nonuse of cigarettes could be used in subsequent statistical imputations for other drugs where lifetime use or nonuse was undefined.
2. Responses to questions on at least nine (9) of the following additional drugs had to contain information about lifetime use or nonuse: (a) chewing tobacco, (b) snuff, (c) cigars, (d) alcohol, (e) marijuana, (f) cocaine (in any form), (g) heroin, (h) hallucinogens,

²² In all modules except those pertaining to hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives, the logic for asking more detailed questions about use of that drug was based on the answer to a single "yes/no" question (e.g., "Have you ever, even once, used marijuana or hashish?"). In the hallucinogens through sedatives modules, the logic for asking more detailed questions about use of that category of drugs was based on respondents' answers to multiple "yes/no" questions about the lifetime use or nonuse of specific drugs within that category (e.g., lifetime use or nonuse of the specific hallucinogens lysergic acid diethylamide [LSD], phencyclidine [PCP], peyote, mescaline, psilocybin/mushrooms, Ecstasy [3,4-methylenedioxymethamphetamine, MDMA], or "any other" hallucinogen).

(i) inhalants, (j) pain relievers, (k) tranquilizers, (l) stimulants, and (m) sedatives. Crack cocaine was not included in the usable case rule because the logic for asking about crack cocaine was dependent upon the respondent having answered the lifetime cocaine question as "yes." Although the CAI instrument also asked about pipe tobacco, this was not included in the usable case rule because there was only one other question about pipe tobacco in addition to the lifetime pipe tobacco use question.²³

The interview also included follow-up probes for respondents who initially refused to answer a gate question or an entire series of gate questions. Follow-up probes were included in the following modules that were relevant to the usable case rule: cigarettes, chewing tobacco, snuff, cigars, alcohol, marijuana, cocaine, heroin, specific hallucinogens (i.e., LSD, PCP, and Ecstasy [MDMA]), the specific stimulant methamphetamine, and any use of inhalants, pain relievers, tranquilizers, stimulants, or sedatives (if respondents refused all lifetime use questions about these latter five drug categories). If respondents changed their initial refusal to a response of "yes" or "no," they were considered to have provided usable data to that drug's gate information.

For the hallucinogens through sedatives sections, respondents reported about use or nonuse of specific drugs within that category. For these sections, the requirement for reporting of lifetime use or nonuse was considered to have been satisfied if at least one lead lifetime question in the series was answered as "yes" or "no" (e.g., if at least one question in the hallucinogens series was answered as "yes" or "no" for hallucinogens). Similarly, in the inhalants, pain relievers, tranquilizers, stimulants, and sedatives sections, if respondents initially refused to answer all gate questions for a given drug but subsequently answered that drug's follow-up probe as "yes" or "no," they were considered to have satisfied the reporting requirement for that drug.

In addition, the CAI program terminated interviews during the initial demographics questions if respondents were ineligible for the survey (i.e., under age 12 or on active duty in the U.S. military). These ineligible cases by definition did not meet the usable case criteria because the interviews were terminated before the respondents were asked the first cigarette use question.

Logical Editing

For selected key variables, response data were reviewed to identify and address inconsistent data among related variables or to replace missing data with nonmissing values. The routing logic in the CAI instrument reduced the opportunities for respondents to give inconsistent answers by skipping respondents past questions that did not apply to them. The occurrence of inconsistent data was reduced further through the use of consistency checks built into the CAI program that prompted respondents to resolve inconsistencies between related items. Nevertheless, there still were limited situations in which respondents could answer one question in a manner that was inconsistent with their answer to a previous question.

²³ For a more detailed discussion of the development of the usable case requirements, see the following reference: Kroutil, L., & Myers, L. (2002). Development of editing rules for CAI substance use data. In J. Gfroerer, J. Eyerman, & J. Chromy (Eds.), *Redesigning an ongoing national household survey: Methodological issues* (HHS Publication No. SMA 03-3768, pp. 85-109). Rockville, MD: Substance Abuse and Mental Health Services Administration, Office of Applied Studies.

Logical editing was the first step in processing many of the variables on the file. This procedure used data within a respondent's record to identify and address inconsistencies among related variables within a given module of the interview (e.g., within the hallucinogens section). As part of this procedure, variables were identified that had been legitimately skipped because the condition(s) for asking the questions did not apply.

As a general principle, responses from one module (e.g., hallucinogens) were not used to edit variables in another module (e.g., inhalants).²⁴ For this reason, data in one module may not be completely consistent with data in other modules. Subsequent discussion about editing in this section focuses on key drug use variables.

Editing Procedure for Drug Use Variables

Logical editing and processing of drug use variables in the tobacco through the sedatives modules first involved identifying whether respondents had ever used or never used the drug of interest. That included situations in which respondents initially refused to answer a question about their lifetime use of a drug but then changed their answer to "yes" or "no" on follow-up. If respondents did not provide sufficient information about their use or nonuse of a particular drug (or drug category), their final status was assigned through statistical imputation procedures. If values pertaining to lifetime use or nonuse of a given drug were changed through the editing procedures, this editing was indicated through special codes that indicated that a response was logically inferred; documentation for these codes includes the phrase "LOGICALLY ASSIGNED." In the hallucinogens, inhalants, pain relievers, tranquilizers, stimulants, and sedatives modules, for example, respondents who did not report lifetime use of a specific drug (e.g., LSD) but specified use of it as "some other drug" were logically inferred to be lifetime users of that drug. In the psychotherapeutics modules (i.e., pain relievers, tranquilizers, stimulants, and sedatives), respondents whose only reported lifetime use involved over-the-counter medications were logically inferred to have never used that particular prescription-type psychotherapeutic drug.

After lifetime use or nonuse of a given drug had been determined, edits of the variables that established when respondents last used a drug of interest were probably the most critical. These edited recency-of-use variables were the precursors for the final, imputed measures that established the prevalence of use in the past 30 days, past 12 months, and lifetime.

The interview included follow-up probes for respondents who were lifetime users of a given drug but did not know or refused to report when they last used it. Respondents who initially did not know when they last used a drug were asked to give their "best guess" of when they last used it. Respondents who initially refused to report when they last used a drug were asked to reconsider answering the question. If respondents changed their initial answer of "don't know" or "refused" in response to these probes, the editing procedures incorporated data from

²⁴ One exception to the principle of not editing across modules involved situations in which responses in one module governed whether respondents were asked questions in another module. For example, if respondents reported never using heroin but they received substance abuse treatment in the past 12 months, they were not asked questions in the noncore substance treatment module about current or past year treatment for heroin. Consequently, codes could be assigned to indicate that the respondents skipped out of the heroin treatment data because they had never used it.

these probes into the final, edited recency-of-use variables. For example, if respondents initially refused to report when they last used a drug but then reported last using it more than 30 days ago but within the past 12 months, their edited recency indicated use in that period, in the absence of any information that was inconsistent with what they reported in the probe (see below).

Situations were identified and flagged in which there were inconsistencies between a respondent's answer to a drug's recency question (or the answer in a follow-up probe) and other data in that module. For example, it would be inconsistent for a respondent to report last using a drug "more than 12 months ago" but also to report having first used it at his or her current age. These inconsistencies then were addressed by statistically imputing final values for the affected recency variable and the other variable(s) where the data were inconsistent with the respondent's original answer to the recency question.

Again, if values pertaining to the period when respondents last used a drug were changed through the editing procedures, special codes were assigned to indicate that these edits had been done. The documentation for these codes included the phrase "LOGICALLY ASSIGNED." For example, a code of 8 in a drug's recency-of-use variable means "Used at some point in the past 12 months LOGICALLY ASSIGNED." Specifically, if a respondent reported using a drug more than 30 days ago but within the past 12 months but other data suggested that the respondent may have used the drug more recently, this code of 8 indicated that at least it could be inferred that the respondent was a user in the past 12 months (and potentially more recently). Similarly, a code of 9 ("Used at some point in lifetime LOGICALLY ASSIGNED") indicated that the respondent was potentially a user in any period that was asked about for that particular drug, including the past 30 days. In particular, respondents were assigned a code of 9 if they initially answered "don't know" or "refused" to a drug's recency question and continued on follow-up to answer "don't know" or "refused" regarding when they last used it.

Details of the editing procedures for the drug use variables in 2014 will appear in the *2014 NSDUH Methodological Resource Book*, which will be available in early 2016.²⁵

Standard Code Conventions

Generally, the following codes have the same (or consistent) meanings across all variables. Exceptions are noted in the documentation for individual variables.

| | |
|-------------------------|--|
| 91 or 991 or 9991, etc. | = NEVER USED [DRUG(s) OF INTEREST] |
| 93 or 993 or 9993, etc. | = USED [DRUG] BUT NOT IN THE PERIOD OF INTEREST |
| 94 or 994 or 9994, etc. | = DON'T KNOW |
| 97 or 997 or 9997, etc. | = REFUSED |
| 98 or 998 or 9998, etc. | = BLANK (i.e., not answered; not asked the question) |
| 99 or 999 or 9999, etc. | = LEGITIMATE SKIP |

²⁵ See footnote 18.

The following analogous codes also were assigned as part of the logical editing process:

| | |
|----------------------------|--|
| 81 (or 981, 9981, etc.) | = NEVER USED [DRUG(s) OF INTEREST] Logically assigned |
| 83 (or 983, 9983, etc.) | = USED [DRUG] BUT NOT IN THE PERIOD OF INTEREST Logically assigned |
| 85 (or 985, 9985, etc.) | = BAD DATA Logically assigned (i.e., usually inconsistent with other data) |
| 89 (or 989, or 9989, etc.) | = LEGITIMATE SKIP Logically assigned |

The codes of 81, 83, 85, and 89 were given values in the 80s to signify that existing values were overwritten during editing. For example, if a respondent was somehow routed into the youth experiences module but that respondent was subsequently classified as being 18 or older, any answers that the respondent gave in the youth experiences module were overwritten with codes of 89 (or 989, etc.). These codes signify that this adult respondent logically was not eligible to be asked the youth experiences questions.

Codes of 85 (or 985, etc.), 94 (or 994, etc.), 97 (or 997, etc.), and 98 (or 998, etc.) are codes for missing data. In particular, codes of 98 (i.e., blank) could occur in the data for the following reasons:

- the respondent broke off the interview before reaching a particular question or section;
- the CAI program allowed the respondent to hit the ENTER key without providing a response (typically, in situations where respondents were asked to specify something, such as the name of some other drug that they had used); or
- the CAI program skipped the respondent past a question, but there was some uncertainty as to whether the skipped question applied or did not apply to the respondent (e.g., if subsequent questions about a drug were skipped because the respondent did not know whether he or she ever used that drug).

Statistical Imputation

Statistical imputation refers to the substitution of acceptable estimated values for missing values. These imputed values cannot be directly distinguished from nonimputed values. Using statistical imputation, missing data were replaced with nonmissing values for selected variables. These variables can be identified in the codebook by their labels, within which can be found the words "IMPUTATION REVISED." In addition, most imputation-revised variables have names with the prefix "IR." (The imputation-revised employment status variable EMPSTATY is an exception to this rule. Also, although no missing data are possible for gender, the "IR" prefix for IRSEX is maintained for continuity with past years.) Associated indicator variables tell the user which values are imputed and which ones are not. These indicator variables have the words "IMPUTATION INDICATOR" in their labels and are identified with the prefix "II." For some imputation-revised variables, additional imputation indicators are available, identified with the prefix "II2," giving more details about the source of the imputed or logically assigned value.

In most cases, the imputation-revised variable can be traced to a specific question in the questionnaire. However, the imputation-revised variable occasionally corresponds to an edited variable that was derived from several questions in the questionnaire.

With the 2014 survey, the core drug use variables are recency of use, frequency of use in the past 12 months, frequency of use in the past 30 days, and age at first use. Age of first daily cigarette use and binge drinking frequency²⁶ in the past 30 days are also core drug use variables. Imputation of missing values in these core drug use variables was accomplished using an imputation procedure developed specifically for the survey in 1999 and called predictive mean neighborhood (PMN), which is a combination of model-assisted and nearest neighbor hot-deck imputation methods. The PMN method also was used in the 2014 survey to impute missing values in the core demographic, employment status, immigrant status, income, insurance, and roster-derived household composition variables, as well as variables associated with responding pairs. One group of variables for which the PMN method was not used is nicotine dependence. Instead, a weighted least squares regression was used to obtain continuous predicted means, which in turn were used directly as imputed values for this set of variables. More details on the methods used for imputation appear in the *2014 NSDUH Methodological Resource Book*, which will be available in early 2016.²⁷

For all imputation-revised variables except those associated with nicotine dependence, the levels within the variables are limited to the valid responses in the interview itself. If neither editing nor imputation was required for any of these variables, the levels for the edited and imputation-revised variables are the same, with each level corresponding to a valid interview response. If an edited variable has a logically assigned value for which no imputation was required, that logically assigned value was converted to the associated valid interview response in the imputation-revised variable. Finally, levels in the edited variable that do not correspond to a valid interview response indicate that the information available for that respondent was incomplete and, consequently, imputation was required. In the imputation-revised variable, these levels were replaced by imputed values corresponding to valid interview responses, which were made consistent with any preexisting information related to that variable. Examples of levels indicating incomplete information include "bad data," "don't know," and "refused." Also, in the case of recency of use, some levels in the edited variable describe a more general recency than was designated from a valid interview response, which, in the imputation-revised variable, were replaced by imputed values consistent with the general recency level.

Imputation Indicators

For each variable that includes imputed values, concomitant indicator variables distinguish imputed from nonimputed values. These associated variables have names nearly identical to the imputation-revised variables, except that the IR prefix was replaced by an II or an II2. In general, the imputation indicator variables with the II prefix have three levels:

²⁶ Binge alcohol use is defined as drinking five or more drinks on the same occasion (i.e., at the same time or within a couple of hours of each other) on at least 1 day in the past 30 days. Heavy alcohol use is defined as drinking five or more drinks on the same occasion on each of 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

²⁷ See footnote 18.

- 1** = From interview
- 2** = Logically assigned
- 3** = Statistically imputed.

These levels indicate whether the imputation-revised variable's value originated from interview responses, was logically assigned in the editing process, or was imputed. In some cases, the skip logic inherent in the CAI prevented a respondent from answering certain questions because of his or her responses to previous questions. For the drug use variables, if a respondent had been skipped out of a question, the response in the imputation-revised variables is coded as "never used" or is coded to indicate that the respondent had not used in the relevant time period. For other variables where this occurred, the imputation-revised variable has a level with a label indicating a legitimate skip. The imputation indicators associated with these variables also have an additional level, which likewise has a label indicating a legitimate skip. Typically, this level is given as 9 (= Legitimate skip), often with an accompanying explanation for the skip.

The variables that have an additional set of imputation indicators, as denoted by the prefix "II2," are IRHOGRP4, EMPSTAT4, EMPSTATY, and the recency and frequency of drug use variables. For IRHOGRP4, the II2 variable is simply a more detailed description of the sources of information for these variables. For EMPSTAT4 and EMPSTATY, the II2 variables provide more details about the constraints on imputed values, where the legitimate skip levels are equivalent to those given by the II variables. The drug use II2 variables are a result of the implementation of the flag-and-impute editing procedures on the recency-of-use data. Greater details on these editing procedures are given in the Logical Editing section in this introduction. With these editing procedures, inconsistent responses in the recency-of-use variables were replaced by more general, consistent responses. Subsequently, the specific responses then were imputed. If the response from a recency-of-use variable was considered partially known, such as past year use of a given drug with the more specific recency unknown, imputed values had to be limited to what was consistent with this incomplete information. The types of partial information available for a given variable are as follows:

- 8** = Used at some point in the past 12 months LOGICALLY ASSIGNED
- 9** = Used at some point in lifetime LOGICALLY ASSIGNED
- 14** = Used more than 12 months ago LOGICALLY ASSIGNED
- 19** = Used more than 30 days ago LOGICALLY ASSIGNED
- 29** = Used more than 30 days ago but in the past 3 years LOGICALLY ASSIGNED
- 39** = Used within the past 3 years LOGICALLY ASSIGNED.

The last four levels (14, 19, 29, and 39) are for tobacco product use only. In the imputation indicator for drug use variables, level 3 indicates statistical imputation, but no detail is given regarding any available partial information. The II2 variable breaks out the II level 3 into the following levels:

- 3** = Statistically imputed data - lifetime use imputed
- 4** = Statistically imputed data - edited recency = 9

- 5 = Statistically imputed data - edited recency = 8
- 6 = Statistically imputed data - edited recency = 19
- 7 = Statistically imputed data - edited recency = 14
- 8 = Statistically imputed data - edited recency = 29
- 9 = Statistically imputed data - edited recency = 39.

Constraints and Consistency

The imputation of missing values in the core demographics and drug use variables was subject to numerous constraints to ensure that imputed values would be consistent with preexisting, nonmissing values. For multivariate analyses, the imputation-revised variables should be used as long as these variables all come from the core section of the interview. On the other hand, no attempt was made to ensure consistency between the imputation-revised core and noncore variables. Therefore, for analyses of relationships requiring imputation-revised variables from both the core and noncore sections of the interview, simultaneous use of these variables may not be appropriate.

Variance Estimation of Totals

Prevalence rates are the proportions of the population who exhibit characteristics of interest (such as substance use). Let \hat{p}_d represent the prevalence rate of interest for domain d . Then \hat{p}_d would be defined as the ratio

$$\hat{p}_d = \frac{\hat{Y}_d}{\hat{N}_d},$$

where $\hat{Y}_d = \sum_{i \in S} w_i \delta_i y_i$, which represents the estimated number of individuals exhibiting the characteristic of interest in domain d ; $\hat{N}_d = \sum_{i \in S} w_i \delta_i$, which represents the estimated population total for domain d ; S represents the sample; w_i represents the analysis weight; δ_i represents an indicator variable that is defined as 1 if the i th sample unit is in domain d and is equal to 0 otherwise; and y_i represents an indicator variable that is defined as 1 if the i th sample unit exhibits the characteristic of interest and is equal to 0 otherwise.

The sampling error of an estimate is the error caused by the selection of a sample instead of conducting a census of the population. The sampling error may be reduced by selecting a large sample and/or by using efficient sample design and estimation strategies, such as stratification, optimal allocation, and ratio estimation. The use of probability sampling methods in NSDUH allows estimation of sampling error from the survey data. The standard errors (SEs, which are the square roots of the variances) are used to identify unreliable estimates and to test for the statistical significance of differences between estimates.

Suitable software packages, such as SUDAAN,²⁸ can be used to calculate direct estimates of \hat{Y}_d and \hat{N}_d (and, therefore, \hat{p}_d) and also can be used to estimate their respective SEs.

Although the SEs of estimates of means and proportions can be calculated appropriately in software (such as SUDAAN) using a Taylor series linearization approach, SEs of estimates of totals may be underestimated in situations where the domain size is poststratified to data from the U.S. Census Bureau.

When the domain size, \hat{N}_d , is free of sampling error, an appropriate estimate of the SE for the total number of individuals with a characteristic of interest is

$$\text{SE}(\hat{Y}_d) = \hat{N}_d \text{SE}(\hat{p}_d).$$

This approach is theoretically correct when the domain size estimates, \hat{N}_d , are among those forced to match their respective U.S. Census Bureau population estimates through the weight calibration process.²⁹ In these cases, \hat{N}_d is not subject to a sampling error induced by the NSDUH design. For estimated domain totals, \hat{Y}_d , where \hat{N}_d is not fixed (i.e., where domain size estimates are not forced to match the U.S. Census Bureau population estimates), this formulation still may provide a good approximation if it can be assumed that the sampling variation in \hat{N}_d is negligible relative to the sampling variation in \hat{p}_d . This is a reasonable assumption for many cases in this study.

For various subsets of estimates, the above approach yielded an underestimate of the variance of a total because \hat{N}_d was subject to considerable variation. Because of this underestimation, alternatives for estimating SEs of totals can be implemented.

A "mixed" method approach can be used to improve the accuracy of SEs and to better reflect the effects of poststratification on the variance of total estimates. This approach assigns the method of SE calculation to domains (subgroups for which the estimates were calculated) so that all estimates among a select set of domains with fixed \hat{N}_d were calculated using the formula above, and all other estimates were calculated directly in SUDAAN. The set of domains considered controlled (i.e., those with a fixed \hat{N}_d) was restricted to main effects and two-way interactions in order to maintain continuity between years. The use of such SEs did not affect the SE estimates for the corresponding proportions because all SEs for means and proportions are calculated directly in SUDAAN. **Table 1** contains a list of domains with fixed \hat{N}_d for the public use file.

²⁸ See footnote 20.

²⁹ See footnote 18.

Table 1. Demographic Domains Forced to Match Their Respective U.S. Census Bureau Population Estimates through the Public Use File Weight Calibration Process: 2014

| Main Effects | Two-Way Interactions |
|--|--|
| Age Group | |
| 12-17 | |
| 18-25 | |
| 26-34 | |
| 35+ | |
| All Combinations of Groups Listed Above ¹ | Age Group × Gender (e.g., Males Aged 12 to 17) |
| Gender | |
| Male | |
| Female | |
| Race/Ethnicity | |
| Hispanic or Latino | |
| Not Hispanic or Latino, White | |
| Not Hispanic or Latino, Black | |
| Not Hispanic or Latino, Others | |

¹Combinations of the age groups (including but not limited to 12 or older, 18 or older, 26 or older, and 35 or older) also were forced to match their respective U.S. Census Bureau population estimates through the weight calibration process.

Statistical Significance of Differences

Due to the 2002 NSDUH methodology changes, the 2002 data constitute a new baseline for tracking trends in substance use and other measures. *As noted previously, it is not considered appropriate to make comparisons of the 2002 through 2014 CAI estimates with 2001 and earlier NHSDA estimates to assess changes in substance use over time. If comparisons such as these are made, it is recommended that they be interpreted with caution.* For a more detailed description of the changes to the 2002 NSDUH methodology, see Appendix C of the *Results from the 2002 National Survey on Drug Use and Health: National Findings*.³⁰

Customarily, the observed difference between estimates is evaluated in terms of its statistical significance. Statistical significance is based on the *p* value of the test statistic and refers to the probability that a difference as large as that observed would occur due to random variability in the estimates if there were no difference in the prevalence estimates for the population groups being compared. The significance of observed differences is generally reported at the 0.05 and 0.01 levels when the *p* value is defined as less than or equal to the designated significance level.

³⁰ Office of Applied Studies. (2003). *Results from the 2002 National Survey on Drug Use and Health: National findings* (HHS Publication No. SMA 03-3836, NSDUH Series H-22). Rockville, MD: Substance Abuse and Mental Health Services Administration.

When comparing prevalence estimates, one can test the null hypothesis (no difference between prevalence estimates) against the alternative hypothesis (there is a difference in prevalence estimates) using the standard difference in proportions test expressed as

$$Z = \frac{\hat{p}_1 - \hat{p}_2}{\sqrt{\text{var}(\hat{p}_1) + \text{var}(\hat{p}_2) - 2\text{cov}(\hat{p}_1, \hat{p}_2)}},$$

where \hat{p}_1 = first prevalence estimate, \hat{p}_2 = second prevalence estimate, $\text{var}(\hat{p}_1)$ = variance of first prevalence estimate, $\text{var}(\hat{p}_2)$ = variance of second prevalence estimate, and $\text{cov}(\hat{p}_1, \hat{p}_2)$ = covariance between \hat{p}_1 and \hat{p}_2 . Note that the first and second prevalence estimates may take the form of prevalence estimates from two different survey years (e.g., 2013 and 2014, respectively), prevalence estimates from sets of combined survey data (e.g., 2011-2012 annual averages and 2013-2014 annual averages, respectively), or prevalence estimates for populations of interest within a single survey year.

Under the null hypothesis, Z is asymptotically distributed as a normal random variable. Therefore, calculated values of Z can be referred to the unit normal distribution to determine the corresponding probability level (i.e., p value). Because the covariance term between the two estimates is not necessarily zero, SUDAAN³¹ may be used to compute estimates of Z along with the associated p values such that the covariance term is calculated by taking the sample design into account. A similar procedure and formula for Z is used for testing between the estimated totals.

When comparing population subgroups defined by three or more levels of a categorical variable, log-linear chi-square tests of independence of the subgroup and the prevalence variables should be conducted first to control the error level for multiple comparisons. If Shah's Wald F test (transformed from the standard Wald chi-square and computed in SUDAAN) indicates overall significant differences, the significance of each particular pairwise comparison of interest should be tested using SUDAAN analytic procedures to properly account for the sample design.³²

If SUDAAN is not available to compute the significance testing, using published estimates can provide similar testing results. When comparing prevalence rates shown with SEs, t tests that assume independence for the difference of proportions can be performed and usually will provide the same results as tests performed in SUDAAN. However, where the p value is close to the predetermined level of significance, results may differ for two reasons: (1) the covariance term is included in the SUDAAN tests, whereas it is not included in t tests that assume independence; and (2) the reduced number of significant digits shown in the published estimates may cause rounding errors in the t tests assuming independence.

Although not generated in all NSDUH publications, some publications do include sampling error in the form of 95 percent confidence intervals (CIs). CIs for NSDUH are computed using degrees of freedom (df) and critical values of the t -distribution, which will

³¹ See footnote 20.

³² See footnote 20.

change dependent on which sample of data is being analyzed. For more information about computing CIs and df , see Sections 8 and 6, respectively, in the 2013 statistical inference report.³³ In terms of testing for differences between prevalence rates shown with 95 percent CIs, it is important to note that two overlapping 95 percent CIs do not imply that their rates are statistically equivalent at the 5 percent level of significance.³⁴

Use of Sample Weights and Sample Design Variables

Data file users who wish to analyze data from multiple survey years, including 2014 (e.g., 2002 through 2014³⁵), should first sort the combined data by the sample design variables VESTR (variance estimation [pseudo] stratum) and VEREP (variance estimation [pseudo] replicate within stratum). These variables then are specified in a software package, such as SUDAAN, to automatically account for the 50 percent overlap between successive years when estimating variances and SEs. The final person-level analysis weight on the data file should be used when analyzing data for any single year or when comparing estimates between years within a combined file containing data from multiple years. However, estimation of the annual average number of individuals who have engaged in a particular behavior based upon pooled data from multiple years requires adjustment to the analysis weights. These adjusted weights would be created as the final weight divided by the number of years of combined data (e.g., the person-level weight divided by 13 for estimates based on the combined 2002 through 2014 data).

If a data file user is interested in generating estimates using some combination of quarter-level data, a sample weight can be created using the person-level analysis weight as follows:

$$\begin{aligned} \text{New Weight} &= (4/q) * \text{Person-Level} && \text{If the record represents a respondent in} \\ &\quad \text{Analysis Weight} && \text{one of the quarters of interest} \\ &= 0 && \text{Otherwise, ...} \end{aligned}$$

where q = total number of quarters in the domain of interest.

For example, if one is interested in generating estimates for the first quarter of 2014, an appropriate sample weight would be constructed as follows:

$$\begin{aligned} \text{New Weight} &= (4/1) * \text{Person-Level} && \text{If the record represents a respondent in} \\ &\quad \text{Analysis Weight} && \text{quarter 1} \\ &= 0 && \text{If the record represents a respondent in} \\ & && \text{quarters 2, 3, or 4.} \end{aligned}$$

³³ Center for Behavioral Health Statistics and Quality. (2015). *2013 National Survey on Drug Use and Health: Methodological resource book (Section 13, Statistical inference report)*. Rockville, MD: Substance Abuse and Mental Health Services Administration.

Overlapping confidence intervals or standard error intervals: What do they mean in terms of statistical significance? *Journal of Insect Science*, 3, 34. doi:<http://dx.doi.org/10.1673/031.003.3401>. Also see the following reference for further details: Schenker, N., & Gentleman, J. F. (2001, August). On judging the significance of differences by examining the overlap between confidence intervals. *American Statistician*, 55(3), 182-186. doi:10.1198/000313001317097960

³⁵ Changes in the sample design are accounted for in the sample design variables. Therefore, it is appropriate to combine 2002 through 2013 data with data from 2014 and onward.

If one is interested in generating estimates for the first half of 2014 (quarters 1 and 2), an appropriate sample weight would be constructed as follows:

$$\begin{aligned}\text{New Weight} &= (4/2) * \text{Person-Level} && \text{If the record represents a respondent in} \\ &\quad \text{Analysis Weight} && \text{quarters 1 or 2} \\ &= 0 && \text{If the record represents a respondent in} \\ &&& \text{quarters 3 or 4.}\end{aligned}$$

In years when a split-sample design is implemented, a special weight is developed for the split samples. When analysis with pooled data from multiple years is conducted, analysts should check the documents for that specific year on how to use the analysis weights in order to use a proper analysis weight for the pooled data analysis.

For example, in the 2004 NSDUH, adult respondents aged 18 or older were split approximately evenly, where respondents in sample A were administered the full adult mental health module as it had been administered in 2002 and 2003, and respondents in sample B were administered a short version of the adult mental health module in addition to the adult depression module as it was administered in 2005, 2006, and 2007. Thus, analyses using 2004 data from either the adult mental health module (renamed to the psychological distress module in 2005, 2006, and 2007) or the adult depression module need to be conducted using a different weight variable. For 2004, analyses that include the adult mental health variables for MDE and/or unadjusted SPD should involve the following: (1) Select either sample A or sample B by using the ADLTSAMP variable (ADLTSAMP = 1 corresponds to sample A, and ADLTSAMP = 2 corresponds to sample B) to restrict the analysis to the appropriate half sample; (2) when combining 2004 adult half-sample data with data for survey years that have comparably defined adult mental health variables, the weight variable (SPD analysis weight for 2004 and the person-level analysis weight for the other years in the analysis) should be divided by the total number of years in the analysis.

Confidentiality of Data

To protect the confidentiality of respondents to the 2014 NSDUH, the full analytic file of 67,901 individuals was treated using a statistical disclosure limitation method called MASSC,^{36,37,38} which consists of the following four major steps: Micro Agglomeration, optimal probabilistic Substitution, optimal probabilistic Subsampling, and optimal sampling weight Calibration. All directly identifying information (such as name, phone number, and address) on

the file was eliminated. In addition, census region, state, and other geographic identifiers were removed. Moreover, the household link between respondents from the same household was not included in the public use file.

All of the variables on the file were reviewed for the possibility of identifying a respondent by combining a number of them at one time. Variables considered to have a high potential of personal identification, as well as a high value for analysis, were treated by standard procedures of categorization and top-and-bottom coding. Using the selected key identifying variables, the data were partitioned into risk strata to control for level of treatment in the micro agglomeration step. In addition, two other techniques were used in MASSC to introduce sufficient uncertainty for anyone who attempted to identify an individual and his or her confidential responses. First, on a random basis, a sample of records was drawn, and variables were substituted from a similar donor record. This step, referred to as substitution, introduces uncertainty about the identity of a record in the database. This process makes it difficult for an intruder to be certain that any record corresponds to a specific individual because some of the variables used to identify the record may have come from other individuals. Second, a portion of the records was randomly removed from the file to reduce the probability of determining that any known respondent was in the public use file. This step, referred to as subsampling, introduces further uncertainty about the presence of a target record in the database. The result is that there is a very small probability of identifying an individual from the file.

Substitution and subsampling were done while simultaneously constraining the resultant file to a minimal increase in bias and a minimal decrease in precision for numerous estimates of drug use prevalence across a number of domains. In addition, the weights on the final file were recalibrated to known totals from the full restricted-use analytic file so as to minimize the decrease in precision owing to the two techniques. Under the MASSC framework, both disclosure risk and information loss are controlled and measured simultaneously.

A further disclosure control procedure includes the treatment of the design variables (VESTR and VEREP). These stratum and replicate identifiers were treated by coarsening, substitution, and scrambling. For the 2014 public use file, the variance estimation stratum variable VESTR was aggregated into 50 pseudo-strata due to sample redesign (see the section on Changes to NSDUH for 2014), whereas in 2013 and prior years, there were 60 pseudo-strata. In addition, certain variables were recoded (e.g., by collapsing of rare levels) or locally suppressed (e.g., by setting to missing values) for confidentiality reasons.

A number of variables were reviewed after the above process was completed in order to determine the impact of these techniques on the bias and precision of estimates compared with those from the full (i.e., untreated or restricted-use) file. These variables included both variables for which partial records were substituted and other variables that were not perturbed. In addition, the change in precision in estimates was studied for 340 combinations of 34 domains and 10 response variables (e.g., the combination of past month alcohol use in the 12 to 17 age group). The ratio of the estimates from the full restricted-use file and the public use file was calculated for each domain and response variable combination. The average ratio over the 34 domains for the 10 response variables was within the 0.98 to 1.08 range. Similarly, to assess the decrease in precision, the SE was compared between the public use file and the full restricted-use file. For the 10 response variables, the average increase in SEs over the 34 domains was about

3 to 9 percent, with the exception of STMFLAG (stimulants ever used) and HALFLAG (hallucinogens ever used), which had an average increase in the SEs of about 12 and 13 percent, respectively.

These statistical disclosure limitation methods have been implemented in such a way that the public use file continues to be representative of civilian members of the noninstitutionalized population in the United States.

Public Use File Estimates and Standard Errors

The sampling weights on the public use file were adjusted for subsampling and calibrated with respect to 45 demographic domains. A sublist of the domains that match their respective U.S. Census Bureau population estimates can be found in [Table 1](#) (shown earlier). Note that the domains in Table 1 are different from those in Table B.1 of the report titled *2014 National Survey on Drug Use and Health: Methodological Summary and Definitions*³⁹ because of different adjustments applied to the weights on the public use file. Survey analysis software can be used with these weights, along with the sample design variables VESTR and VEREP, to estimate various parameters and their SEs. [Tables 2](#) and [3](#) show prevalence estimates and their SEs for certain demographic domains that were not included in the calibration constraints.

[Table 2](#) shows the ratio of prevalence estimates and SEs from the public use file subsample to the full sample for past month marijuana use, a relatively high prevalence drug. [Table 3](#) shows the same ratios for past year heroin use, a relatively low prevalence drug. The results are shown for seven demographic domains.

Table 2. Past Month Marijuana Prevalence and Standard Error Ratios of the Public Use File Subsample to the Full Sample, by Seven Domains: 2014

| Domain | Prevalence Ratio | Standard Error Ratio |
|--|------------------|----------------------|
| Non-Hispanic American Indian or Alaska Native | 1.07 | 0.98 |
| Non-Hispanic Native Hawaiian or Other Pacific Islander | 0.98 | 1.00 |
| Non-Hispanic Asian | 0.95 | 1.14 |
| Non-Hispanic Two or More Races | 1.03 | 0.91 |
| Household with Four Members | 0.99 | 1.05 |
| Household with Five Members | 0.99 | 0.98 |
| Household with Six or More Members | 1.00 | 1.06 |

Note: *Ratio = (Public use file subsample estimate / Full sample estimate)*.

Table 3. Past Year Heroin Prevalence and Standard Error Ratios of the Public Use File Subsample to the Full Sample, by Seven Domains: 2014

| Domain | Prevalence Ratio | Standard Error Ratio |
|--|------------------|----------------------|
| Non-Hispanic American Indian or Alaska Native | 1.08 | 1.06 |
| Non-Hispanic Native Hawaiian or Other Pacific Islander | 0.95 | 0.96 |
| Non-Hispanic Asian | .. | .. |
| Non-Hispanic Two or More Races | 1.20 | 1.33 |
| Household with Four Members | 1.06 | 1.19 |
| Household with Five Members | 1.12 | 1.03 |
| Household with Six or More Members | 1.04 | 0.98 |

Note: *Ratio = (Public use file subsample estimate / Full sample estimate)*. Missing cells are due to a zero-observed prevalence rate in certain race/ethnicity domains.

IDENTIFICATION

IDENTIFICATION

The following variable, QUESTID2, is a unique record identifier within a particular study year. The IDs may be repeated in other study years, so analysts should always consider the study year when using the QUESTID2. It should be noted that this variable was referred to as QUESTID in prior years.

QUESTID2 Len: 7 RESPONDENT IDENTIFICATION

The following variable, FILEDATE, represents the date the SAS data file was created.

FILEDATE Len: 10 CREATION DATE OF THE DATA FILE

TOBACCO

TOBACCO

These questions are about your use of tobacco products. This includes cigarettes, chewing tobacco, snuff, cigars, and pipe tobacco. The first questions are about cigarettes only.

Have you ever smoked part or all of a cigarette?

| CIGEVER | Len: 1 | EVER SMOKED A CIGARETTE | Freq | Pct |
|---------|--------|-------------------------|-------|-------|
| | | 1 = Yes | 29212 | 52.85 |

NOTE: Prior to 2004, the question corresponding to CIG30MEN asked whether respondents smoked menthol or regular cigarettes most often. In 2004, the question was changed to the yes/no question shown below, but the variable name stayed as CIG30MEN. This change in question content does not affect trend comparisons for 2004 onward. However, data in CIG30MEN for 2004 onward are not likely to be comparable with data in CIG30MEN for 2002 and 2003.

Were the cigarettes you smoked during the past 30 days menthol?

These next questions are about your use of snuff, sometimes called dip. Snuff is a finely ground form of tobacco that usually comes in a container called a tin. You can use snuff by placing a pinch or dip in your mouth between your lip and gum or between your cheek and gum. Snuff can also be inhaled through the nose. Snuff is sold in both loose form or in ready-to-use packets.

Have you ever used snuff, even once?

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

NOTE: The variables SLTTRY, SLTYFU, SLTMFU, SLTREC, and SLT30BR2 are recoded variables for the use of any smokeless tobacco product (either chewing tobacco or snuff). These variables were recoded from CHEWTRY, SNUFTRY, CHEWYFU, SNUFYFU, CHEWMFU, SNUFMU, CHEWREC, SNFREC, CHW30BR2, and SNF30BR2. The variable SLT30FAV refers to the brand of smokeless tobacco used most often, and was recoded from Questions CG33a through CG33d.

ALCOHOL

ALCOHOL

These questions are about drinks of alcoholic beverages. Throughout these questions, by a "drink" we mean a can or bottle of beer, a glass of wine or a wine cooler, a shot of liquor, or a mixed drink with liquor in it. We are not asking about times when you only had a sip or two from a drink.

Have you ever, even once, had a drink of any type of alcoholic beverage? Please do not include times when you only had a sip or two from a drink.

| ALCEVER | Len: 2 EVER HAD DRINK OF ALCOHOLIC BEVERAGE | Freq | Pct |

MARIJUANA

MARIJUANA

The next questions are about marijuana and hashish. Marijuana is also called pot or grass. Marijuana is usually smoked, either in cigarettes, called joints, or in a pipe. It is sometimes cooked in food. Hashish is a form of marijuana that is also called "hash." It is usually smoked in a pipe. Another form of hashish is hash oil.

Have you ever, even once, used marijuana or hashish?

HALLUCINOGENS

HALLUCINOGENS

The next questions are about substances called hallucinogens. These drugs often cause people to see or experience things that are not real.

A list of some common hallucinogens is shown below. These and many other substances that people use as hallucinogens are often known by street names, and we can't list them all. Please take a moment to look at the substances listed below so you know what kind of drugs the next questions are about.

LSD, also called 'acid'
 PCP, also called 'angel dust' or phencyclidine
 Peyote
 Mescaline
 Psilocybin
 'Ecstasy,' also called MDMA

Have you ever, even once, used LSD, also called "acid"?

| LSD | Len: 2 | EVER USED LSD ("ACID") | Freq | Pct |
|-----|--------|---------------------------------------|-------|-------|
| | | 1 = Yes | 4337 | 7.85 |

INHALANTS

INHALANTS

These next questions are about liquids, sprays, and gases that people sniff or inhale to get high or to make them feel good. We are not interested in times when you inhaled a substance accidentally - such as when painting, cleaning an oven, or filling a car with gasoline.

The questions use the term 'inhalant' to include all the things listed below, as well as any other substances that people sniff or inhale for kicks or to get high. Take a moment to look at the substances listed below so you know what kinds of liquids, sprays, and gases these questions are about.

Amyl nitrite, 'poppers,' locker room odorizers, or 'rush'
 Correction fluid, degreaser, or cleaning fluid
 Gasoline or lighter fluid
 Glue, shoe polish, or toluene
 Halothane, ether, or other paint solvents
 Lighter gases, such as butane or propane
 Nitrous oxide or 'whippets'
 Spray paints
 Other aerosol sprays

Have you ever, even once, inhaled amyl nitrite, 'poppers,' locker room odorizers, or 'rush' for kicks or to get high?

The answers that people give us about their use of inhalants are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of inhalant for kicks or to get high?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: AMYLNIT, CLEFLU, GAS, GLUE, ETHER, SOLVENT, LGAS, NITOXID, SPPAINT, AEROS, or INHNOLST. This variable also was coded as 91 if all of the above variables were coded as 91.

PAIN RELIEVERS

PAIN RELIEVERS

Now we have some questions about drugs that people are supposed to take only if they have a prescription from a doctor. We are only interested in your use of a drug if:

- the drug was not prescribed for you, or
- you took the drug only for the experience or feeling it caused.

These questions are about the use of pain relievers. We are not interested in your use of "over-the-counter" pain relievers such as aspirin, Tylenol, or Advil that can be bought in drug stores or grocery stores without a doctor's prescription.

Card A shows pictures of some different kinds of prescription pain relievers and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription pain relievers that were not prescribed for you or that you took only for the experience or feeling they caused. Please look at Card A carefully as you answer the next questions.

Have you ever, even once, used Darvocet, Darvon, or Tylenol with codeine that was not prescribed for you or that you took only for the experience or feeling it caused?

The answers that people give us about their use of prescription pain relievers are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription pain reliever that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: DARVTYLC, PERCTYLX, VICOLOR, ANLCARD, or ANLNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

NOTE: Although the Food and Drug Administration (FDA) did not approve OxyContin for medical use in the United States until late 1995, no editing was done to OXYCAGE when respondents reported first using OxyContin at ages that would indicate nonmedical use prior to FDA approval. Although no editing was done for these cases, caution is advised in interpreting data from these respondents, and particularly the farther that OXYCAGE would be from first use in 1995.

Now think only about your use of Oxycontin that was not prescribed for you or that you took only for the experience or feeling it caused. How old were you the first time you used Oxycontin in either of these ways?

How old were you the first time you used Oxycontin that was not prescribed for you or that you took only for the experience or feeling it caused?

TRANQUILIZERS

TRANQUILIZERS

These next questions ask about the use of tranquilizers. Tranquilizers are usually prescribed to relax people, to calm people down, to relieve anxiety, or to relax muscle spasms. Some people call tranquilizers "nerve pills."

Card B shows pictures of some different kinds of prescription tranquilizers. These pictures show only pills, but we are interested in your use of any form of prescription tranquilizers that were not prescribed for you, or that you took only for the experience or feeling they caused.

Please look at Card B carefully as you answer the next questions.

Have you ever, even once, used Klonopin or Clonazepam that was not prescribed for you or that you took only for the experience or feeling it caused?

TRANQUILIZERS

The answers that people give us about their use of prescription tranquilizers are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription tranquilizer that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: KLOPIN, XNAXATVN, VALMDIAZ, TRNCARD, or TRNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

TRANQUILIZERS

Now think about the past 12 months, from [DATEFILL] through today. We want to know how many days you've used any prescription tranquilizer that was not prescribed for you or that you took only for the experience or feeling it caused during the past 12 months.

What would be the easiest way for you to tell us how many days you used a prescription tranquilizer in either of these ways?

| TRBSTWAY | Len: 2 EASIEST WAY TO TELL US # DAYS USED TRANQUILIZER | Freq | Pct |

STIMULANTS

STIMULANTS

These next questions ask about the use of drugs such as amphetamines that are known as stimulants, "uppers," or "speed." People sometimes take these drugs to lose weight, to stay awake, or for attention deficit disorders. We are not interested in the use of "over-the-counter" stimulants such as Dexatrim or No-Doz that can be bought in drug stores or grocery stores without a doctor's prescription.

Card C shows pictures of some different kinds of prescription stimulants and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription stimulants that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card C carefully as you answer the next questions.

Have you ever, even once, used Methamphetamine, Desoxyn, or Methedrine that was not prescribed for you or that you took only for the experience or feeling it caused? Methamphetamine is also known as crank, crystal, ice, or speed.

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

STIMULANTS

The answers that people give us about their use of prescription stimulants are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription stimulant that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: METHDES, DIETPILS, RITMPHEN, STMCARD, or STMNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

SEDATIVES

SEDATIVES

These next questions ask about the use of sedatives or barbiturates. These drugs are also called "downers," or "sleeping pills." People take these drugs to help them relax or to help them sleep. We are not interested in the use of "over-the-counter" sedatives such as Sominex, Unisom, Nyquil, or Benadryl that can be bought in drug stores or grocery stores without a doctor's prescription.

Card D shows pictures of some different kinds of prescription sedatives and lists the names of some others. These pictures show only pills, but we are interested in your use of any form of prescription sedatives that were not prescribed for you, or that you took only for the experience or feeling they caused. Please look at Card D carefully as you answer the next questions.

Have you ever, even once, used Methaqualone, Sopor, or Quaalude that was not prescribed for you or that you took only for the experience or feeling it caused?

SEDATIVES

The answers that people give us about their use of prescription sedatives are important to this study's success. We know that this information is personal, but remember your answers will be kept confidential.

Please think again about answering this question: Have you ever, even once, used any type of prescription sedative that was not prescribed for you or that you took only for the experience or feeling it caused?

NOTE: This variable was coded as 1 if respondents answered yes to the above question and 91 if respondents answered the above question as no (see below). This variable also was coded as 1 if the questions corresponding to any of the following variables were answered as yes: METHAQ, NEMBBARB, RESTTMAZ, SEDCARD, or SEDNOLST. This variable also was coded as 81 or 91 if all of the above variables were coded as 81 or 91, respectively.

| SEDEVER | Len: 2 EVER USED SEDATIVES NONMEDICALLY | Freq | Pct |

RECODED DRUG USE

RECODED DRUG USE

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

The following three variables (CPNSTMFG, CPNSTMYR, CPNSTMMN), like the preceding three variables (STMFLAG, STMYR, STMMON), report lifetime, past year, and past month stimulant use. However, whereas STMFLAG, STMYR, and STMMON used the core-only methamphetamine variables MTHFLAG, MTHYR, and MTHMON in their construction, these three variables use the core-plus-noncore methamphetamine variables CPNMTHFG, CPNMTHYR, and CPNMTHMN. For details on the core-plus-noncore methamphetamine variables, please see Appendix B.4.8 of the 2008 Summary of Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

| | | 1 = Used within the past month | 405 | 0.73 |

The following three variables (MTHFLAG, MTHYR, MTHMON), report recency of use for methamphetamine using only core data from the Stimulants module of the questionnaire, unlike the next three variables (CPNMTHFG, CPNMTHYR, CPNMTHMN), which use additional methamphetamine use data from the Special Drugs module. Methamphetamine use data were first added to the Special Drugs module in 2005, then were augmented in 2006 to include further clarifications. For details, please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings Report.

RECODED DRUG USE

The following three variables (CPNMTHFG, CPNMTHYR, CPNMTHMN), like the preceding three variables (MTHFLAG, MTHYR, MTHMON), report lifetime, past year, and past month methamphetamine use. However, MTHFLAG, MTHYR, and MTHMON are based only on data from the methamphetamine questions in the stimulants section of the prescription drug module of the core questionnaire. In 2005 new methamphetamine items were added to the noncore Special Drugs module to capture methamphetamine users who failed to report the drug in the prescription stimulants module. These were augmented in 2006 to include clarifications. The new noncore Special Drugs items were used to construct the final CPNMTHFG, CPNMTHYR, and CPNMTHMN variables. For details, please see Appendix B.4.8 of the 2008 Summary of Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

RECODED DRUG USE

"Binge" Alcohol Use, BINGEDRK, is defined as drinking five or more drinks on the same occasion on at least 1 day in the past 30 days. For this variable, "occasion" means at the same time or within a couple hours of each other.

| | | | | |
|-----------------|--|--|-------------|------------|
| BINGEDRK | Len: 1 BINGE ALCOHOL USE PAST 30 DAYS | | Freq | Pct |
| | 0 = Never/No "Binge" alcohol use (IRALCD5 = 0,91,93) | | 42044 | 76.07 |
| | 1 = "Binge" alcohol use (IRALCD5 = 1-30)..... | | 13227 | 23.93 |

Heavy Alcohol Use, HVYDRK2, is defined as drinking five or more drinks on the same occasion on each of 5 or more days in the past 30 days. For this variable, "occasion" means at the same time or within a couple hours of each other. All Heavy Alcohol Users are also "Binge" Alcohol Users.

| | | | | |
|----------------|--|--|-------------|------------|
| HVYDRK2 | Len: 1 HEAVY ALCOHOL USE PAST 30 DAYS | | Freq | Pct |
| | 0 = Never/No heavy alcohol use (IRALCD5 = 0-4,91,93) | | 51736 | 93.60 |
| | 1 = Heavy alcohol use (IRALCD5 = 5-30) | | 3535 | 6.40 |

The following variable, BINGEHVY, was created by examination of past month binge alcohol use (BINGEDRK), past month heavy alcohol use (HVYDRK2), and past month alcohol use (ALCMON). To be considered a past month "binge" or heavy alcohol user, a respondent must have used alcohol in the past month. Further, to be a past month heavy alcohol user, a respondent must also be a past month "binge" alcohol user.

| | | | | |
|-----------------|--|--|-------------|------------|
| BINGEHVY | Len: 1 LEVEL OF ALCOHOL USE IN PAST MONTH | | Freq | Pct |

RECODED SPECIAL DRUGS

RECODED SPECIAL DRUGS

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The variables STNEEDLR, STNLRECR, and NEDLRECR were created to be consistent with data from corresponding variables prior to 2005. STNEEDLR was derived from the variables MTHNEEDL and OSTNEEDL. STNLRECR was derived from the variables MTNDLREC and OSTNLREC. NEDLRECR was derived from the variables HRNDLREC, CONDLREC, and STNLRECR. The variables STNEDL06, STNLRC06, and NDLREC06 also took into account data from the methamphetamine variables MTHANEDL, MTANDLRC, and MTHEVCK from the SPECIAL DRUGS module. STNEDL06 was derived from STNEEDLR and MTHANEDL. STNLRC06 was derived from STNLRECR and MTANDLRC. NDLREC06 was derived from NEDLRECR and STNLRC06.

NOTE: The following eight variables indicate whether a respondent has ever used a needle to inject any drug, heroin, cocaine, stimulants, or methamphetamine.

NOTE: NEDFLG01, NEDSTM, and NEDMTH are based only on data from the methamphetamine questions in the Stimulants module of the core questionnaire. In 2005, new methamphetamine items were added to the non-core Special Drugs module to capture methamphetamine users who failed to report the drug in the prescription Stimulants module. These were augmented in 2006 to include clarifications. The new non-core Special Drugs items were used to create CPNNDFLG, CPNNNDSTM, and CPNNNDMTH. For details, please see Appendix B.4.8 of the 2008 National Findings Report. (NOTE: CPN is an abbreviation for Core-Plus-Noncore.)

A respondent was defined as having used a needle to inject drugs based on the core questions, NEDFLG01, if they indicated at least one of the following: using a needle to inject heroin (HERNEEDL), cocaine (COCNEEDL), stimulants in the Stimulants module (STNEEDL), or any other drug (OTDGNEEDL). Otherwise, a respondent was defined as never using needles to inject drugs.

| | | | |

A respondent was defined as having used a needle to inject drugs based on the core-plus-noncore questions, CPNNDFLG, if they indicated at least one of the following: using a needle to inject heroin (HERNEEDL), cocaine (COCNEEDL), stimulants or special drugs module (STNEDL06), or any other drug (OTDGNEEDL). Otherwise, a respondent was defined as never using needles to inject drugs.

RISK/AVAILABILITY

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

We are interested in your opinion about the effects of using certain drugs and other substances, about whether it's difficult or easy to get drugs, and the extent to which drugs are available in your neighborhood.

Please indicate how much you think people risk harming themselves physically and in other ways when they do each of the following activities.

If you're not sure, choose an answer for the amount of risk that comes closest to what you think might be true for that activity.

How much do people risk harming themselves physically and in other ways when they smoke one or more packs of cigarettes per day?

BLUNTS

BLUNTS

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

Sometimes people take some tobacco out of a cigar and replace it with marijuana. This is sometimes called a "blunt".

NOTE: When respondents previously reported never using marijuana but reported lifetime use of cigars with marijuana in them (i.e., "blunts"), a consistency check was triggered only when respondents reported using blunts in the past 30 days. Therefore, BLNTEVER was assigned a code of 11 when respondents reported using blunts but they did not report use in the past 30 days, and they previously had reported never using marijuana.

Have you ever smoked part or all of a cigar with marijuana in it?

NOTE: The variable BLNTNOMJ was assigned a code of 5 if respondents were not asked this question because they reported in the TOBACCO module that they smoked cigars in the past 30 days but reported in the BLUNTS module that they did not smoke cigars with marijuana in them in the past 30 days. It could be logically inferred that all of the cigars that these respondents smoked in the past 30 days did not have marijuana in them. BLNTNOMJ was assigned codes of 14 or 24 if respondents were not asked this question and they reported in the BLUNTS module that they smoked a cigar with marijuana in it in the past 30 days. A code of 14 was assigned if respondents reported in the TOBACCO module that they had smoked cigars but not in the past 30 days. A code of 24 was assigned if respondents reported in the TOBACCO module that they had never smoked part or all of a cigar.

Earlier, you reported that you had smoked part or all of a cigar during the past 30 days. During the past 30 days, did you smoke any cigars that did not have marijuana in them?

Please look at the symptoms listed below. During the past 12 months, did you have 3 or more of these symptoms at the same time that lasted for longer than a day after you cut back or stopped using heroin?

- Feeling kind of blue or down
- Vomiting or feeling nauseous
- Having cramps or muscle aches
- Having teary eyes or a runny nose
- Feeling sweaty, having enlarged eye pupils, or having body hair standing up on your skin
- Having diarrhea
- Yawning
- Having a fever
- Having trouble sleeping

SUBSTANCE DEPENDENCE AND ABUSE

NOTE: HALDAFLG is a flag variable that indicates differences in how the hallucinogen variables in the SUBSTANCE DEPENDENCE AND ABUSE MODULE would have been edited based on the logic in 2007, when only past year users from the core HALLUCINOGENS module were routed into the corresponding questions, and how these hallucinogen variables were edited this year. Editing this year took into account logic that routed past year users of ketamine (from KETAREC), the tryptamines DMT, AMT, and 5-MeO-DIPT/"Foxy" (from TRYPREC), and Salvia divinorum (from SALVREC) into these dependence and abuse questions for hallucinogens.

NOTE: STMDAFLG is a flag variable that indicates differences in how the stimulant variables in the SUBSTANCE DEPENDENCE AND ABUSE MODULE would have been edited based on logic in earlier years and how these stimulant variables were edited this year. In 2004, past year users were routed into the corresponding questions if they reported past year nonmedical use of prescription stimulants or methamphetamine in the core stimulants module or if they reported in the SPECIAL DRUGS module that they used methamphetamine or other stimulants with a needle (from MTNDLREC and OSTLNREC, respectively). Beginning in 2005 (and continuing this year), past year methamphetamine users from the SPECIAL DRUGS variables MTHAREC and MTANDLRC also were asked about stimulant dependence or abuse. STMDAFLG is coded as 1 through 6 if the inclusion of MTHAREC and MTANDLRC changed the outcome for editing of the stimulant dependence or abuse variables. This year, respondents who reported past year nonmedical use of Adderall (from ADDEREC) were eligible to be asked these questions as well. STMDAFLG is coded as 11 through 16 if the inclusion of ADDEREC changed the outcome for editing of these variables.

IMPUTED SUBSTANCE DEPENDENCE AND ABUSE

IMPUTED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: What follows are the imputation-revised versions of the 17 nicotine dependence variables that make up the Nicotine Dependence Syndrome Scale (NDSS). Missing values were only imputed if only one of the 17 variables had a missing value. Users should note that the imputed values for these variables are predicted values from regression models. These predicted values are not integers, and do not correspond directly to the integer responses from the questionnaire. It would be advisable to make the necessary adjustments (such as rounding or otherwise making the non-integer values into integers) when doing cross-tabulations.

RECODED SUBSTANCE DEPENDENCE AND ABUSE

RECODED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from the following two sections: Substance Dependence and Abuse or Imputed Substance Dependence and Abuse.

NOTE: The following recoded dependence variables were defined based on the dependence criteria according to the Nicotine Dependence Syndrome Scale (NDSS) and the Fagerstrom Test of Nicotine Dependence (FTND) for respondents who reported smoking cigarettes in the past month. The NDSS score, NDSSANSP, is calculated as the average score over 17 questions pertaining to five aspects of dependence. This average score was only computed for those respondents who had a valid response (based on actual reporting and imputation) to all 17 questions. Respondents who did not have valid responses (based on actual reporting and imputation) for all 17 questions were coded as SAS missing. Based on the NDSS score, a respondent was defined as having nicotine dependence, NDSSDNP=1, if their average score was greater than or equal to 2.75. The FTND measure is defined by assessing how soon after waking a respondent had their first cigarette (CIGWAKE). Based on the FTND scale, a respondent was defined as having nicotine dependence, FTNDDNP=1, if the first cigarette was smoked within 30 minutes of waking up on the days they smoked (CIGWAKE=1 or 2) and the respondent reported smoking cigarettes in the past month. Based on the NDSS and the FTND, a respondent who reported smoking cigarettes was defined as having nicotine dependence in the past month, DNICNSP=1, if they met either the NDSS or the FTND criteria for dependence. Specific details for each of the nicotine dependence related variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

| | | 6123 | 11.08 |

RECODED SUBSTANCE DEPENDENCE AND ABUSE

NOTE: The following recoded dependence variables were defined based on the dependence criteria listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). Specific details for each of the 10 individual drug dependence variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

A respondent was defined as having marijuana, inhalant, hallucinogen, or tranquilizer dependence (DEPNDMRJ, DEPDNDINH, DEPNDHAL, DEPNDTRN) if the respondent reported a positive response to three or more of the following six dependence criteria:

1. Spent a great deal of time over a period of a month getting, using, or getting over the effects of the substance (XXXLOTTM=1 or XXXGTOVR=1)
2. Unable to keep set limits on substance use or used more often than intended (XXXKPLMT=2)
3. Needed to use substance more than before to get desired effects or noticed that using the same amount had less effect than before (XXXNDMOR=1 or XXXLSEFX=1)
4. Unable to cut down or stop using the substance every time he or she tried or wanted to (XXXCUTEV=2)
5. Continued to use substance even though it was causing problems with emotions, nerves, mental health, or physical problems (XXXEMCTD=1 or XXXPHCTD=1)
6. Reduced or gave up participation in important activities due to substance use (XXXLSACT=1)

An additional question pertaining to withdrawal symptoms was asked for the following six drugs: alcohol, pain relievers, cocaine, heroin, sedatives, and stimulants. The withdrawal question asked the respondent if they had experienced substance specific withdrawal symptoms at one time that lasted for longer than a day after they cut back or stopped using (XXXWDSMT=1). The specific number and type of listed withdrawal symptoms varied by substance. A respondent was defined as having alcohol, pain reliever, cocaine, heroin, sedative, or stimulant dependence (DEPNDALC, DEPNDANL, DEPNDCC, DEPNDHER, DEPNDSED, DEPNDSTM) if the respondent reported a positive response to three or more of the seven dependence criteria (including the six standard criteria listed above plus a seventh withdrawal symptom criteria).

Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the substance dependence and withdrawal questions, it is possible for these dependence recode variables to be inconsistent with the imputed substance use and frequency of use variables. The types of inconsistencies that can occur differ by substance since different combinations of the skip logic criteria were used for each substance. Specific details about these inconsistencies are included in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

| | | Freq | Pct |
|----------|---|-------------|------------|
| DEPNDALC | Len: 1 ALCOHOL DEPENDENCE IN THE PAST YEAR 0 = No/Unknown (Otherwise)..... 1 = Yes (See comment above)..... | 53421 | 96.65 |

| | 1 = Yes (See comment above DEPNDALC)..... | 115 | 0.21 |

A respondent was defined with dependence on hallucinogens, DEPNDHAL, if the respondent was classified as being dependent (see dependence criteria listed above DEPNDALC) on hallucinogens and was routed to the dependence and abuse questions based ONLY on variables that existed in the 2007 skip logic (HALDAFLG=98). Respondents who only reported hallucinogen dependence based on the Special Drugs module questions added in 2008 were defined as not having dependence on hallucinogens. See Recoded Substance Dependence and Abuse Variable Documentation Appendix for further details.

A respondent was defined with dependence on sedatives, DEPNDSED, if the respondent was classified as being dependent (see dependence criteria listed above DEPNDALC) on sedatives and was routed to the dependence and abuse questions based ONLY on variables that existed in the 2007 skip logic (SEDDAFLG=98). Respondents who only reported sedative dependence based on the Special Drugs module questions added in 2008 were defined as not having dependence on sedatives. See Recoded Substance Dependence and Abuse Variable Documentation Appendix for further details.

NOTE: The following abuse variables were defined based on the abuse criteria listed in the Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition (DSM-IV). Specific details for each of the 10 individual substance abuse variables are provided in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

A respondent was defined as having alcohol, marijuana, cocaine, heroin, hallucinogen, inhalant, pain reliever, tranquilizer, stimulant, or sedative abuse (ABUSEALC, ABUSEMRJ, ABUSECOC, ABUSEHER, ABUSEHAL, ABUSEINH, ABUSEANL, ABUSETRN, ABUSESTM, ABUSESED) if they reported a positive response to one or more of the following four abuse criteria and was determined not to be dependent upon the substance of interest:

1. Respondent reported having serious problems due to substance use at home, work or school (XXXSERPB=1)
2. Respondent reported using substance regularly and then did something where substance use might have put them in physical danger (XXXPDANG=1)
3. Respondent reported substance use causing actions that repeatedly got them in trouble with the law (XXXLAWTR=1)
4. Respondent reported having problems caused by substance use with family or friends (XXXFMFPB=1) and continued to use substance even though it was thought to be causing problems with family and friends (XXXFMCTD=1)

Given the current editing and imputation procedures, along with the use of both core and non-core questions to determine whether or not a respondent was asked the abuse questions, it is possible for these abuse recode variables to be inconsistent with the imputed substance use and frequency of use variables. The types of inconsistencies that can occur differ by substance since different combinations of the skip logic criteria were used for each substance. Specific details about these inconsistencies are included in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

In addition, because the dependence and abuse variables are mutually exclusive with dependence taking precedence (i.e., dependence is determined first and respondents are only classified as having abused if they are not already classified as dependent, regardless of responses to the abuse questions), it is possible for the variables showing abuse of a combination of substances to not correspond with the abuse status of those individual substances. For example, a respondent who is classified as having abused cocaine in the past year may be classified as not having abused illicit drugs because they were dependent on marijuana and already classified as being dependent on illicit drugs.

SPECIAL TOPICS

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

The next questions are about encounters with the police or the court system.

Not counting minor traffic violations, have you ever been arrested and booked for breaking the law?

Being "booked" means that you were taken into custody and processed by the police or by someone connected with the courts, even if you were then released.

| BOOKED ¹ | Len: 2 EVER ARRESTED AND BOOKED FOR BREAKING THE LAW | Freq | Pct |

NOTE: For the variable BKOTH, a code of 3 indicates that respondents did not originally answer "yes" to any of the questions about specific offenses for which they were arrested/booked in the past 12 months, including the question about "some other offense." However, these respondents subsequently specified a valid response for an offense in the past 12 months. A code of 5 in BKOTH indicates that respondents reported being arrested/booked at least once in the past 12 months but did not indicate at least one offense for which they were arrested in that period.

In the past 12 months, were you arrested and booked for some other offense besides these that have been named? Please do not include minor traffic violations.

NOTE: DRVFLAG identifies those respondents (Rs) who were routed to the questions corresponding to DRVALDR or DRVDONLY (or both) solely because they reported use of methamphetamine (from MTHAREC), Adderall (from ADDEREC), Ambien (from AMBIREC), or hallucinogens (from KETAREC, TRYPREC, or SALVREC) in the past year in the SPECIAL DRUGS module.

DRVFLAG was coded as 5 if the only indication of past year use came from MTHAREC through SALVREC and Rs reported past year use for more than one of these drugs. Rs for whom DRVFLAG had values of 1 through 5 were not counted in the creation of the RECODED SPECIAL TOPICS variables pertaining to substance use and driving, for consistency with how substance use and driving variables were created prior to the changes in logic that asked these questions of these additional noncore past year users.

| DRVFLAG¹ | Len: 2 ONLY PAST YEAR USER FROM NONCORE SPECIAL DRUGS | Freq | Pct |
|---|---|-------------|------------|
| 1 = Only methappet user from Special Drugs (see note) | | 9 | 0.02 |

RECODED SPECIAL TOPICS

RECODED SPECIAL TOPICS

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

RECODED MARIJUANA PURCHASES

RECODED MARIJUANA PURCHASES

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

| MJPGOT | Len: 1 | METHOD OF OBTAINING LAST USED MARIJUANA | Freq | Pct |
|--------|--------|--|-------|-------|
| | | 1 = Bought it (MMGETMJ=1) | 4499 | 8.14 |
| | | 2 = Traded for it (MMGETMJ=2) | 103 | 0.19 |
| | | 3 = Got it for Free/Shared (MMGETMJ=3) | 4704 | 8.51 |
| | | 4 = Grew it Yourself (MMGETMJ=4) | 97 | 0.18 |
| | | 5 = Method Unspecified (Otherwise) | 323 | 0.58 |
| | | 6 = Never Used MJ (MMGETMJ=91,93) | 45545 | 82.40 |

The following "source of last used marijuana bought" variable, MJPBTFRM, is defined so that respondents with unknown data for how they got their last used marijuana (MMGETMJ) or whether they bought marijuana (MMBTPYR) in the past year are included in the "Source Unspecified" level, MJPBTFRM=4. To produce estimates among respondents who reported last obtaining marijuana by buying it or buying marijuana in the past year, the analysis should be restricted to MMGETMJ=1 or MMBTPYR=1.

| MJPBTFRM | Len: 1 | SOURCE OF LAST USED MARIJUANA BOUGHT | Freq | Pct |
|----------|--------|--|-------|-------|
| | | 1 = Friend (MMBUYWHO=1) | 4299 | 7.78 |
| | | 2 = Relative or Family Member (MMBUYWHO=2) | 269 | 0.49 |

| | | 4 = Source Unspecified (Otherwise) | 623 | 1.13 |
| | | 5 = Nevr Use MJ/Didn't Buy Last MJ (MMBUYWHO=91,93,99) | 49163 | 88.95 |

The following variable, MJPBTPL3, was assigned a positive response if the respondent reported buying their last used marijuana or buying marijuana in the past 12 months (MMGETMJ=1 OR MMBTPYR=1) and reported the corresponding location of buying the marijuana as noted in the level statements below (MMBPLACE/MMBPLOS2). A respondent was defined as buying last used marijuana from "Some Other Place", MJPBTPL3=7, if the location where the respondent reported being the last time he or she bought marijuana was some other place (MMBPLACE=6) and their write-in response was classified as a valid other-specify source other than "Medical Marijuana Dispensary/Club" (MMBPLOS2=7, 14, 17, 18, 21, 25, 26). MJPBTPL3 was assigned missing if a respondent did not report buying their last used marijuana (MMGETMJ=2, 3, 4, 85, 91, 93, 94, 97, 98) and the respondent did not report buying marijuana in the past year (MMBTPYR=2, 85, 91, 93, 94, 97, 98), and the location where the respondent reported being the last time he or she bought marijuana was unknown (MMBPLACE=85, 91, 93, 97, 98, 99).

| MJPBTPL3 | Len: 1 | LOCATION WHERE LAST USED MRJ WAS BOUGHT (8 LEVELS) | Freq | Pct |
|----------|--------|--|-------|-------|
| | | . = Didn't Buy Last MJ or MJ in PY (See comment above) | 49479 | 89.52 |
| | | 1 = Inside a Public Building (MMBPLACE=1,11) | 391 | 0.71 |
| | | 2 = Outside in Public Area (MMBPLACE=5,15)..... | 1326 | 2.40 |
| | | 3 = Inside School (MMBPLACE=2,12) | 89 | 0.16 |
| | | 4 = Outside on School Property (MMBPLACE=3,13) | 69 | 0.12 |
| | | 5 = Inside Home/Apt/Dorm (MMBPLACE=4,14) | 3096 | 5.60 |
| | | 6 = Medical Mrj Dispensary (MMBPLACE=6 & MMBPLOS2=15) | 106 | 0.19 |
| | | 7 = Some Other Place (See comment above) | 56 | 0.10 |
| | | 8 = Location Unspecified (Otherwise) | 659 | 1.19 |

The following "source of last used free marijuana" variable, MJPFREGT, is defined so that respondents with unknown data for how they got their last used marijuana (MMGETMJ) or whether they bought (MMBTPYR) or traded something (MMTRADE) for marijuana in the past year are included in the "Source Unspecified" level, MJPFREGT=4. This differs from the "location where last used free marijuana was received" variable, MJPFRPL2, where these unknown cases are defined as SAS missing (MJPFRPL2=.). To produce estimates among respondents who reported obtaining their last used marijuana for free and reported not buying or not trading something for marijuana in the past year, the analysis should be restricted to MMGETMJ=3 and MMBTPYR=2 and MMTRADE=2.

| MJPFREGT | Len: 1 | SOURCE OF LAST USED FREE MARIJUANA | Freq | Pct |
|----------|--------|--|-------|-------|
| | | 1 = Friend (MMFREWHO=1) | 2734 | 4.95 |
| | | 2 = Relative or Family Member (MMFREWHO=2) | 435 | 0.79 |
| | | 3 = Someone Just Met/Did Not Know (MMFREWHO=3)..... | 213 | 0.39 |
| | | 4 = Source Unspecified (Otherwise) | 391 | 0.71 |
| | | 5 = Nevr Use MJ/Didn't Get Free MJ (MMFREWHO=91,93,99) | 51498 | 93.17 |

RECODED MARIJUANA PURCHASES

The following variable, MJPFRPL2, was assigned a positive response if the respondent reported getting their last used marijuana for free and reported not buying or trading something for marijuana in the past 12 months (MMGETMJ=3 and MMBTPYR=2 and MMTRADE=2) and reported the corresponding location of getting the marijuana for free as noted in the level statements below (MMFPLACE/MMFPLOS2). MJPFRPL2 was assigned missing if at least one of the three criteria mentioned above was not met. A respondent was defined as getting their last used marijuana for free from "Some Other Place", MJPFRPL2=6, if the location where the respondent reported being the last time he or she got marijuana for free was some other place (MMFPLACE=6) and their write in response was classified as a valid other-specify source (MMFPLOS2=7, 14, 15, 17, 18, 21, 25, 26).

| MJPFRPL2 | Len: 1 LOCATION WHERE LAST USED FREE MRJ WAS RECEIVED | Freq | Pct |
|----------|--|-------|-------|
| . | = Didn't Get Free MJ (See comment above) | 51814 | 93.75 |
| 1 | = Inside a Public Building (MMFPLACE=1,11) | 98 | 0.18 |

| 6 | = Some Other Place (See comment above) | 51 | 0.09 |
| 7 | = Location Unspecified (Otherwise) | 321 | 0.58 |

PRIOR SUBSTANCE USE

PRIOR SUBSTANCE USE

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a¹.

NOTE: The variables MRJYRBFR and MRJAGLST were not edited with respect to one another. Therefore, inconsistencies could exist between these two variables.

Earlier questions were about the past 12 months. This question is about the year before that, that is, from [DATEFILL - 12 MONTHS] to [DATEFILL]. During that year, beginning [DATEFILL - 12 MONTHS] and ending [DATEFILL], did you use marijuana or hashish, even once?

NOTE: Data for STMAGLST, STIMYLU, and STIMMLU were edited for consistency with data for MTHAGLST, METHYLU, and METHMLU (see below) if respondents reported nonmedical use of methamphetamine in the core STIMULANTS module. In that context, nonmedical use of methamphetamine could include the prescription forms Desoxyn or Methedrine. Respondents in this survey year who reported methamphetamine use in the noncore SPECIAL DRUGS module also were asked questions about their last use of methamphetamine, without reference to prescription forms of the drug. STMAGLST, STIMYLU, and STIMMLU were not edited for consistency with data on the last use of methamphetamine for these additional noncore methamphetamine users. Consequently, STMAGLST, STIMYLU, and STIMMLU could indicate lifetime nonuse of "prescription" stimulants when the corresponding methamphetamine data in MTHAGLST, METHYLU, and METHMLU indicate that respondents were methamphetamine users. Therefore, documentation of codes for 81, 981, 9981, 91, 991, and 9991 in STMAGLST, STIMYLU, and STIMMLU specifically indicates that respondents had never used prescription stimulants nonmedically.

The computer recorded that you last used a prescription stimulant that was not prescribed for you or that you took only for the experience or feeling it caused [STREC FILL]. How old were you the last time you used any prescription stimulant in either of these ways?

Earlier, the computer recorded that, during the past 12 months, you used prescription pain relievers that were not prescribed for you or that you took only for the experience or feeling they caused.

Now think about the last time you used a prescription pain reliever that was not prescribed for you or that you took only for the experience or feeling it caused. How did you get this prescription pain reliever?

PRIOR SUBSTANCE USE

Earlier, the computer recorded that, during the past 12 months, you used prescription sedatives that were not prescribed for you or that you took only for the experience or feeling they caused.

Now think about the last time you used a prescription sedative that was not prescribed for you or that you took only for the experience or feeling it caused. How did you get this prescription sedative?

PRIOR SUBSTANCE USE

NOTE: Respondents were assigned legitimate skip codes of 99 or 89 in CIGYRBFR if they reported in the core TOBACCO module that they last smoked a cigarette more than 3 years ago. Logically, these respondents would not have smoked a cigarette in the past 12 to 24 months. In addition, CIGYRBFR was not edited with respect to CIGAGLST or CIGDLLST. Therefore, inconsistencies could exist between CIGYRBFR and these other variables.

Earlier questions were about the past 12 months. This question is about the year before that, that is, from [DATEFILL - 12 MONTHS] to [DATEFILL]. During that year, beginning [DATEFILL - 12 MONTHS] and ending [DATEFILL], did you smoke part or all of a cigarette, even once?

| CIGYRBFR ¹ | Len: 2 SMOKE ALL OR PART OF CIGARETTE IN YR BEFORE LAST | Freq | Pct |

RECODED PRIOR SUBSTANCE USE

RECODED PRIOR SUBSTANCE USE

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from the following two sections: Recoded Drug Use and Prior Substance Use.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

RECODED PRIOR SUBSTANCE USE

NOTE: The following five variables pertain to the source of a respondent's most recent nonmedical use of prescription pain relievers (ANLLTS2), prescription tranquilizers (TRNLTS2), prescription stimulants (STMLTS2), prescription sedatives (SEDLTS2), and methamphetamine (MTHLTSC4) within the past year.

For each variable, excluding MTHLTSC4, there are 11 mutually exclusive categories; 10 categories for specific sources and one category for those respondents who did not indicate using the drug in the past year. Since methamphetamine is not available by prescription, the first four categories are not applicable thus there are only seven mutually exclusive categories for MTHLTSC4; six sources and one category for non past year users. The categories for the specific sources take into account responses from past month users who indicated a single source during the past 30 days, past month users who indicated their most recent source after selecting multiple sources during the past 30 days, and past year users who indicated their most recent source of drug use.

Questions related to source of stimulant use pertain only to prescription stimulants and are not asked of respondents who were users of only methamphetamine, thus those respondents who indicated non-prescription stimulant use only (STMGTLA2=99) were classified as having "No Past Year Rx Use" (STMLTS2=11).

Based on the following conditions, a respondent was classified in one of the following 12 categories (including SAS missing) for the source of most recent prescription drug use in the past year for the variables, ANLLTS2, TRNLTS2, STMLTS2, and SEDLTS2:

1. Got From One Doctor (XXXGTLA2=1, 11 or only XXXRX1DR=1, 3, 5)
2. Got From More Than One Doctor (XXXGTLA2=2, 12 or only XXXRXDRS=1, 3, 5)
3. Wrote Fake Prescription (XXXGTLA2=3, 13 or only XXXRXFAK=1, 3, 5)
4. Stole from Dr Office, Clinic, Hospital, or Pharmacy (XXXGTLA2=4, 14 or only XXXSTOLE=1, 3, 5)
5. Got From Friend or Relative for Free (XXXGTLA2=5, 15 or only XXXFRFRE=1, 3, 5)
6. Bought from Friend or Relative (XXXGTLA2=6, 16 or only XXXFRBUY=1, 3, 5)
7. Took from Friend or Relative without Asking (XXXGTLA2=7, 17 or only XXXFRTKE=1, 3, 5)
8. Bought from Drug Dealer or Other Stranger (XXXGTLA2=8, 18 or only XXXDEALR=1, 3, 5)
9. Bought on the Internet (XXXGTLA2=9, 19 or only XXXINET=1, 3, 5)
10. Got Some Other Way ((XXXGTLA2=10 and XXXGTOS2=11-36, 39, 71) or (only XXXOTHWY=1, 3, 5 and XXXOTHS2=10,11-36, 39, 71))
11. No Past Year Use (XXXGTLA2=81, 89, 91, 93, 99)

(SAS Missing) Unknown/Invalid Source (XXXGTLA2=85, 94, 97, 98 or [XXXGTLA2=10 and XXXGTOS2=70, 72-75, 85, 94, 97, 98] or [XXXGTLA2=99 and only XXXOTHWY=1 and XXXOTHS2=70, 72-75, 85, 94, 97, 98])

The variable for the source of most recent methamphetamine use in the past year, MTHLTSC4, was defined by including respondents routed from the core Stimulants module as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

As indicated below, the imputed core-plus-noncore past year methamphetamine use variable (CPNMTHYR) was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. The categories were defined as follows:

5. From Friend or Relative for Free (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=5, 15 or only MTHFRFRE=1, 3, 5)
6. Bought from Friend or Relative (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=6, 16 or only MTHFRBUY=1, 3, 5)
7. Took from Friend or Relative without Asking (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=7, 17 or only MTHFRKTE=1, 3, 5)
8. Bought from Drug Dealer or Other Stranger (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=8, 18 or only MTHDEALR=1, 3, 5)
9. Bought on the Internet (Valid Past Year Use [CPNMTHYR=1] and MTHGTLA2=9, 19 or only MTHINET=1, 3, 5)
10. Some Other Way (Valid Past Year Use [CPNMTHYR=1] and [MTHGTLA2=10 and MTHGTOS2=10, 11-38, 71 or only MTHOTHWY=1, 3, 5 and MTHOTHS2=10, 11-38, 71])
11. No Lifetime or Past Year Use (CPNMTHYR=0)

(SAS Missing) Unknown/Invalid Source {Valid Past Year Use [CPNMTHYR=1] and ([MTHGTLA2=85, 93, 94, 97, 98] or [MTHGTLA2=10 and MTHGTOS2=70, 72, 73, 74, 75, 85, 94, 97, 98] or [MTHGTLA2=99 and only MTHOTHWY=1 and MTHOTHS2=70, 72, 73, 74, 85, 94, 97, 98])}

Please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings for more information.

RECODED PRIOR SUBSTANCE USE

NOTE: The following 46 variables were created to capture all a respondent's reported sources of past month prescription drug and methamphetamine (MTH) use. The prescription drugs include pain relievers (ANL), tranquilizers (TRN), stimulants (STM), and sedatives (SED).

NOTE: For the following 40 variables, to produce estimates among adults with past month prescription drug use, the analysis will need to be restricted by the specific past month prescription drug use variable (XXXMON=1).

The following variable, MTHOTHW2, was defined as yes if a respondent reported past month methamphetamine use (CPNMTHMN=1) and that friends/relatives got methamphetamine in "some other way" (MTHOTHWY=1, 3, 5) and their write-in response was classified as a valid other-specify source (MTHOTHS2=10, 11-38, 71). MTHOTHW2 was defined as no if a respondent reported past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) friends/relatives did not get methamphetamine in "some other way" (MTHOTHWY=6) or (2) friends/relatives got methamphetamine in "some other way" (MTHFFOTH=1, 3, 5) and their write-in response was classified as an invalid other-specify source (MTHOTHS2=5-9). MTHOTHW2 was recoded to SAS missing if a respondent indicated past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) the respondent indicated that during the past 30 days they got methamphetamine in "some other way" (MTHOTHWY=1, 3, 5) and their write-in response was classified as an invalid or unknown source (MTHOTHS2=70, 72-74, 85, 94, 97, 98) or (2) a response to getting methamphetamine "some other way" was unknown (MTHOTHWY=85, 93, 94, 97, 98).

RECODED PRIOR SUBSTANCE USE

NOTE: In the questionnaire, a respondent who used methamphetamine and prescription drugs in the past month was administered a question regarding the source of their past month use. Any respondent who gave multiple past month sources or was a past year user was administered a question regarding the source of the drug during their most recent use. If they indicated that their most recent source was a 'friend or relative for free' from either of these questions, then a respondent was administered a follow-up question that asked the source the friend/relative had obtained the drug from. The following 5 variables pertain to the source from which a respondent's friend or relative obtained the drug for prescription pain relievers (ANLSCRF2), prescription tranquilizers (TRNSRCF2), prescription stimulants (STMSRCF2), prescription sedatives (SEDSRCF2), and methamphetamine (MTHSRCF2) within the past year. These 5 variables are similar to the previously defined source of a respondent's friend or relative's most recent nonmedical use variables (XXSRCFR) with the exception that SAS missing and level 11 have been combined into a single SAS missing level. Starting with the 2014 NSDUH, this version will be the only version available.

For each variable, excluding MTHSRCF2, there are 10 mutually exclusive categories for specific sources. Since methamphetamine is not available by prescription, the first 4 categories are not applicable thus there are only 6 mutually exclusive categories for MTHSRCF2. The categories for the specific sources take into account responses from past month users who indicated a single source during the past 30 days, past month users who indicated their most recent source after indicating multiple sources during the past 30 days, and past year users who indicated their most recent source of drug use.

Questions related to source of stimulant use pertain only to prescription stimulants and are not asked of respondents who were users of only methamphetamine, thus those respondents who indicated non-prescription stimulant use only (STMGTLA2=99) were classified as having "No Lifetime or Past Year Rx Use" (STMSRCF2=-).

Based on the following conditions, a respondent was classified in one of the following 11 categories for the source of most recent prescription drug use in the past year for the variables, ANLSCRF2, TRNSRCF2, STMSRCF2, and SEDSRCF2:

1. Got from One Doctor ((XXGTLA2=5 and XXXFFLAS=1, 11) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFF1DR=1, 3, 5))
2. Got from More Than One Doctor ((XXGTLA2=5 and XXXFFLAS=2, 12) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFDRS=1, 3, 5))
3. Wrote Fake Prescription ((XXGTLA2=5 and XXXFFLAS=3, 13) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFAKE=1, 3, 5))
4. Stole from Dr Office, Clinic, Hospital, or Pharmacy ((XXGTLA2=5 and XXXFFLAS=4, 14) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFSTL=1, 3, 5))
5. Got from Friend or Relative for Free ((XXGTLA2=5 and XXXFFLAS=5, 15) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFREE=1, 3, 5))
6. Bought from Friend or Relative ((XXGTLA2=5 and XXXFFLAS=6, 16) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFBOT=1, 3, 5))
7. Took from Friend or Relative without Asking ((XXGTLA2=5 and XXXFFLAS=7, 17) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFTAK=1, 3, 5))
8. Bought from Drug Dealer or Other Stranger ((XXGTLA2=5 and XXXFFLAS=8, 18) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFDLR=1, 3, 5))
9. Bought on the Internet ((XXGTLA2=5 and XXXFFLAS=9, 19) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and only XXXFFNET=1, 3, 5))
10. Got Some Other Way ((XXGTLA2=5 and XXXFFLAS=10 and XXXFFLSP=valid "other" response, levels 11-36, 71) or (XXGTLA2=89, 99, 15 and XXXFRFRE=1, 3, 5 and XXXFFOTH=1, 3, 5 and XXXFFOSP=valid "other" response, levels 11-36, 71))

RECODED PRIOR SUBSTANCE USE

Due to the outcome of the 2006 Methamphetamine Analysis Study, the variable for a friend or relative's source of methamphetamine for the respondent's most recent methamphetamine use in the past year when they reported they received this most recent drug from a friend or relative for free, MTHSRCF2, was defined by including respondents routed from the core Stimulants module, as well as respondents routed from the noncore Special Drugs module who reported they did not think of methamphetamine as a prescription drug when asked about use in the core Stimulants module.

As shown below, the imputed recency variable, CPNMTHYR, was used in conjunction with the edited source variables to determine a respondent's source for most recently used methamphetamine based on past year use as defined from both the core Stimulants module and legitimate responses from the noncore Special Drugs module, as previously stated. Please see Appendix B.4.8 of the Results from the 2008 NSDUH: National Findings for more information.

5. From Friend or Relative for Free {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=5, 15] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and only MTHFFFREE=1, 3, 5] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=5])}
6. Bought from Friend or Relative {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=6, 16] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and only MTHFFBOT=1, 3, 5] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=6])}
7. Took from Friend or Relative without Asking {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=7, 17] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and only MTHFFTAK=1, 3, 5] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=7])}
8. Bought from Drug Dealer or Other Stranger {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=8, 18] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and only MTHFFDLR=1, 3, 5] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=8])}
9. Bought on the Internet {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=9, 19] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and only MTHFFNET=1, 3, 5] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=9])}
10. Some Other Way {CPNMTHYR=1 and ([MTHGTLA2=5, 15 and MTHFFLAS=10 and MTHFFLSP=valid "other" response, levels 11-36, 71] or [MTHGTLA2=89, 99 and MTHFRFRE=1, 3, 5 and MTHFFOTH=1, 3, 5 and MTHFFOSP=valid "other" response, levels 11-36, 71])}

(SAS Missing) No Past Year Use or Valid Source of Most Recent Use Not From Friend or Relative for Free or Unknown/Invalid Source (Otherwise)

NOTE: The following 46 variables were created to capture all a respondent's friend or relative's reported source of past month prescription drug and methamphetamine (MTH) use. The prescription drugs include pain relievers (ANL), tranquilizers (TRN), stimulants (STM), and sedatives (SED).

NOTE: For the following 40 variables, to produce estimates among adults with past month prescription drug use, the analysis will need to be restricted by the specific past month prescription drug use variable (XXXMON=1).

RECODED PRIOR SUBSTANCE USE

The following variable, MTHFFOT2, was defined as yes if a respondent reported past month methamphetamine use (CPNMTHMN=1) and that friends/relatives got methamphetamine in "some other way" (MTHFFOTH=1, 3, 5) and their write-in response was classified as a valid other-specify source (MTHFFOSP=11-38, 71). MTHFFOT2 was defined as no if a respondent reported past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) that friends/relatives did not get methamphetamine in "some other way" (MTHFFOTH=6) or (2) that friends/relatives got methamphetamine in "some other way" (MTHFFOTH=1, 3, 5) and their write-in response was classified as an invalid other-specify source (MTHFFOSP=5-9). MTHFFOT2 was recoded to SAS missing if a respondent indicated past month methamphetamine use (CPNMTHMN=1) and either of these situations occurred: (1) the respondent indicated that during the past 30 days they got methamphetamine in "some other way" (MTHFFOTH=1, 3, 5) and their write-in response was classified as an invalid or unknown source (MTHFFOSP=70, 72-75, 85, 94, 97, 98), or (2) a response to friends/relatives getting methamphetamine in "some other way" was unknown (MTHFFOTH=85, 93, 94, 97, 98, 99).

SUBSTANCE TREATMENT

SUBSTANCE TREATMENT

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

NOTE: Respondents were not asked questions in the SUBSTANCE TREATMENT module if they did not report lifetime use of alcohol, marijuana, cocaine, heroin, hallucinogens, inhalants, methamphetamine, or lifetime use of prescription psychotherapeutics (pain relievers, tranquilizers, stimulants, or sedatives) for nonmedical reasons. Codes of 81 or 91 in the edited SUBSTANCE TREATMENT variables indicate that the questions did not apply because respondents were nonusers of all of these substances.

These next questions deal with treatment for alcohol and drug problems, not including cigarettes. Please report treatment or counseling designed to help you reduce or stop your alcohol or drug use. Please include detoxification and any other treatment for medical problems associated with your alcohol or drug use.

Have you ever received treatment or counseling for your use of alcohol or any drug, not counting cigarettes?

NOTE: NDTXEFTR was assigned a code of 11 if the respondent originally reported making an effort to obtain treatment but at least one of the following occurred: (a) the respondent was logically inferred to have gotten treatment in the past 12 months (TXYREVER=3); or (b) the respondent did not perceive a need for treatment for use of any of the specific drugs that he/she was asked about (i.e., all questions about the perceived need for treatment for specific drugs were answered as "no").

During the past 12 months, did you make an effort to get treatment or counseling for your use of [TXFILL2]?

SUBSTANCE TREATMENT

NOTE: For most of the remaining questions in the SUBSTANCE TREATMENT module, the wording differed depending on whether respondents previously reported that they were still in treatment or that they were no longer in treatment. Where two question wordings appear for a given variable, the first wording was what respondents received if they reported that they were no longer in treatment. The second wording was what respondents received if they reported that they were still in treatment.

What was the main place where you received treatment the last time you started treatment for your alcohol or other drug use, not counting cigarettes?

What is the main place where you are currently receiving treatment for your alcohol or other drug use, not counting cigarettes?

NOTE: The variables TXALONEV, TXALONAG, TXDRONEV, TXDRONAG, TXALCDEV, TXALCDAG, TXDRGAEV, and TXDRGAAG pertain to respondents who were lifetime recipients of substance treatment but who had not received treatment in the past year.

TXALONEV and TXALONAG pertain to respondents who were lifetime alcohol users but had not reported lifetime use of other drugs.

TXDRONEV and TXDRONAG pertain to respondents who did not report lifetime use of alcohol but reported lifetime use of other drugs. TXALCDEV, TXALCDAG, TXDRGAEV, and TXDRGAAG pertain to respondents who were lifetime users of alcohol and other drugs.

NOTE: TXALONEV was assigned a value of 11 or 12 when respondents originally reported that they had not received treatment in the past 12 months but they were logically inferred to have received treatment in that period (TXYREVER=3). Respondents who themselves reported that they had gotten treatment in the past 12 months were asked a different set of questions. However, respondents who reported that they had ever received treatment for their use of alcohol but were logically inferred to have gotten treatment in the past 12 months cannot be inferred to have received alcohol treatment in that period (TXALONEV=11). TXALONEV was assigned a value of 22 when respondents were lifetime users of alcohol but had never used (or misused) marijuana, cocaine, heroin, hallucinogens, inhalants, prescription psychotherapeutics (pain relievers, tranquilizers, stimulants, or sedatives), and they reported that they had never received treatment for their use of alcohol.

Earlier you reported that at some time in your life you received treatment or counseling for your use of alcohol or any drug, not counting cigarettes. Have you ever received treatment for your alcohol use?

The next question is about self-help groups. Some examples of self-help groups for alcohol or drug use are AA or Alcoholics Anonymous, NA or Narcotics Anonymous, CA or Cocaine Anonymous, and CMA or Crystal Meth Anonymous.

During the past 12 months, did you go to any self-help group meetings or 12-step programs to receive help for your own use of alcohol or any drug, not counting cigarettes?

| TX12MSHG ¹ | Len: 2 WENT TO SELF-HELP GRP/12-STEP PGMS PAST 12 MOS | | Freq | Pct |
|-----------------------|---|--|-------|-------|
| | 1 = Yes | | 586 | 1.06 |
| | 2 = No..... | | 41068 | 74.30 |
| | 5 = Yes LOGICALLY ASSIGNED (from skip pattern) | | 453 | 0.82 |
| | 81 = NEVER USED ALCOHOL OR DRUGS Logically assigned | | 32 | 0.06 |
| | 85 = BAD DATA Logically assigned | | 1 | 0.00 |
| | 91 = NEVER USED ALCOHOL OR DRUGS..... | | 12721 | 23.02 |
| | 94 = DON'T KNOW..... | | 55 | 0.10 |
| | 97 = REFUSED | | 75 | 0.14 |
| | 98 = BLANK (NO ANSWER)..... | | 280 | 0.51 |

Did you go to the self-help group because of your alcohol use only, your drug use only, or because of both alcohol and drug use?

| TX12SGAD ¹ | Len: 2 WENT TO SELF-HELP GRP FOR ALC ONLY/DRUG ONLY/BOTH | | Freq | Pct |
|-----------------------|---|--|-------|-------|

| | 98 = BLANK (NO ANSWER)..... | | 362 | 0.65 |
| | 99 = LEGITIMATE SKIP | | 41335 | 74.79 |

SUBSTANCE TREATMENT

NOTE: TXSHGFLG compares the consistency of data in the self-help group variable TX12MSHG and the self-help group variable TXYRSHG. TXSHGFLG has a value of 1 when TX12MSHG was answered as "yes" but TXYRSHG indicates that respondents did not receive treatment in a self-help group, even though they reported that they received treatment in the past 12 months. TXSHGFLG has a value of 2 when TX12MSHG was answered as "yes" but TXYREVER or TXEVER indicated that respondents never received any treatment in the past 12 months or lifetime, respectively. TXSHGFLG has a value of 3 when TX12MSHG was not answered as "yes" but TXYRSHG indicates that respondents were logically inferred to have gotten treatment in a self-help group in the past 12 months. TXSHGFLG has a value of 4 when TX12MSHG was answered as "yes" but TXYRSHG was answered as "don't know" or "refused" or it was blank. Finally, TXSHGFLG has a value of 5 when TX12MSHG was answered as "don't know" or "refused" but TXYRSHG was answered as "no."

| TXSHGFLG ¹ | Len: 2 CONSISTENCY FLAG BETWEEN TX12MSHG AND TXYRSHG | Freq | Pct |

RECODED SUBSTANCE TREATMENT

RECODED SUBSTANCE TREATMENT

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The variables in this section are recoded variables that were created from one or more of the variables from two of the preceding sections: Substance Treatment or Recoded Substance Dependence and Abuse.

NOTE: Respondents who were routed into the Drug Treatment module based solely on their responses from the Special Drugs module questions were classified as not receiving substance use treatment.

NOTE: The following seven recoded variables contain information about receiving treatment at any location in lifetime or in the past year.

| | | | |
|----------|--|-------------|------------|
| TXILALEV | Len: 1 RECEIVED TREATMENT FOR DRG OR ALC USE IN LIFETIME | Freq | Pct |

| | 1 = Yes (TXYRADG=2,3,5,6,11,12) | 620 | 1.12 |

A respondent was classified as receiving treatment at any location in the past year for alcohol use but not illicit drug use, TXALNOIL, if they received only alcohol use treatment at any location in the past year (TXYRADG=1). Respondents with unknown illicit drug use treatment (TXYRADG=4) or who reported receiving alcohol use treatment only but in later treatment questions indicated receiving illicit drug use treatment (TXYRADG=11) are not classified as receiving treatment for alcohol use only.

|-----------------|--|--|-------------|------------|
| SPECTILL | Len: 1 RCV'D TRMT AT SPEC FAC FOR ILL DRG - PST YR | | Freq | Pct |
| | 0 = No/Unknown (Otherwise)..... | | 54850 | 99.24 |
| | 1 = Yes (See comment above)..... | | 421 | 0.76 |

RECODED SUBSTANCE TREATMENT

A respondent was classified as receiving treatment in the past year for alcohol use but not illicit drug use at a specialty facility, SPCALNIL, that is a hospital (inpatient), a rehabilitation facility (in or outpatient), or at a mental health center if they met one of the following conditions:

1. Reported receiving only alcohol treatment in the past year (TXYRADG=1) and that treatment was received at a specialty facility (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81).
2. Reported receiving only alcohol treatment in the past year but also reported receiving treatment for illicit drug use during their last or current treatment (TXYRADG=11), the reported alcohol treatment was received at one of the four specialty facilities (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81), and their last or current treatment was not at one of the four specialty facilities (LASTTXSP=0).
3. Reported receiving both illicit drug and alcohol treatment in the past year (TXYRADG=3, 6) and reported specifically receiving only alcohol treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD=1 or TXYRINAD=1 or TXYRPOAD=1 or TXYRMHAD=1 or (TXYROTAD=1 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81)) but did not report specifically receiving illicit drug treatment or illicit drug and alcohol treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD NE 2, 3 or TXYRINAD NE 2, 3 or TXYRPOAD NE 2, 3 or TXYRMHAD NE 2, 3 or (TXYROTAD NE 2, 3 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81) or TXYROTS2 NE 1-4, 45, 46, 56, 64, 76, 81).

For the logically assigned levels of TXYRADG, the creation of this variable may be unclear; therefore, details for classifying respondents as not receiving alcohol only treatment at a specialty facility for these logically assigned levels are below:

1. Reported receiving alcohol treatment in the past year but illicit drug treatment status is unknown (TXYRADG=4) or reported receiving illicit drug treatment in the past year but alcohol treatment status is unknown (TXYRADG=5).
2. Reported receiving only illicit drug treatment in the past year but also reported receiving treatment for alcohol during their last or current treatment (TXYRADG=12).
3. Reported receiving only alcohol treatment in the past year but also reported receiving treatment for illicit drug use during their last or current treatment (TXYRADG=11) and the reported alcohol treatment was not at a specialty facility (TXYRHOSP=2, 94, 97, 98 and TXYRRFIN=2, 94, 97, 98 and TXYRFOP=2, 94, 97, 98 and TXYRMHC=2, 94, 97, 98 and TXYROTS2 NE 1-4, 45, 46, 56, 64, 76, 81).
4. Reported receiving only alcohol treatment in the past year but also reported receiving treatment for illicit drug use during their last or current treatment (TXYRADG=11) and their reported alcohol treatment was at a specialty facility (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81) but their last or current treatment was at a specialty facility (LASTTXSP=1) and included treatment for illicit drug use.

| SPCALNIL | Len: 1 RCV'D TRMT AT SPEC FAC FOR ALC NOT ILL DRG - PST YR | Freq | Pct |

| | 1 = Yes (See comment above)..... | 156 | 0.28 |

RECODED SUBSTANCE TREATMENT

A respondent was classified as receiving treatment in the past year for illicit drug use but not alcohol use at a specialty facility, SPCILNAL, that is a hospital (inpatient), a rehabilitation facility (in or outpatient), or at a mental health center if they met one of the following conditions:

1. Reported receiving only illicit drug treatment in the past year (TXYRADG=2) and that treatment was received at a specialty facility (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81).
2. Reported receiving only illicit drug treatment in the past year but also reported receiving treatment for alcohol use during their last or current treatment (TXYRADG=12), the reported illicit drug treatment was received at one of the four specialty facilities (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81), and their last or current treatment was not at one of the four specialty facilities (LASTTXSP=0).
3. Reported receiving both illicit drug and alcohol treatment in the past year (TXYRADG=3, 6) and reported specifically receiving only illicit drug treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD=2 or TXYRINAD=2 or TXYRPOAD=2 or TXYRMHAD=2 or (TXYROTAD=2 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81)) but did not report specifically receiving alcohol treatment or illicit drug and alcohol treatment at one of the four specialty facilities in the follow-up questions (TXYRHPAD NE 1, 3 or TXYRINAD NE 1, 3 or TXYRPOAD NE 1, 3 or TXYRMHAD NE 1, 3 or (TXYROTAD NE 1, 3 and TXYROTS2=1-4, 45, 46, 56, 64, 76, 81) or TXYROTS2 NE 1-4, 45, 46, 56, 64, 76, 81).

For the logically assigned levels of TXYRADG, the creation of this variable may be unclear; therefore, details for classifying respondents as not receiving illicit drug only treatment at a specialty facility for these logically assigned levels are below:

1. Reported receiving alcohol treatment in the past year but illicit drug treatment status is unknown (TXYRADG=4) or reported receiving illicit drug treatment in the past year but alcohol treatment status is unknown (TXYRADG=5).
2. Reported receiving only alcohol treatment in the past year but also reported receiving treatment for illicit drugs during their last or current treatment (TXYRADG=11).
3. Reported receiving only illicit drug treatment in the past year but also reported receiving treatment for alcohol use during their last or current treatment (TXYRADG=12) and the reported illicit drug treatment was not at a specialty facility (TXYRHOSP=2, 94, 97, 98 and TXYRRFIN=2, 94, 97, 98 and TXYRFOP=2, 94, 97, 98 and TXYRMHC=2, 94, 97, 98 and TXYROTS2 NE 1-4, 45, 46, 56, 64, 76, 81).
4. Reported receiving only illicit drug treatment in the past year but also reported receiving treatment for alcohol use during their last or current treatment (TXYRADG=12) and their reported illicit drug treatment was at a specialty facility (TXYRHOSP=1, 3, 5 or TXYRRFIN=1, 3, 5 or TXYRFOP=1, 3, 5 or TXYRMHC=1, 3, 5 or TXYROTS2=1-4, 45, 46, 56, 64, 76, 81) but their last or current treatment was at a specialty facility (LASTTXSP=1) and included treatment for alcohol use.

RECODED SUBSTANCE TREATMENT

NOTE: The following 24 recoded variables contain information about where a respondent received treatment in the past year.

NOTE: The following eight recoded variables contain information about where a respondent received alcohol treatment in the past year.

A respondent received treatment for alcohol use in the past year at the specified location if they met either of these conditions:

1. Received treatment in the past 12 months for both illicit drug and alcohol use (TXYRADG=3, 6) and reported a positive response to the specific treatment location (TXYRXXXX=1, 3, 5) and reported receiving treatment at the specific location for alcohol use or both illicit drug and alcohol use (TXYRXXAD=1, 3).
2. Received treatment in the past 12 months for alcohol use only (TXYRADG=1, 4, 11) and reported a positive response to the specific treatment location (TXYRXXX=1, 3, 5).

NOTE: The following three recoded variables contain information about a respondent's need for treatment in the past year.

A respondent was classified as needing treatment for alcohol use in the past year, TXNEDALC, if they met any one of the following three criteria:

1. Dependent on alcohol in the past year (DEPNDALC=1).
2. Alcohol abuse in the past year (ABUSEALC=1).
3. Received treatment for alcohol use at a specialty facility in the past year including a hospital (inpatient), rehabilitation facility (in or outpatient), or mental health center (SPECTALC=1).

RECODED SUBSTANCE TREATMENT

A respondent was classified as needing treatment for illicit drug or alcohol use in the past year, TXNDILAL, if they met any one of the following three criteria:

1. Dependent on any illicit drug or alcohol in the past year (DPILLALC=1).
2. Illicit drug or alcohol abuse in the past year (ABILLALC=1).
3. Received treatment for illicit drug or alcohol use at a specialty facility in the past year including a hospital (inpatient), rehabilitation facility (in or outpatient), or mental health center (SPILLALC=1).

| TXNDILAL | Len: 1 NEEDED TREATMENT FOR ILL DRG OR ALC USE - PST YR | Freq | Pct |
|----------|--|-------|-------|
| | 0 = No/Unknown (Otherwise)..... | 49813 | 90.13 |
| | 1 = Yes (See comment above)..... | 5458 | 9.87 |

NOTE: The following three recoded variables contain information about respondents feeling a need for treatment in the past year.

A respondent was classified as feeling a need for alcohol treatment in the past year, FLTNDALC, if they met either of these conditions:

1. Reported feeling a need for treatment for alcohol in the past year (NDTXNEDR=1, 11, 13 and NDTXALCR=1, 3, 11, 13).
2. Reported feeling a need for ADDITIONAL treatment for alcohol in the past year (NDTXMORE=1 and NDTMRALC=1).

| FLTNDALC | Len: 1 FELT NEED FOR TRMT FOR ALCOHOL USE - PST YR | Freq | Pct |
|----------|---|-------|-------|
| | 1 = Yes (See comment above)..... | 146 | 0.26 |
| | 2 = No/Unknown (Otherwise)..... | 55125 | 99.74 |

A respondent was classified as feeling a need for illicit drug treatment in the past year, FLTNDILL, if they met either of these conditions:

1. Reported feeling a need for treatment for one or more illicit drugs in the past year, specifically including marijuana (NDTXNEDR=1, 11, 13 and NDTXMJR=1, 3, 11, 13), cocaine (NDTXNEDR=1, 11, 13 and NDTXCOCR=1, 3, 11, 13), heroin (NDTXNEDR=1, 11, 13 and NDTXHERR=1, 3, 11, 13), hallucinogens (NDTXNEDR=1, 11, 13 and NDTXHALR=1, 3, 11, 13), inhalants (NDTXNEDR=1, 11, 13 and NDTXINHR=1, 3, 11, 13), pain relievers (NDTXNEDR=1, 11, 13 and NDTXANLR=1, 3, 11, 13), tranquilizers (NDTXNEDR=1, 11, 13 and NDTXTRNR=1, 3, 11, 13), stimulants (NDTXNEDR=1, 11, 13 and NDTXSTMR=1, 3, 11, 13), sedatives (NDTXNEDR=1, 11, 13 and NDTXSEDR=1, 3, 11, 13), or some other drug (NDTXNEDR=1, 11, 13 and NDTXSODR=1, 3, 5, 11, 13).
2. Reported feeling a need for ADDITIONAL treatment for one or more illicit drugs in the past year, specifically including marijuana (NDTXMORE=1 and NDTMRMJ=1), cocaine (NDTXMORE=1 and NDTMRMOC=1), heroin (NDTXMORE=1 and NDTMRHER=1), hallucinogens (NDTXMORE=1 and NDTMRHAL=1), inhalants (NDTXMORE=1 and NDTMRINH=1), pain relievers (NDTXMORE=1 and NDTMRANL=1), tranquilizers (NDTXMORE=1 and NDTMRTRN=1), stimulants (NDTXMORE=1 and NDTMRSTM=1), sedatives (NDTXMORE=1 and NDTMRSED=1), or some other drug (NDTXMORE=1 and NDTMROTH=1).

| FLTNDILL | Len: 1 FELT NEED FOR TRMT FOR ILLICIT DRUG USE - PST YR | Freq | Pct |

| | 2 = No/Unknown (Otherwise) | 54969 | 99.45 |

NOTE: The following three variables pertain to respondents feeling a need and making an effort to obtain treatment in the past year.

NOTE: A respondent was classified as feeling a need for substance use treatment and making an effort to get substance use treatment in the past year, NDEFXXX=1, if they felt a need for treatment for their substance use (FLTNDXXX=1) and if they met either of the following conditions:

1. Reported making an effort to get treatment (NDTXEFTR=1, 11).
2. Reported making an effort to get ADDITIONAL treatment (NDTMREFT=1).

A respondent was classified as feeling a need for and NOT making an effort to get substance use treatment in the past year, NDEFXXX=2, if they felt a need for treatment for their substance use (FLTNDXXX=1) and if they met either of the following conditions:

1. Reported NOT making an effort to get treatment (NDTXEFTR=2, 12, 99).
2. Reported NOT making an effort to get ADDITIONAL treatment (NDTMREFT=2, 98, 99).

| | 98 = BLANK (NO ANSWER)..... | 13 | 0.02 |

NOTE: HTINCHE2 was recoded to inches from reports of heights in feet and inches, meters and centimeters, or centimeters only. Heights in meters and centimeters first were converted to centimeters. For respondents who chose to report their height in metric units, a conversion factor was applied of 0.393701 inches to 1 centimeter to produce a height in inches. HTINCHE2 was then rounded to the nearest integer and top coded at 75 inches and bottom coded at 55 inches.

About how tall are you, without shoes? First, please type in the number of feet, then press [ENTER].

Please type in the number of inches and then press [ENTER].

About how tall are you, without shoes? First, please type in the number of meters, then press [ENTER].

NOTE: Beginning in 2014, respondents are not asked the question corresponding to HPQTTOB if they were lifetime but not past year users of tobacco products. If respondents reported that they last smoked cigarettes, used smokeless tobacco, or smoked cigars more than 12 months prior to their interview date and that they never smoked tobacco in a pipe, codes of 93 in HPQTTOB indicate that these respondents had not used tobacco products in the past 12 months. However, respondents who smoked tobacco in a pipe in their lifetime were asked whether they did so in the past 30 days but they were not asked whether they smoked tobacco in a pipe more than 30 days ago but within the past 12 months. Therefore, the code of 93 in HPQTTOB also applied to respondents who smoked tobacco in a pipe in their lifetime but not in the past 30 days and who last used other tobacco products more than 12 months ago (or never used other tobacco products). If respondents reported never using tobacco products or not using them in the past 12 months (including not smoking tobacco in a pipe in the past 30 days) and also that they did not have any health care visits in the past 12 months (emergency room visits, overnight hospitalizations, or outpatient visits), indication that these respondents had not used tobacco products in the past 12 months or in their lifetime (as indicated by codes of 91 or 93) took precedence over assignment of codes to indicate that these respondents did not have any health care visits in the past 12 months. Codes of 89 or 99 in HPQTTOB applied to respondents who used tobacco products in the past 12 months or whose status as a tobacco user in the past 12 months was unknown but who did not have any health care visits in the past 12 months.

During the past 12 months, did any doctor or other health care professional advise you to quit smoking cigarettes or quit using any other tobacco products?

| | | | |

PREGNANCY AND HEALTH CARE

NOTE: In HPALCAMT, HPALCFRQ, HPALCPRB, HPALCCUT, HPALCTX, and HPALCNOT, if respondents reported never using alcohol or not using it in the past 12 months and also that they did not have any health care visits in the past 12 months (emergency room visits, overnight hospitalizations, or outpatient visits), indication that respondents never used alcohol or did not use it in the past 12 months (as indicated by codes of 91 or 93) took precedence over assignment of codes to indicate that these respondents did not have any health care visits in the past 12 months. Codes of 99 in these variables applied to respondents who used alcohol in the past 12 months or whose status as a past year alcohol user was unknown but who did not have any health care visits in the past 12 months.

Please think about all of the talks you have had with a doctor or other health care professional during the past 12 months when you answer this question. NOTE: In HPDRGTLK, if respondents reported never using marijuana, cocaine (including crack), heroin, hallucinogens, inhalants, or methamphetamine or not using these substances in the past 12 months and also that they did not have any health care visits in the past 12 months (emergency room visits, overnight hospitalizations, or outpatient visits), indication that respondents never used these drugs or last used any of them more than 12 months ago (as indicated by codes of 91 or 93) took precedence over assignment of codes to indicate that these respondents did not have any health care visits in the past 12 months. Codes of 99 in HPDRGTLK applied to respondents who used any of these drugs in the past 12 months or whose status as a past year user was unknown but who did not have any health care visits in the past 12 months. Also, a small number of respondents were routed to the question corresponding to HPDRGTLK but after the variables for most recent use of these drugs had been edited, it was determined that the respondents never used these drugs or that they last used any of them more than 12 months ago. If respondents reported that a health professional discussed their drug use with them in the past 12 months but the edited variables for most recent use of these substances indicated that respondents never used any of them, then HPDRGTLK was assigned a code of 11; otherwise, data in HPDRGTLK were overwritten with a code of 81. If respondents reported that a health professional discussed their drug use with them in the past 12 months but the edited variables for most recent use of these substances indicated that most recent use occurred more than 12 months ago, then HPDRGTLK was assigned a code of 21; otherwise, data in HPDRGTLK were overwritten with a code of 83.

During the past 12 months, did any doctor or other health care professional talk to you about your use of [MARIJUANA/COCAINE/CRACK/HEROIN/INHALANTS/HALLUCINOGENS/METHAMPHETAMINE]?

RECODED PREGNANCY AND HEALTH CARE

RECODED PREGNANCY AND HEALTH CARE

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

ADULT MENTAL HEALTH TREATMENT

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

These next questions are about treatment and counseling for problems with emotions, nerves or mental health. Please do not include treatment for alcohol or drug use.

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

During the past 12 months, have you stayed overnight or longer in a hospital or other facility to receive treatment or counseling for any problem you were having with your emotions, nerves, or mental health? Please do not include treatment for alcohol or drug use.

NOTE: This variable incorporates the value from a probe question that was asked when the respondent answered REFUSED to this question.

The list below includes some of the places where people can get outpatient treatment or counseling for problems with their emotions, nerves, or mental health.

During the past 12 months, did you receive any outpatient treatment or counseling for any problem you were having with your emotions, nerves, or mental health at any of the places listed below? Please do not include treatment for alcohol or drug use.

- An outpatient mental health clinic or center
- The office of a private therapist, psychologist, psychiatrist, social worker, or counselor that was not part of a clinic
- A doctor's office that was not part of a clinic
- An outpatient medical clinic
- A partial day hospital or day treatment program
- Some other place

ADULT MENTAL HEALTH TREATMENT

Earlier, we asked whether you have received prescription medicines, inpatient treatment or outpatient treatment for your emotions, nerves or mental health. The list below contains possible sources of treatment, counseling or support that were not mentioned before.

Acupuncturist or acupressurist
 Chiropractor
 Herbalist
 In-person support group or self-help group
 Internet support group or chat room
 Spiritual or religious advisor, such as a pastor, priest, rabbi
 Telephone hotline
 Massage therapist

Did you receive treatment, counseling or support from any other sources such as these during the past 12 months?

RECODED ADULT MENTAL HEALTH TREATMENT

RECODED ADULT MENTAL HEALTH TREATMENT

NOTE: The variables in this section are recoded variables that were created from one or more variables from the following sections: Adult Mental Health Treatment and Recoded Substance Treatment.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

| AMHINP2 | Len: 1 | RCVD INPATIENT MENTAL HEALTH TRT IN PST YR | Freq | Pct |
|---------|--------|--|-------|-------|
| | | . = Unknown/Aged 12-17/Log Assign Yes (Otherwise)..... | 13717 | 24.82 |
| | | 1 = Yes (AUINPYR=1)..... | 439 | 0.79 |
| | | 2 = No (AUINPYR=2)..... | 41115 | 74.39 |

The following variable, AMHOUTP3, is defined as SAS missing if a respondent reported receiving outpatient mental health treatment/counseling in the past year at "Some Other Place" (AUOPTYR=1, 3 and only AUOPOTOP=1, 3) and their write-in response was classified as an invalid outpatient mental health treatment/counseling location or alternative treatment/support (AUOPYRS2=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73). In addition to the responses described above, respondents aged 12-17 and those coded as bad data, legitimate skip, don't know, refused, or blank (AUOPTYR=85, 89, 94, 97, 98, 99) were also defined as SAS missing. A respondent was assigned a positive response if they indicated they had received outpatient mental health treatment/counseling in the past year (AUOPTYR=1, 3) and they did not indicate an alternative source or invalid outpatient location (AUOPYRS2 not=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73) as their only location for outpatient treatment.

| | | 1 = Yes (AURXYR=1) | 5195 | 9.40 |
| | | 2 = No (AURXYR=2) | 36337 | 65.74 |

| AMHTXRC3 | Len: 1 | RCVD ANY MENTAL HEALTH TRT IN PST YR | Freq | Pct |
|----------|--------|--|-------|-------|
| | | . = Unknown/Aged 12-17 (Otherwise) | 13805 | 24.98 |
| | | 1 = Yes (AMHINP2=1 OR AMHOUTP3=1 OR AMHRX2=1)..... | 6245 | 11.30 |
| | | 2 = No (AMHINP2=2 AND AMHOUTP3=2 AND AMHRX2=2) | 35221 | 63.72 |

The following variable, AMHSVTYP, classifies what type of mental health treatment/counseling was received in the past year. Respondents who reported receiving treatment for mental health were classified in one of seven mutually exclusive categories. A respondent was assigned to level one if they reported receiving inpatient treatment only (AMHINP2=1 and AMHOUTP3=2 and AMHRX2=2), to level two if they reported receiving outpatient treatment only (AMHINP2=2 and AMHOUTP3=1 and AMHRX2=2), to level three if they reported receiving prescription medication treatment only (AMHINP2=2 and AMHOUTP3=2 and AMHRX2=1), to level four if they reported receiving both inpatient and outpatient treatment only (AMHINP2=1 and AMHOUTP3=1 and AMHRX2=2), to level five if they reported receiving inpatient and prescription medication treatment only (AMHINP2=1 and AMHOUTP3=2 and AMHRX2=1), to level six if they reported receiving outpatient and prescription medication treatment only (AMHINP2=2 and AMHOUTP3=1 and AMHRX2=1), or to level seven if they reported receiving inpatient, outpatient, and prescription medication treatment (AMHINP2=1 and AMHOUTP3=1 and AMHRX2=1). Respondents who did not receive mental health treatment in the past year were assigned to level eight (AMHINP2=2 and AMHOUTP3=2 and AMHRX2=2). Respondents whose specific treatment was not distinguishable due to missing values in one or more of the three source variables (AMHINP2, AMHOUTP3, or AMHRX2) were assigned a SAS missing.

NOTE: The following seven variables contain information about the location of outpatient mental health treatment/counseling received in the past year. These variables were revised for the 2009 NSDUH to include those respondents who reported receiving NO outpatient mental health treatment (AMHOUTP3=2) in the No category for the location. This differs from the variables named similarly in the past as they were only defined for those respondents who reported having received outpatient mental health treatment in the past year (AMHOUTP3=1) and those respondents who reported No outpatient mental health treatment were previously defined as SAS missing.

Only respondents who reported having received outpatient mental health treatment/counseling (AMHOUTP3=1) can be defined as having received it at the location. A respondent was allowed to report any of five specific locations or "Some Other Place". If a respondent reported "Some Other Place," they were asked to provide a description of the other location in a follow-up question. The first five variables below were created by examination of the variables containing information on the five specific locations, while the last two variables were created by examination of the variables containing information on the other-specify locations which were grouped into two main categories.

NOTE: The following variables, MHLSchl3 and MHLOTH3, were created by examination of the other-specify write-in responses for locations where a respondent received outpatient mental health treatment/counseling. See additional information included above the location of outpatient mental health treatment recode variable, MHLMNT3.

The following variable, MHLSchl3, was assigned a positive response if a respondent indicated receiving outpatient mental health treatment/counseling in the past year (AMHOUTP3=1) at some location other than the five locations defined above (AUOPOTOP=1) and the location was classified as "School or University Setting/Clinic/Center" (AUOPYRS2=9). A negative response was assigned if the respondent indicated receiving outpatient mental health treatment/counseling in the past year (AMHOUTP3=1) at one of the five locations defined above but not some location other than these five locations (AUOPOTOP=6 AND AUOPYRS2=99), at some location other than the five locations defined above or "School or University Setting/Clinic/Center" and this location was classified as a valid outpatient treatment location (AUOPYRS2=1-6, 12, 13, 14, 15, 16, 18, 19, 20, 21, 23, 24, 25, 27, 28, 29, 31, 32, 33, 40, 41, 44, 46, 47, 52, 53, 57, 58, 60-70), or if they did not receive outpatient mental health treatment in the past year (AMHOUTP3=2). Respondents who indicated receiving outpatient treatment in the past year (AMHOUTP3=1) at some location other than the five locations defined above (AUOPOTOP=1) and the location was classified as an invalid or alternative source of treatment (AUOPYRS2=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73), bad data, don't know, refused, or blank (AUOPYRS2=85, 94, 97, 98), aged 12-17 (AUOPYRS2=89, 99 and AMHOUTP3=.), or classified as missing for receiving outpatient treatment in the past year (AMHOUTP3=.) were set to SAS missing.

| 0 | = No (See comment above) | 41382 | 74.87 |
| 1 | = Yes (See comment above)..... | 38 | 0.07 |

The following variable, MHLOTH3, was assigned a positive response if a respondent indicated receiving outpatient mental health treatment/counseling in the past year (AMHOUTP3=1) at some location other than the six locations defined above and was classified as a valid location for outpatient mental health treatment/counseling and not considered an alternative source of treatment (AUOPOTOP=1 and AUOPYRS2=12, 13, 14, 15, 16, 18, 19, 20, 21, 23, 24, 25, 27, 28, 29, 31, 32, 33, 40, 41, 44, 46, 47, 52, 53, 57, 58, 60-69). A negative response was assigned if the respondent indicated receiving outpatient mental health treatment/counseling in the past year (AMHOUTP3=1) at one of the first five specified locations but not some location other than these locations (AUOPOTOP=6 and AUOPYRS2=99), indicated some other location to be one of the six specified locations defined above (AUOPYRS2=1-6, 9, 43), provided a name of a facility (AUOPYRS2=70) as the 'other' location, or if reported not receiving outpatient mental health treatment in the past year (AMHOUTP3=2). Respondents who indicated receiving outpatient treatment in the past year (AMHOUTP3=1) at some location other than the five locations defined above (AUOPOTOP=1) and the location was classified as an invalid or alternative source of treatment (AUOPYRS2=7, 8, 10, 11, 17, 22, 26, 30, 34, 35, 36, 37, 38, 39, 42, 45, 48, 49, 50, 51, 54, 55, 56, 59, 71, 72, 73), bad data, don't know, refused, or blank (AUOPYRS2=85, 94, 97, 98), aged 12-17 (AUOPYRS2=89, 99 and AMHOUTP3=.), or classified as missing for receiving outpatient treatment in the past year (AMHOUTP3=.) were set to SAS missing.

RECODED ADULT MENTAL HEALTH TREATMENT

NOTE: The following 15 variables contain information about the reasons for not receiving mental health treatment/counseling that was needed in the past year. A respondent must have reported not receiving mental health treatment that was needed in the past year (AMHTXND2=1) in order to be asked the questions on the reason for not receiving treatment. A respondent was allowed to report any of eight specific reasons or "Some Other Reason." If a respondent reported "Some Other Reason," they were allowed to report any of six additional specific reasons or report "Some Other Reason" again. If a respondent reported "Some Other Reason" again, they were then asked to provide the most important other reason in a follow-up question. The first 14 variables below were created by examination of the variables containing information on the fourteen specific reasons; while the last variable was created by examination of the most important other-specify reasons.

The following variable, MHRSOTH2, was assigned a positive response if a respondent reported not receiving mental health treatment that was needed in the past year (AMHTXND2=1) and the reason for not receiving that treatment was other than the fourteen reasons listed above (AUUNSOR=1 and AUUNRIM2=15-69). A negative response was assigned if a respondent reported not receiving mental health treatment that was needed in the past year (AMHTXND2=1) and reported one of the reasons listed in the fourteen variables above, respondent did/had aptt for mental health treatment/counseling or did not report an other-specify reason for not receiving this treatment (AUUNSOR=1, 6 and AUUNRIM2=1-14, 70, 85, 94, 97, 98, 99).

RECODED MENTAL HEALTH

RECODED MENTAL HEALTH

NOTE: The variables in this section are recoded variables that were created from one or more variables from the following two sections: Mental Health and Recoded Substance Dependence and Abuse.

Recoded variables were defined to measure psychological distress, Serious Mental Illness (SMI) and other levels of mental illness, as well as suicide ideation. A logistic regression model revised in 2012 is used to determine the predicted probability of SMI. The predicted mental illness variables (e.g., SMIYR_U, AMIYR_U) that were derived from the 2012 model were examined to determine how they were associated with the mental health predictor variables in the 2012 model. It was found that the 2012 model significantly overestimated the proportion of adults aged 18 or older with SMI (and those with AMI) who had suicidal thoughts in the past year and also the proportion of adults who had MDE in the past year. Therefore, it is recommended that the mental illness variables derived from the 2012 model should not be used when analyzing past year suicidal thoughts, past year MDE, or other associated variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, or lifetime MDE). Similarly, it is recommended that model-based mental illness variables should not be used in conjunction with the K6 variables (including serious psychological distress) or WHODAS variables in any analyses. Specific details about the creation and use of the distress and mental illness variables can be found in the Recoded Mental Health Module Variable Documentation Appendix.

NOTE: The following five variables contain information about psychological distress. The 2008 NSDUH was the first survey year where variables on past month psychological distress (K6SCMON and SPDMON) were available and these variables were used beginning with the 2008 Detailed Tables. A second set of variables describes past year psychological distress (K6SCYR, K6SCMAX, and SPDYR). The past year distress variables, K6SCMAX and SPDYR, were created based on data from the past month K6 items and the worst month in the past year K6 items. Prior to the 2008 NSDUH, past year distress was based only on the worst month in the past year K6 items (SPD_UADJ). Due to the addition of the past month K6 items, it was determined that past year SPD in 2008 and later years is not comparable with years prior to 2008. In order to be able to make comparisons of SPD estimates across years, statistically adjusted variables were created for 2005-2007. The 2005-2007 adjusted past year SPD recodes, K6SMXADJ and SPDYRADJ, can be renamed to the 2008 SPD variable names for use in analyses that use data from the years 2005-2012.

The following variable, K6SCMON, is a score with values ranging from 0 to 24 indicating the level of psychological distress over the past 30 days (past month). This variable is based on data collected from a series of six questions known as the K6, asking adult respondents how frequently they experienced symptoms of psychological distress during the past 30 days. These questions include the following symptoms of distress: feeling nervous (DSTNRV30), feeling hopeless (DSTHOP30), feeling restless or fidgety (DSTRST30), feeling so sad or depressed that nothing could cheer you up (DSTCHR30), feeling that everything was an effort (DSTEFF30), and feeling down on yourself, no good, or worthless (DSTNGD30). For each of the six items listed above, responses of "all of the time" were coded 4, "most of the time" were coded 3, "some of the time" were coded 2, "a little of the time" were coded 1, and "none of the time" and all other responses were coded 0. These assigned values were summed across the six items to calculate a total score for K6SCMON. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

| | | Freq | Pct |
|---------|---|-------------|------------|
| K6SCMON | Len: 2 K6 TOTAL SCORE IN PAST MONTH RANGE = 0 - 24..... | 41671 | 75.39 |
| | . = Aged 12-17 (AGE2<7) | 13600 | 24.61 |

| | | Freq | Pct |
|--------|---|-------------|------------|
| SPDMON | Len: 1 PAST MONTH SERIOUS PSYCH DISTRESS INDICATOR . = Aged 12-17 (K6SCMON=.) | 13600 | 24.61 |
| | 0 = No (K6SCMON<13) | 39052 | 70.66 |
| | 1 = Yes (K6SCMON>=13) | 2619 | 4.74 |

RECODED MENTAL HEALTH

NOTE: The two variables directly above are defined based on questions asking about a respondent's level of psychological distress over the past 30 days. Respondents were then asked if there was a month in the past 12 months when they felt more depressed, anxious, or emotionally stressed than they felt in the past 30 days. This level of psychological distress is referenced as the "worst month in past year" in the following documentation.

The following variable, K6SCYR, is a score with values ranging from 0 to 24 indicating the level of psychological distress during the worst month of the past year, that was not the past 30 days. This variable is only defined for respondents who reported that there was a month in the past 12 months when he/she was more depressed, anxious, or emotionally stressed than during the past 30 days (DSTWORST=1). This score variable is based on a series of six questions asking respondents how frequently they experienced symptoms of psychological distress during their worst month in the past year (only if the worst month was not the past 30 days). These questions are from the K6 and include the following symptoms of distress: feeling nervous (DSTNRV12), feeling hopeless (DSTHOP12), feeling restless or fidgety (DSTRST12), feeling so sad or depressed that nothing could cheer you up (DSTCHR12), feeling that everything was an effort (DSTEFF12), and feeling down on yourself, no good, or worthless (DSTNGD12). For each of the six items listed above, responses of "all of the time" were coded 4, "most of the time" were coded 3, "some of the time" were coded 2, "a little of the time" were coded 1, and "none of the time" and all other responses were coded 0. These assigned values were summed across the six items to calculate a total score for K6SCYR. For respondents who indicated that they did not have a month in the past year worse than the past 30 days, K6SCYR was set to missing. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

| | | | | |
|---------------|--------|---|-------------|------------|
| K6SCYR | Len: 2 | K6 TOTAL SCORE IN WORST MONTH OF PAST YEAR | Freq | Pct |
| | | RANGE = 0 - 24..... | 13632 | 24.66 |
| | | . = Aged 12-17 (AGE2<7) or DSTWORST=2 | 41639 | 75.34 |

The following variable, K6SCMAX, is defined to be the higher K6 score between the past month K6 total score (K6SCMON) variable, and the K6 total score in the worst month of the past year if the worst month was not the past 30 days (K6SCYR) variable.

| | | | | |
|----------------|--------|-----------------------------------|-------------|------------|
| K6SCMAX | Len: 2 | WORST K6 TOTAL SCORE IN PAST YEAR | Freq | Pct |
| | | RANGE = 0 - 24..... | 41671 | 75.39 |
| | | . = Aged 12-17 (AGE2<7) | 13600 | 24.61 |

| | | | | |
|--------------|--------|--|-------------|------------|
| SPDYR | Len: 1 | PAST YEAR SERIOUS PSYCHOLOGICAL DISTRESS INDICATOR | Freq | Pct |
| | | . = Aged 12-17 (K6SCMAX=.) | 13600 | 24.61 |
| | | 0 = No (K6SCMAX<13)..... | 35975 | 65.09 |
| | | 1 = Yes (K6SCMAX>=13) | 5696 | 10.31 |

NOTE: The following four variables present suicide information based on responses to the suicidal ideation screen.

| | | | | |
|-----------------|--------|---|-------------|------------|
| MHSUITHK | Len: 1 | SERIOUSLY THOUGHT ABOUT KILLING SELF IN PAST YEAR | Freq | Pct |
| | | . = Aged 12-17/Unknown (Otherwise) | 13822 | 25.01 |
| | | 0 = No (SUICTHNK=2) | 39360 | 71.21 |
| | | 1 = Yes (SUICTHNK=1) | 2089 | 3.78 |

The following suicide variable, MHSUTK_U, is used in the 2012 mental illness prediction model. It is defined differently than MHSUITHK which is used in the mental health detailed tables. See the mental illness variables further down in this section and the Recoded Mental Health Module Variable Documentation Appendix for more details.

| | | | | |
|-----------------|--------|--|-------------|------------|

| | | 1 = Yes (SUICPLAN=1) | 621 | 1.12 |

| | | | | |
|-----------------|--------|--|-------------|------------|
| MHSUITRY | Len: 1 | ATTEMPTED TO KILL SELF IN PAST YEAR | Freq | Pct |
| | | . = Aged 12-17/Unknown (Otherwise) | 13825 | 25.01 |
| | | 0 = No (SUICTRY=2 or MHSUITHK=0) | 41144 | 74.44 |
| | | 1 = Yes (SUICTRY=1) | 302 | 0.55 |

RECODED MENTAL HEALTH

NOTE: The following 10 variables pertain to the creation of the variables on mental illness. These variables include total scores from the psychological distress and impairment scales, the predicted probability of serious mental illness (SMI), and indicators of various levels of mental illness. Until 2012, a model developed for the 2008 NSDUH was used to determine mental illness status. A revised and improved model predicting mental illness was used starting with the 2012 NSDUH. All mental illness estimates presented in detailed or mental health detailed tables from the 2008 NSDUH and onward have been updated; thus, these estimates are based on the revised model. Additional details about the creation and use of these variables are provided in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, WSPDSC2, is an alternative version of the original worst K6 total score in the past year (K6SCMAX) with values ranging from 0 to 17 rather than 0 to 24. The original total score variable is documented previously in this section with the psychological distress variables. This alternative total score was calculated by assigning a value of 0 when K6SCMAX had a value from 0 to 7 and assigning a value of 1 to 17 when K6SCMAX had a corresponding value from 8 to 24. This alternative version was used in the regression model to determine SMI because SMI prevalence was typically extremely low for respondents with worst K6 total scores less than 8. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

| WSPDSC2 | Len: 2 ALTERNATIVE WORST K6 TOTAL SCORE | | Freq | Pct |
|---------|---|--|-------|-------|
| | RANGE = 0 - 17..... | | 41671 | 75.39 |
| | . = Aged 12-17 (AGE2<7) | | 13600 | 24.61 |

NOTE: The following two variables, WHODASC2 and WHODASC3, are score variables that indicate the level of impairment for respondents. These variables are based on data collected from a series of thirteen questions asking respondents how much difficulty they experienced in doing eight daily activities in the one month in the past year when they were at their worst emotionally. These questions, drawn from the World Health Organization Disability Assessment Schedule (WHODAS), comprise an abbreviated scale which is used to capture information on impairment (see the Recoded Mental Health Module Variable Documentation Appendix for more information). Respondents who had indicated during the administration of any of the K6 items that they had experienced at least one of the K6 symptoms (defined in the note above variables K6SCMON and K6SCYR) at least "a little of the time" (i.e., K6SCMON greater than 0 or K6SCYR greater than 0) were asked about remembering to do things they needed to do (IMPREMEM), concentrating on doing something important when other things were going on around them (IMPCONCN), going out of the house and getting around on their own (IMPGOUT, IMPGOUTM), dealing with people they did not know well (IMPPEOP, IMPPEOPM), participating in social activities (IMPSOC, IMPSOCM), taking care of household responsibilities (IMPHHLID, IMPHHLDM), taking care of daily responsibilities at work or school (IMPRES, IMPRESPM), and getting daily work done as quickly as needed (IMPWORK, IMPRESPM). Respondents who reported that they did not engage in an activity were asked a follow-up question to determine if they did not do so because of emotions, nerves, or mental health.

For the original WHODAS total score, WHODASC2, a value of 3 was assigned for each of the daily activities that a respondent indicated having "severe" difficulty performing, or if the respondent indicated not performing the activity due to problems with emotions, nerves, or mental health. A value of 2 was assigned for each of the daily activities that a respondent indicated having "moderate" difficulty performing, and a value of 1 was assigned for "mild" difficulty. For activities that had a follow-up question, a response of "yes" were assigned a value of a 3 as having "severe difficulty." A value of 0 was assigned for all other responses and nonresponses for each activity. These assigned values were summed to calculate a total score for WHODASC2 which ranges from 0 to 24.

For the alternative WHODAS total score, WHODASC3, a value of 1 was assigned for each of the daily activities that a respondent indicated having "moderate" or "severe" difficulty performing, or if the respondent indicated not performing the activity due to problems with emotions, nerves, or mental health. For activities that had a follow-up question, a response of "yes" were assigned a value of a 1 as having "moderate or severe difficulty." A value of 0 was assigned for all other responses and nonresponses for each activity. These assigned values were summed to calculate a total score for WHODASC3 which ranges from 0 to 8. The alternative version of the WHODAS total score (WHODASC3) was used in the regression model to determine SMI, since it was thought that the sum of a dichotomous measure might fit better than the sum of a linear continuous measure.

Specific details about these variables are provided in the Recoded Mental Health Module Variable Documentation Appendix.

| WHODASC2 | Len: 2 WHODAS TOTAL SCORE | | Freq | Pct |
|----------|-------------------------------|--|-------|-------|
| | RANGE = 0 - 24..... | | 41671 | 75.39 |
| | . = Aged 12-17 (AGE2<7) | | 13600 | 24.61 |

| WHODASC3 | Len: 1 ALTERNATIVE WHODAS TOTAL SCORE | | Freq | Pct |
|----------|---------------------------------------|--|-------|-------|
| | RANGE = 0 - 8..... | | 41671 | 75.39 |
| | . = Aged 12-17 (AGE2<7) | | 13600 | 24.61 |

RECODED MENTAL HEALTH

NOTE: The following 11 mental illness variables are based on the 2012 mental illness prediction model. These variables are not comparable with similarly named variables (based on the 2008 mental illness prediction model) in previous NSDUHs; thus, these variables were renamed by appending "_U" to the previous variable names. Starting with the 2014 NSDUH, new mental illness variable names end only with a "U" and there are no existing similarly named 2008 model based variables. Recommendations concerning the analysis of the mental illness variables derived from the predicted probability of SMI (SMIPP_U) are noted in the documentation above SMIYR_U. Variables based on the 2008 mental illness prediction model are not being provided for the 2012 and future NSDUHs. All the 2008 model-based mental illness variables typically found in this section have been removed from the 2008-2011 NSDUH data files and replaced with the revised 2012 model based mental illness variables. The only exception is SMIPP (the SMI predicted probability based on the 2008 model) which remains available on the 2008-2011 NSDUH data files. Specific details about these variables and the prediction models are provided in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, SMIPP_U, is a predicted probability that a respondent has Serious Mental Illness (SMI) estimated using the 2012 revised logistic regression model. SMIPP_U was used to determine these levels of mental illness: Serious (SMI), Serious or Moderate (SMMI), and Any (AMI). The categories of Moderate (MMI) and Mild (LMI) were determined by subtraction.

| SMIPP_U | Len: 12 PREDICTED SERIOUS MENTAL ILLNESS PROB REVISED RANGE = 0.0025409721 - 0.9291205406..... . = Aged 12-17 (AGE2<7) | Freq | Pct |
|---------|--|-------------|------------|
| | | 41671 | 75.39 |
| | | 13600 | 24.61 |

NOTE: The following six variables (SMIYR_U, AMIYR_U, SMMIYR_U, MMIYR_U, LMIYR_U, and LMMIYRU) are not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, K6, or the WHODAS, nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, SPD, or components used in the K6 or WHODAS scales). Specific details about the creation and use of these variables can be found in the Recoded Mental Health Module Variable Documentation Appendix.

The following variable, SMIYR_U, is a Serious Mental Illness (SMI) indicator for respondents based on the 2012 revised predicted probability of SMI (SMIPP_U). If SMIPP_U is greater than or equal to a specified cutoff point (0.260573529) then SMIYR_U=1, and if SMIPP_U is less than the cutoff point then SMIYR_U=0. This indicator is not comparable with SMI variables prior to 2008, in which SMI was only based on psychological distress. Also, this indicator based on the 2012 model is not comparable with the indicator based on the 2008 model. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

| SMIYR_U | Len: 1 SMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB . = Aged 12-17 (AGE2<7) | Freq | Pct |
|---------|---|-------------|------------|
| | | 13600 | 24.61 |
| | | 39675 | 71.78 |
| | | 1996 | 3.61 |

The following variable, AMIYR_U, is an indicator for Any Mental Illness (AMI) based on the 2012 revised predicted probability of SMI (SMIPP_U). If SMIPP_U is greater than or equal to a specified cutoff point (0.0192519810) then AMIYR_U=1, and if SMIPP_U is less than the cutoff point then AMIYR_U=0. This indicator based on the 2012 model is not comparable with the indicator based on the 2008 model. AMI is defined as having Serious, Moderate, or Mild Mental Illness. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

| AMIYR_U | Len: 1 AMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB . = Aged 12-17 (AGE2<7) | Freq | Pct |
|---------|---|-------------|------------|
| | | 13600 | 24.61 |
| | | 33312 | 60.27 |
| | | 8359 | 15.12 |

The following variable, SMMIYR_U, is an indicator for Serious or Moderate Mental Illness (SMMI) based on the 2012 revised predicted probability of SMI (SMIPP_U). If SMIPP_U is greater than or equal to a specified cutoff point (0.077686285365) then SMMIYR_U=1, and if SMIPP_U is less than the cutoff point then SMMIYR_U=0. This indicator based on the 2012 model is not comparable with the indicator based on the 2008 model. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

| SMMIYR_U | Len: 1 SMMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB . = Aged 12-17 (AGE2<7) | Freq | Pct |
|----------|--|-------------|------------|
| | | 13600 | 24.61 |
| | | 37510 | 67.87 |
| | | 4161 | 7.53 |

RECODED MENTAL HEALTH

The following variable, MMIFYR_U, is an indicator for Moderate Mental Illness (MMI). This indicator derived from mental illness variables based on the 2012 model is not comparable with the indicator derived from mental illness variables based on the 2008 model. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

| | | | | |
|-----------------|--------|---|-------------|------------|
| MMIFYR_U | Len: 1 | MOD MI IND (1/0) BASED ON REVISED PRED SMI PROB | Freq | Pct |
| | | . = Aged 12-17 (AGE2<7) | 13600 | 24.61 |
| | | 0 = No Past Year MMI (Otherwise) | 39506 | 71.48 |
| | | 1 = Past Year MMI (SMMIYR_U=1 and SMIYR_U=0)..... | 2165 | 3.92 |

The following variable, LMIYR_U, is an indicator for Mild (Low) Mental Illness (LMI). This indicator derived from mental illness variables based on the 2012 model is not comparable with the indicator derived from mental illness variables based on the 2008 model. Specific details about this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix.

| | | | | |
|----------------|--------|---|-------------|------------|
| LMIYR_U | Len: 1 | MILD MI IND (1/0) BASED ON REVISED PRED SMI PROB | Freq | Pct |
| | | . = Aged 12-17 (AGE2<7) | 13600 | 24.61 |
| | | 0 = No Past Year LMI (Otherwise) | 37473 | 67.80 |
| | | 1 = Past Year LMI (AMIYR_U=1 and SMMIYR_U=0)..... | 4198 | 7.60 |

The following variable, LMMIYRU, is an indicator for Mild (Low) Mental Illness (LMI) or Moderate Mental Illness (MMI). This indicator is derived from mental illness variables based on the 2012 model. Specific details about this variable are provided in the Recoded Mental Health Module Variable Documentation Appendix.

| | | | | |
|----------------|--------|--|-------------|------------|
| LMMIYRU | Len: 1 | LMMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB | Freq | Pct |
| | | . = Aged 12-17 (AGE2 < 7) | 13600 | 24.61 |

| | | 1 = Past Year LMMI (LMIYR_U=1 or MMIFYR_U=1) | 6363 | 11.51 |

The following variable, MI_CAT_U, is a categorical mental illness indicator. This indicator derived from mental illness variables based on the 2012 model is not comparable with the indicator derived from mental illness variables based on the 2008 model. Please note that MI_CAT_U is not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, K6, or the WHODAS, nor is it recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, SPD, or components used in the K6 or WHODAS scales). Specific details about the creation and use of this variable can be found in the Recoded Mental Health Module Variable Documentation Appendix

| | | 2 = Past Year Moderate Mental Illness (MMIFYR_U=1)..... | 2165 | 3.92 |
| | | 3 = Past Year Serious Mental Illness (SMIYR_U=1)..... | 1996 | 3.61 |

NOTE: The following three variables are recodes that combine mental illness measures based on the 2012 revised predicted probability of SMI (SMIPP_U) with drug or alcohol dependence or abuse in the past year. These variables based on the 2012 mental illness prediction model are not comparable with similarly named variables from previous years using SMI based on the 2008 mental illness prediction model. Starting with the 2014 NSDUH, new combination recodes end only with a "U" and there are no existing similarly named 2008 model based variables. Please note that SMIDA2_U, AMIDA2_U, and LMMIADAU are not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, K6, or the WHODAS, nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, SPD, or components used in the K6 or WHODAS scales). Specific details about the creation and use of the mental illness variables used in these recodes can be found in the Recoded Mental Health Module Variable Documentation Appendix. Specific information about the dependence or abuse variables used in these recodes can be found in the Recoded Substance Dependence and Abuse Variable Documentation Appendix.

ADULT DEPRESSION

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

NOTE: All of the respondents aged 18 or older were asked the questions in the Adult Depression module in this current survey year. In the 2004 survey, a subset of the adults was asked these questions.

Have you ever in your life had a period of time lasting several days or longer when most of the day you felt sad, empty or depressed?

| ADDPREV ¹ | Len: 2 SEVERAL DAYS OR LNGR WHEN FELT SAD/EMPTY/DPRSD | Freq | Pct |

People who have problems with their mood often have other problems at the same time. These problems may include things like changes in:

- sleep
- appetite
- energy
- the ability to concentrate and remember
- feelings of low self-worth

Did you ever have any of these problems during a period of time when you [FEELFILL] for two weeks or longer?

| ADDPPROB ¹ | Len: 2 EVER HAVE OTH PRBLMS DURING 2 WKS OR LONGER | Freq | Pct |
|-----------------------|--|-------|-------|
| 1 | = Yes | 7150 | 12.94 |
| 2 | = No..... | 1615 | 2.92 |
| 94 | = DON'T KNOW..... | 13 | 0.02 |
| 97 | = REFUSED | 12 | 0.02 |
| 98 | = BLANK (NO ANSWER)..... | 289 | 0.52 |
| 99 | = LEGITIMATE SKIP | 46192 | 83.57 |

ADULT DEPRESSION

Think again about these other problems we just mentioned. They include things like changes in

- sleep
- appetite
- energy
- the ability to concentrate and remember
- feelings of low self-worth

Please think of a time when you [FEELFILL] for two weeks or longer and you also had the largest number of these other problems at the same time.

Is there one particular time like this that stands out in your mind as the worst one you ever had?

| ADWRPROB ¹ | Len: 2 ONE PARTICULAR TIME THAT IS THE WORST ONE EVER | Freq | Pct |
|-----------------------|---|-------|-------|
| | 1 = Yes | 4899 | 8.86 |
| | 2 = No..... | 2228 | 4.03 |
| | 94 = DON'T KNOW..... | 17 | 0.03 |
| | 97 = REFUSED | 6 | 0.01 |
| | 98 = BLANK (NO ANSWER)..... | 314 | 0.57 |
| | 99 = LEGITIMATE SKIP | 47807 | 86.50 |

How old were you when that worst period of time started?

Then think of the most recent time when you [FEELFILL] for two weeks or longer and you also had the largest number of these other problems at the same time.

How old were you when that time started?

| ADWRAGE ¹ | Len: 3 AGE WHEN WORST PERIOD OF TIME STARTED | Freq | Pct |
|----------------------|--|-------|-------|
| | RANGE = 1 - 86..... | 6951 | 12.58 |
| | 985 = BAD DATA Logically assigned..... | 4 | 0.01 |
| | 994 = DON'T KNOW..... | 176 | 0.32 |
| | 997 = REFUSED | 19 | 0.03 |
| | 998 = BLANK (NO ANSWER)..... | 314 | 0.57 |
| | 999 = LEGITIMATE SKIP | 47807 | 86.50 |

In answering the next questions, think about the period of time when your [FEELNOUN] and other problems were the worst.

In answering the next questions, think about the most recent period of time when you [FEELFILL] and had other problems at the same time.

During that time, did you feel sad, empty, or depressed most of the day nearly every day?

| ADWRDEPR ¹ | Len: 2 WHEN PRBLMS WORST FELT SAD/EMPTY/DPRSD EVERY DAY | Freq | Pct |
|-----------------------|---|-------|-------|
| | 1 = Yes | 5533 | 10.01 |

ADULT DEPRESSION

Here is a list of professionals some people talk to about the problems we have been asking about:

- General practitioner or family doctor
- Other medical doctor like a cardiologist, gynecologist, urologist
- Psychologist
- Psychiatrist or psychotherapist
- Social Worker
- Counselor
- Other mental health professional, like a mental health nurse
- A nurse, occupational therapist, or other health professional
- A religious or spiritual advisor like a minister, priest, or rabbi
- Another healer, like an herbalist, chiropractor, acupuncturist, or massage therapist

At any time in the past 12 months, did you see or talk to a medical doctor or other professional about your [FEELNOUN]?

RECODED ADULT DEPRESSION

RECODED ADULT DEPRESSION

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The following variable, AMDELT, identifies an adult as having a major depressive episode (MDE) in their lifetime and AMDEYR identifies an adult as having MDE in the prior year. Due to questionnaire changes in 2008, these MDE variables are not directly comparable to MDE variables from 2004 to 2008. Adjusted lifetime and past year MDE variables (AJAMDELT and AJAMDEYR) were developed to allow comparisons of adult MDE data across years beginning with 2005 and continuing through 2008 and later years. Adjusted variables were not created for 2004. The youth MDE variables continue to remain comparable between 2004 and 2012. Specific details about the analysis of MDE data can be found in the Recoded Depression Variable Documentation Appendix.

A respondent was classified as having a major depressive episode (MDE) in their lifetime, AMDELT=1, if they reported experiencing at least five out of the nine criteria used to define an adult as having had MDE in their lifetime, where at least one of the criteria is a depressed mood or loss of interest or pleasure in daily activities (ADSMMDA=1).

An adult was classified as NOT having a major depressive episode (MDE) in their lifetime, AMDELT=2, if they met either of these conditions:

1. Reported experiencing fewer than 5 out of the 9 criteria used to define an adult as having had MDE in their lifetime (ADSMMDA=2).
2. If the number of criteria used to define an adult as having had MDE in their lifetime is unknown (ADSMMDA=98) and the respondent reported at least one of the following:
 - i. Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (ADDPREV=2), discouraged about how things were going in life (ADDSCREV=2), and lost interest in most things usually enjoyable (ADLOSEV=2).
 - ii. Experienced the feelings in (i), but they did not last most of the day, nearly every day for two weeks or longer (ADLSI2WK=2) or (ADPR2WK=2).
 - iii. Experienced the feelings in (i) most of the day, nearly every day for two weeks or longer, but the feelings lasted less than an hour when mood was most severe and frequent (ADWRHRS=1).
 - iv. Experienced the feelings in (i) most of the day, nearly every day for two weeks or longer for at least an hour during those times when mood was most severe and frequent, but emotional distress was mild (ADWRDST=1), there was never a time when emotional distress was so severe that you could not be cheered up (ADWRCHR=4), and there was never a time when your emotional distress was so severe that you could not carry out your daily activities (ADWRIMP=4).
 - v. Experienced the feelings in (i) most of the day, nearly every day for two weeks or longer for at least an hour and the severe distress were more than mild or at some point could not be cheered up or could not carry out daily activities, but never had any other problems during those weeks, such as changes in sleep, appetite, energy, the ability to concentrate and remember, or feelings of low self-worth (ADPPROB=2).

The following variable, AOTHMDE, defines an adult as having seen or talked to another professional about MDE during the past year if s/he entered a valid write-in response other than the responses that matched existing categories.

An adult was classified as NOT having seen or talked to another professional about MDE during the past year, AOTHMDE=0, if s/he met either of these conditions:

1. Reported NOT seeing or talking to a medical doctor or other professional during the past year (ADSEEDOC=2).
2. Response not entered for whether other mental health professional was seen or talked to during the past year (ADOTHHLP=6).
3. Write-in response entered matched an existing category.

The following variable, AHLTMDE, indicates whether an adult reported seeing or talking to a health professional about MDE in the past year. Adults were classified as having seen or talked to a health professional, AHLTMDE=1, if they reported seeing or talking to any of the following professionals: general practitioner or family doctor (ADOCMDE=1); other medical doctor (AOADMDE=1); psychologist (APSY1MDE=1); psychiatrist or psychotherapist (APSY2MDE=1); social worker (ASOCMDE=1); counselor (ACOUNMDE=1); other mental health professional (AOMHMDE=1); or nurse, occupational therapist, or other health professional (ANURSMDE=1). Respondents were classified as having not seen or talked to a health professional, AHLTMDE=0, if they reported not seeing or talking to all of the professionals listed above (source variable=0).

YOUTH MENTAL HEALTH TREATMENT

Sometimes students get treatment or counseling through the school system. This counseling is often provided by school social workers, school psychologists or school counselors.

During the past 12 months, that is, since [DATEFILL], did you receive any treatment or counseling from a school social worker, a school psychologist, or a school counselor for emotional or behavioral problems that were not caused by alcohol or drugs?

YOUTH MENTAL HEALTH TREATMENT

Sometimes, the court system provides treatment or counseling in juvenile detention centers, prisons or jails. These services are often provided by psychiatrists, psychologists, social workers or counselors who work for the court system.

While you were in a juvenile detention center, prison or jail during the past 12 months, did you receive treatment or counseling for emotional or behavioral problems that were not caused by alcohol or drugs?

RECODED YOUTH MENTAL HEALTH TREATMENT

RECODED YOUTH MENTAL HEALTH TREATMENT

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: The following recoded variables contain information about whether youths received mental health care in the past year from each of 11 specific services for problems with behaviors or emotions that were not caused by alcohol or drugs.

The following variable, ANYMHIN2, indicates whether a youth reported receiving specialty inpatient/residential mental health services in the past year from any of two specific inpatient/residential sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following two sources of treatment variables: stayed overnight in hospital (YHOSP) and stayed in residential treatment facility (YRESID). Youths who reported a positive response (source variable=1) to either question were included in the yes category. Youths who did not report a positive response, but answered both questions were included in the no category. Youths who did not report a positive response and did not answer both questions, and adults, were included in the unknown/18+ category.

The following variable, ANYMHOUT, indicates whether a youth reported receiving specialty outpatient mental health services in the past year from any of 4 specific outpatient sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following 4 source of treatment variables: spent time in a day treatment facility (YDAYTRT), received treatment at a mental health clinic (YCLIN), from a private therapist (YTHER), and from an in-home therapist (YHOME). Youths who reported a positive response (source variable=1) to one or more of the 4 questions were included in the yes category regardless of how many of the 4 questions they answered. Youths who did not report a positive response, but answered all 4 of the questions were included in the no category. Youths who did not report a positive response and did not answer all the questions, and adults were included in the unknown/18+ category.

| | | 1 = Yes (YDAYTRT, YCLIN, YTHER, or YHOME=1) | 1829 | 3.31 |

The following variable, ANYSMH2, indicates whether a youth reported receiving specialty mental health services in the past year from any of six specific inpatient/residential or outpatient specialty sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following six source of treatment variables: stayed overnight in a hospital (YHOSP), stayed in a residential treatment facility (YRESID), spent time in a day treatment facility (YDAYTRT), received treatment from a mental health clinic (YCLIN), from a private therapist (YTHER), and from an in-home therapist (YHOME). Youths who reported a positive response (source variable=1) to one or more of the six questions were included in the yes category regardless of how many of the six questions they answered. Youths who did not report a positive response, but answered all six of the questions were included in the no category. Youths who did not report a positive response and did not answer all the questions, and adults were included in the unknown/18+ category.

RECODED YOUTH MENTAL HEALTH TREATMENT

The following variable, ANYNSMH, indicates whether a youth reported receiving nonspecialty mental health services in the past year from any of five specific nonspecialty sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created based on the following five source of treatment variables: school social worker, school psychologist, or school counselor (YSHSW), special school or program within a regular school for students with emotional or behavioral problems (YSPEC), pediatrician or other family doctor (YPED), juvenile detention center, prison, or jail (YJAIL), and foster care or therapeutic foster care (YFOST). Youths who reported a positive response (source variable=1) to one or more of the five questions were included in the yes category regardless of how many of the five questions they answered. Youths who did not report a positive response, but answered all five of the questions were included in the no category. Youths who did not report a positive response and did not answer all the questions, and adults were included in the unknown/18+ category.

| | . | = Unknown/Aged 18+ (See comment above) | 42000 | 75.99 |
| | 0 | = No (All above source variables=0) | 11112 | 20.10 |
| | 1 | = Yes (Any above source variable=1) | 2159 | 3.91 |

The following variable, ANYMHED2, indicates whether a youth enrolled in school reported receiving mental health services in the past year from education sources for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created using the following source of treatment variables: talked to school social worker, school psychologists, or school counselors for problems (YSHSW) and attended a special school or participated in a special program at a regular school for problems (YSPEC). Youths who reported a positive response (source variable=1) to one or more of these questions were included in the yes category regardless of how many of the questions they answered. Youths who did not report a positive response, but answered both questions were included in the no category. Youths who did not report a positive response and did not answer both questions, and adults were included in the unknown/18+ category. This variable is not comparable with variables named similarly in past NSDUHs due to questionnaire changes in the Youth Mental Health Utilization module.

| | 1 | = Yes (YSHSW=1 or YSPEC=1) | 1872 | 3.39 |

The following variable, ANYSEDMF, indicates whether a youth reported receiving specialty mental health services along with services from education, general medicine (family doctor/pediatrician), or foster care or therapeutic foster care settings in the past year for problems with behavior or emotions that were not caused by alcohol or drugs. This variable was created using the following four source of treatment variables: received specialty mental health services (ANYSMH2), education setting-based mental health services (ANYMHED2), treatment from a family doctor/pediatrician (YPED), and foster care or therapeutic foster care (YFOST). Included in the unknown/18+ category were youths who did not provide enough information to determine whether mental health care was received at both a specialty mental health service along with services from either an education or general medical setting [ANYSMH2= or {ANYSMH2=1 and (none of ANYMHED2, YPED, or YFOST equal 1 but at least one is missing)}] and adults.

RECODED YOUTH MENTAL HEALTH TREATMENT

The following variable, SPINVST2, indicates how many overnight stays were reported at an inpatient/residential specialty mental health service in the past year. The number of overnight stays is calculated by adding the number of overnight stays at a hospital (YUHOSPN2) and residential treatment center (YURSIDN2). A value of 6 (No Overnight Stays) was assigned whenever a respondent said they had used none of the services (YUHOSPYR=2 and YURSIDYR=2). A value of missing was assigned when the response to whether received treatment or number of overnight stays was unknown for either of the locations (YUHOSPYR or YURSIDYR=85, 94, 97, 98 OR either of YUHOSPN2 or YURSIDN2=985, 994, 997, 998), unless the overnight stays for the service with non-missing information was greater than or equal to 25, in which case a value of 5 (25 or more stays) was assigned. A missing value was also assigned for respondents aged 18 or older.

Prior to the 2013 NSDUH, a different version of the variable for number of visits or overnight stays at an inpatient/residential specialty mental health service in the past year, SPINVST, was created that included the variables YUFCARN2 and YUFCARYR that determined the number of visits in foster care. During the 2013 NSDUH process, it was determined that treatment received through foster care should be included in the nonspecialty treatment category instead; thus the variable SPINVST2 was created.

The following variable, SPOUTVST, indicates how many times a specialty outpatient mental health service was visited in the past year. The number of visits is calculated by adding the number of visits to a day treatment facility (YUDYTXN2), mental health clinic (YUMHCRN2), private therapist (YUTPSTN2), and an in-home therapist (YUIHTPN2). A value of 6 (No Visits) was assigned whenever a respondent said they had used none of the services (YUDYTXYR, YUMHCRYR, YUTPSTYR, YUIHTPYR all equal 2). A value of missing was assigned when the response to whether received treatment or number of visits was unknown for any of the 4 locations (any of YUDYTXYR, YUMHCRYR, YUTPSTYR, YUIHTPYR=85, 94, 97, 98 OR any of YUDYTXN2, YUMHCRN2, YUTPSTN2, YUIHTPN2=985, 994, 997, 998), unless the sum of the visits for services with non-missing information was greater than or equal to 25, in which case a value of 5 (25 or more visits) was assigned. A missing value was also assigned for respondents aged 18 or older.

The following variable, SMHVST2, indicates the number of visits or overnight stays to a specialty mental health service in the past year. The number of visits/overnight stays is calculated by adding the number of overnight stays in a hospital (YUHOSPN2) and residential treatment center (YURSIDN2), and the number of visits to a day treatment facility (YUDYTXN2), mental health clinic (YUMHCRN2), private therapist (YUTPSTN2), and in-home therapist (YUIHTPN2). A value of 6 (No Visits/Overnight Stays) was assigned whenever a respondent said they had used none of the services (YUHOSPYR, YURSIDYR, YUDYTXYR, YUMHCRYR, YUTPSTYR, YUIHTPYR all equal 2). A value of missing was assigned when the response to whether received treatment or number of visits/stays was unknown for any of the 6 locations (any of YUHOSPYR, YURSIDYR, YUDYTXYR, YUMHCRYR, YUTPSTYR, YUIHTPYR=85, 94, 97, 98 OR any of YUHOSPN2, YURSIDN2, YUDYTXN2, YUMHCRN2, YUTPSTN2, YUIHTPN2=985, 994, 997, 998), unless the sum of the visits/overnight stays for services with non-missing information was greater than or equal to 25, in which case a value of 5 (25 or more visits/stays) was assigned. A missing value was also assigned for respondents aged 18 or older.

RECODED YOUTH MENTAL HEALTH TREATMENT

NOTE: The following 13 variables contain the reasons that youths received their most recent mental health services from at least one inpatient/residential specialty mental health source for emotional or behavioral problems not caused by alcohol or drugs. These variables are not comparable to similar named variables found in previous NSDUHs due to the relocation of foster care into the nonspecialty treatment category instead of the specialty treatment category where it previously was included.

The following variable, SIMHSUI2, indicates whether a respondent received their most recent mental health services from at least one inpatient/residential specialty mental health source in the past year because they thought about or tried to kill themselves. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOSUIC) or residential treatment center (YURSSUIC) because of suicidal thoughts. None of the write-in other-specify values were applicable for this variable. Adults, youths that did not report receiving services from either of these inpatient/residential sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

RECODED YOUTH MENTAL HEALTH TREATMENT

The following variable, SIMHOTP2, indicates whether a respondent received their most recent mental health services from at least one inpatient specialty mental health source in the past year because they had problems with people other than family or friends. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOTPP) or residential treatment center (YURSOTPP) because they had problems with people other than family or friends, as well as the corresponding write-in other-specify variables: most important reason for staying overnight in a hospital or residential treatment center was because they had problems with people other than family or friends. A respondent was classified as having indicated that they received inpatient mental health services for this reason if any of the above source variables=1, 3 or if any of the write-in other-specify variables indicated problems with others. Adults, youths that did not report receiving services from either of these inpatient sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

The following variable, SMHFITE2, indicates whether a respondent received their most recent mental health services from at least one specialty mental health source in the past year because they were in physical fights. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOFITE), residential treatment center (YURSFITE), or visited a day treatment program (YUDYFITE), mental health center (YUMHFITE), private therapist (YUTPFITE), or received treatment from an in-home therapist (YUIHFITE) because they were in physical fights. None of the write-in other-specify values were applicable for this variable. Adults, youths that did not report receiving services from any of the 6 specialty sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

RECODED YOUTH MENTAL HEALTH TREATMENT

The following variable, SMHFMLY2, indicates whether a respondent received their most recent mental health services from at least one specialty mental health source in the past year because they had problems at home or in their family. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOFMLY), residential treatment center (YURSFMLY), or visited a day treatment program (YUDYFMLY), mental health center (YUMHFMLY), private therapist (YUTPFMLY), or received treatment from an in-home therapist (YUIHFMLY) because they had problems at home or in their family, as well as the write-in other-specify variables: most important reason for staying overnight in a hospital, residential treatment center, or visited a day treatment program, mental health center, private therapist, or received treatment from an in-home therapist was because they had problems at home or in their family. A respondent was classified as having indicated that they received mental health services for this reason if any of the above source variables=1, 3 or if any of the write-in other-specify variables indicated home or family problems. Adults, youths that did not report receiving services from any of the 6 specialty sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

The following variable, SMHOTPP2, indicates whether a respondent received their most recent mental health services from at least one specialty mental health source in the past year because they had problems with people other than family or friends. This recode was created by examination of the following source variables: stayed overnight in hospital (YUHOOTPP), residential treatment center (YURSOTPP), or visited a day treatment program (YUDYOTPP), mental health center (YUMHOTPP), private therapist (YUTPOTPP), or received treatment from an in-home therapist (YUIHOTPP) because they had problems with other people other than family or friends, as well as the write-in other-specify variables: most important reason for staying overnight in a hospital, residential treatment center, or visits to a day treatment program, mental health center, private therapist, or received treatment from an in-home therapist because they had problems with other people other than family or friends. A respondent was classified as having indicated that they received mental health services for this reason if any of the above source variables=1, 3 or if any of the write-in other-specify variables indicated problems with others. Adults that did not report receiving services from any of the 6 specialty sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

RECODED YOUTH MENTAL HEALTH TREATMENT

The following variable, SMHMEND2, indicates whether a respondent received their most recent mental health services from at least one specialty mental health source in the past year because they had a diagnosed mental disorder. This recode was created based only on responses to other-specify write-in variables: most important reason for staying overnight in a hospital, residential treatment center, or visited a day treatment program, mental health center, private therapist, or received treatment from an in-home therapist was because they had a diagnosed mental disorder. A respondent was classified as having indicated that they received mental health services for this reason if any of the above other-specify variables indicated reasons related to mental disorders. Adults, youths that did not report receiving services from any of the 6 specialty sources in the past year, and youths that reported receiving services in the past year, but did not indicate a valid reason for receiving services at any of these locations were assigned to the unknown category.

NOTE: The following 13 variables, SHSWXXX, indicate whether a respondent last talked with their school social worker, school psychologist, or school counselor in the past year because of respective reasons. Youths were assigned a "Reason not indicated" for the specific reason if they did not indicate that specific reason for their last talk with their school social worker, school psychologist, or school counselor (YUSWXXXX=6) but did indicate one of the other 12 reasons. Adults, youths that did not report or had unknown information about receiving services from a school social worker, school psychologist, or school counselor in the past year, and youths that reported receiving services in the past year, but did not indicate any valid reason for receiving services were assigned to the unknown category. These variables are not comparable with variables named SHCNSXX in previous NSDUHs due to questionnaire changes in the Youth Mental Health Utilization module.

RECODED ADOLESCENT DEPRESSION

RECODED ADOLESCENT DEPRESSION

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

NOTE: Starting with the 2004 NSDUH, respondents were administered separate age-appropriate depression modules designed to measure whether or not respondents had experienced a major depressive episode (MDE) in their lifetime and past year. All adolescent (youth) respondents aged 12 to 17 were asked questions from the Youth Depression module. The 2004 NSDUH only asked a subsample of adults aged 18 or older the questions from the Adult Depression module, but starting in 2005, all adults were administered the questionnaire module.

From 2004 through 2007, a single set of variables was created containing the recoded MDE data for both adult and adolescent respondents combined. In 2008, instead of a single set of variables, two recoded sets of MDE variables were created for adolescents and adults separately. This change was due to the presence of context effects in the adult estimates stemming from changes in the mental health module which precedes the adult depression section within the questionnaire. Based on an analysis of the 2008 data that evaluated the presence of context effects, it was determined that the adult depression estimates in 2008 and later years are not comparable with years prior to 2008, and the variables were therefore renamed to indicate the lack of comparability. The youth depression estimates were not impacted by the 2008 adult questionnaire changes and are considered comparable across years. Therefore, only the youth depression variables that were previously defined for both adults and youth had to be renamed. Multi-year trend analyses can be performed by renaming the recoded adolescent depression variables the same across years. Youth depression variables that did not require renaming are noted specifically in the comments above the variables below. See the 2008 Recoded Mental Health Module Variable Documentation Appendix for more detailed information on the 2008 changes as well as the 2008 Recoded Depression Variable Documentation Appendix for example SAS code showing how to rename the variables for multi-year analyses.

In 2009, changes were made to the youth mental health service utilization (YMHSU) questions that preceded the adolescent depression questions. These changes included the replacement of five questions that asked about receipt of special education services and school counseling, and time spent in jail or foster care with questions that asked about receipt of mental health services in the education and justice system sectors. Due to this change, a context effect analysis was done using data from the first 6 months of the 2009 NSDUH and sought to determine whether changes in the YMHSU module affected responses to the first three adolescent depression questions and the lifetime and past year MDE estimates. The results of the analysis showed these changes in 2009 did not appear to affect the estimates of adolescent MDE; therefore, no further variable changes were needed.

Additional details on these adolescent depression recoded variables are provided in the Recoded Depression Variable Documentation Appendix.

The following variable, YMDELT, classifies an adolescent as having a major depressive episode (MDE) in their lifetime, YMDELT=1, if they reported experiencing at least 5 out of the 9 criteria used to define an adolescent as having had MDE in their lifetime, where at least one of the criteria is a depressed mood or loss of interest or pleasure in daily activities (YODSMMDE=1).

An adolescent was classified as NOT having a major depressive episode (MDE) in their lifetime, YMDELT=2, if they met either of these conditions:

1. Reported experiencing fewer than 5 out of the 9 criteria used to define an adolescent as having had MDE in their lifetime (YODSMMDE=2).
2. If the number of criteria used to define an adolescent as having had MDE in their lifetime is unknown (YODSMMDE=98) and the respondent reported at least one of the following:
 - i. Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (YODPREV=2), discouraged or hopeless about how things were going in life (YODSCEV=2), and lost interest and became bored with most things usually enjoyable (YOLOSEV=2).
 - ii. Experienced the feelings in (i), but they did not last most of the day, almost every day for two weeks or longer [YOLSI2WK=2 or YODPR2WK=2].
 - iii. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer, but the feelings lasted less than an hour when mood was most severe and frequent (YOWRhrs=1).
 - iv. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer for at least an hour during those times when mood was most severe and frequent, but the bad feelings were mild (YOWRDST=1), there was never a time when you felt so bad that nothing could cheer you up (YOWRCHR=4), and there was never a time when you felt so bad that you could not carry out your daily activities (YOWRIMP=4).
 - v. Experienced the feelings in (i) most of the day, almost every day for two weeks or longer for at least an hour with bad feelings that were more than mild or at some point could not be cheered up or could not carry out daily activities, but never had any other problems during those weeks, such as changes in sleep, eating, energy, the ability to keep mind on things, or feeling badly about self (YODPPROB=2).

The following variable, YOTHMDE, defines an adolescent as having seen or talked to another professional about MDE during the past year, YOTHMDE=1, if s/he entered a valid write-in response other than the responses that matched the existing categories.

An adolescent was classified as NOT having seen or talked to another professional about MDE during the past year, YOTHMDE=0, if s/he met either of these conditions:

1. Reported NOT seeing or talking to a medical doctor or other professional during the past year (YOSEEDOC=2).
2. Response not entered for whether other mental health professional was seen or talked to during the past year (YOOTHHLP=6).
3. Write-in response entered matched an existing category.

| | | | | |

CONSUMPTION OF ALCOHOL

CONSUMPTION OF ALCOHOL

The values in the section may be inconsistent with values from the core section(s). Items in this section were edited when respondents legitimately skipped out of these items based on prior answers in the core section(s). Otherwise, non-core items generally were not edited to make them consistent with core items, and core items were not edited to make them consistent with non-core items. This note applies to variables in this section marked by a ¹.

The next few questions return to the topic of alcohol. Remember that by a drink, we mean a can or bottle of beer, a glass of wine or a wine cooler, a shot of liquor, or a mixed drink with liquor in it. We are not asking about times when you only had a sip or two from a drink.

Earlier, the computer recorded that you drank at least one alcoholic beverage within the past 30 days, that is, since [DATEFILL].

Please think about the last time you drank any alcoholic beverage. How many drinks did you have that time?

CONSUMPTION OF ALCOHOL

NOTE: The distributions for CA4FDDYS, EI4FDDYS, CA4FDAGE, EI4FDAGE, CA4FDYFU, EI4FDYFU, CA4FDMFU, and EI4FDMFU for the 2006 survey are not comparable to the corresponding distributions in this survey year. A sizable number of female respondents in 2006 were incorrectly skipped out of the items corresponding to the variables CA4FDDYS and CA4FDAGE. In turn, the error for CA4FDAGE affected female respondents' eligibility to be asked the items corresponding to CA4FDYFU and CA4FDMFU. This error was corrected for the 2007 survey.

During the past 30 days, that is, since [DATEFILL], on how many days did you have 4 or more drinks on the same occasion?

| CA4FDDYS¹ | Len: 2 # DAYS HAD 4+ DRINKS SAME OCCASION PAST 30 DAYS | Freq | Pct |

RECODED CONSUMPTION OF ALCOHOL

RECODED CONSUMPTION OF ALCOHOL

NOTE: The variables in this section are recoded variables that were created from one or more of the edited variables from the preceding section.

NOTE: Certain source variables that were used to create recoded variables have valid values that might not have been reported or assigned for the current survey year. However, these values have been included in the general specifications in the codebook on how the recoded variables were created. See additional details about this issue in the Organization of the Data File section of this codebook introduction.

The following variable defines the social context of a respondent's last alcohol use, including whether they drank alone or if they were with one or more persons.

| UADPEOP Len: 1 SOCIAL CONTEXT OF MOST RECENT ALCOHOL USE | | Freq | Pct |
|--|--|-------------|------------|
| . | = Unknown (Otherwise) | 275 | 0.50 |
| 1 | = Drank Alone (CADRPEOP=1)..... | 239 | 0.43 |
| 2 | = Drank with One Other Person (CADRPEOP=2)..... | 622 | 1.13 |
| 3 | = Drank with Two or More Other People (CADRPEOP=3) | 2800 | 5.07 |
| 4 | = No Past Mon Alc/Aged 21+ (CADRPEOP=89,91,93,99) | 51335 | 92.88 |

NOTE: The following eight variables define the locations where respondents had their most recent alcohol use.

| UADCAR Len: 1 MOST RECENT ALCOHOL USE IN A CAR | | Freq | Pct |
|--|--|-------------|------------|
| . | = Unknown/No PM Use/Aged 21+ (Otherwise) | 51653 | 93.45 |
| 1 | = Yes (CADRCAR=1,3)..... | 135 | 0.24 |
| 2 | = No (CADRCAR=6) | 3483 | 6.30 |

| UADHOME Len: 1 MOST RECENT ALCOHOL USE AT HOME | | Freq | Pct |
|--|--|-------------|------------|
| . | = Unknown/No PM Use/Aged 21+ (Otherwise) | 51653 | 93.45 |
| 1 | = Yes (CADRHOM=1,3) | 1188 | 2.15 |
| 2 | = No (CADRHOM=6) | 2430 | 4.40 |

| UADOTHM Len: 1 MOST RECENT ALCOHOL USE AT SOMEONE ELSE'S HOME | | Freq | Pct |

| . | = Unknown/No PM Use/Aged 21+ (Otherwise) | 51653 | 93.45 |
| 1 | = Yes (CADRBAR=1,3)..... | 233 | 0.42 |
| 2 | = No (CADRBAR=6) | 3385 | 6.12 |

| UADEVNT Len: 1 MOST RECENT ALCOHOL USE AT CONCERT OR SPORTS GAME | | Freq | Pct |
|--|--|-------------|------------|
| . | = Unknown/No PM Use/Aged 21+ (Otherwise) | 51653 | 93.45 |
| 1 | = Yes (CADREVNT=1,3)..... | 69 | 0.12 |
| 2 | = No (CADREVNT=6) | 3549 | 6.42 |

| UADSCHL Len: 1 MOST RECENT ALCOHOL USE AT SCHOOL | | Freq | Pct |
|--|--|-------------|------------|
| . | = Unknown/No PM Use/Aged 21+ (Otherwise) | 51653 | 93.45 |
| 1 | = Yes (CADRSCHL=1,3)..... | 80 | 0.14 |
| 2 | = No (CADRSCHL=6) | 3538 | 6.40 |

RECODED CONSUMPTION OF ALCOHOL

The following variable, UADROTH, was assigned a negative response if a respondent indicated not receiving their most recent alcohol from some other place (CADROTH=6) or indicated receiving their most recent alcohol from one of the other specific locations asked about (CADROTH=1 & CADROTS2=1-7). A missing was assigned if a respondent indicated that they received their most recent alcohol from some other place (CADROTH=1) and their response to the other-specify follow-up question was invalid or unknown (CADROTS2=70, 85, 94, 97, 98) or if they were not alcohol users, or did not indicate any location for their most recent alcohol use (CADROTH=91, 93, 94, 97, 98, 99).

| | | | |
|----------------|--|-------------|------------|
| UADROTH | Len: 1 MOST RECENT ALCOHOL USE AT SOME OTHER PLACE | Freq | Pct |
| | . = Unknown/No PM Use/Aged 21+ (See comment above) | 51709 | 93.56 |
| | 1 = Yes (CADROTH=1 and CADROTS2=8-41) | 245 | 0.44 |
| | 2 = No (See comment above) | 3317 | 6.00 |

| | | | |
|----------------|---|-------------|------------|
| UADOTSP | Len: 1 OTHER LOCATIONS OF MOST RECENT ALCOHOL USE | Freq | Pct |
| | . = Unknown (CADROTS2=70,85,94,97,98) | 374 | 0.68 |
| | 1 = Party, Wedding, or Celebration (CADROTS2=35) | 87 | 0.16 |
| | 2 = Outside; Location Not Specified (CADROTS2=24) | 41 | 0.07 |
| | 3 = Hotel, Motel, or Resort (CADROTS2=15) | 27 | 0.05 |
| | 4 = Camping, Hunting, or Fishing (CADROTS2=22) | 17 | 0.03 |

| 2 | = Aged 21 or Older (CABUNDAG=2) | 45 | 0.08 |
| 3 | = No PM Alc/21+/Plce/No Pay, Buy (See comment above)..... | 54933 | 99.39 |

A respondent was assigned a value of UADCAG=5 if they did not use alcohol in the past month, were aged 21 or older, were past month alcohol users who were under 21 but did not pay for their most recent alcohol, or were past month alcohol users who were under 21 but bought it themselves (CAGVWHO=89, 91, 93, 99).

| UADCAG | Len: 1 WHO PURCHASED UNDERAGE DRINKER MOST RECENT ALCOHOL | Freq | Pct |
|---------------|--|-------------|------------|
| . | = Unknown (Otherwise) | 299 | 0.54 |
| 1 | = Parent or Guardian (CAGVWHO=1) | 31 | 0.06 |
| 2 | = Another Family Member Aged 21 or Older (CAGVWHO=2) | 76 | 0.14 |
| 3 | = Someone Not Related Aged 21 or Older (CAGVWHO=3) | 480 | 0.87 |
| 4 | = Someone Under the Age of 21 (CAGVWHO=4)..... | 81 | 0.15 |
| 5 | = No PM Alc/21+/No Pay/Buy Self (See comment above)..... | 54304 | 98.25 |

The following variable, UADFWHO, was assigned missing if a respondent indicated that some other person gave them the last alcohol they drank (CAFREWHO=7) and their response to the other-specify follow-up question was unknown (CAFRESP2=70, 85, 94, 97, 98) or if they did not indicate who gave them the last alcohol they drank (CAFREWHO=85, 94, 97, 98). A respondent was assigned a value of UADFWHO=8 if they did not use alcohol in the past month, were aged 21 or older, or were past month alcohol users who were under 21 but paid for it themselves (CAFREWHO=89, 91, 93, 99).

| UADFWHO | Len: 1 WHO GAVE UNDERAGE DRINKER MOST RECENT ALCOHOL | Freq | Pct |
|----------------|---|-------------|------------|
| . | = Unknown (See comment above) | 445 | 0.81 |

| 2 | = Another Family Member, 21 or Older (CAFREWHO=2,12)..... | 402 | 0.73 |
| 3 | = Someone Not Related, 21 or Older (CAFREWHO=3,13) | 858 | 1.55 |
| 4 | = Someone Under the Age of 21 (CAFREWHO=4,14) | 480 | 0.87 |
| 5 | = Took From My Home (CAFREWHO=5,15)..... | 175 | 0.32 |
| 6 | = Took From Someone Else's Home (CAFREWHO=6,16)..... | 103 | 0.19 |
| 7 | = Some Other Way (CAFREWHO=7 & CAFRESP2=7-43)..... | 216 | 0.39 |
| 8 | = No PM Alc/Aged 21+/Pay (See comment above)..... | 52301 | 94.63 |

The following variable, UADFRD, was assigned a negative response if a respondent indicated receiving their most recent alcohol not from a friend (CAFREWHO=1-6, 11-16) or from some other person besides a friend (CAFREWHO=7 & CAFRESP2=7, 8-21, 23-42). A missing was assigned if a respondent indicated that some other person gave them the last alcohol they drank (CAFREWHO=7) and their response to the other-specify follow-up question was unknown (CAFRESP2=70, 85, 94, 97, 98) or if they did not indicate who gave them the last alcohol they drank (CAFREWHO=85, 94, 97, 98). A respondent was assigned a value of UADFRD=3 if they did not use alcohol in the past month, were aged 21 or older, or were past month alcohol users who were under 21 but paid for it themselves (CAFREWHO=89, 91, 93, 99).

| UADFRD | Len: 1 MOST RECENT ALCOHOL FROM FRIEND, UNSPEC AGE/METHOD | Freq | Pct |

| The following variable, DRKMTH, was created to capture the respondent's use of methamphetamine with his or her most recent use of alcohol. A positive response was assigned if the respondent reported methamphetamine use with his or her most recent alcohol use (CADRKMTH=1, 5) and if he or she reported methamphetamine use in the core Stimulants module or he or she reported its use in the noncore Special Drugs module and they did not report methamphetamine use in the core Stimulants module because he or she did not consider it to be a prescription drug. A negative response was assigned if the respondent reported no methamphetamine use with his or her most recent alcohol use or reported never having used alcohol or methamphetamine or not having used in the past 30 days (CADRKMTH=6,81,83,89,91,93,99). A negative response could also be assigned if a respondent reported methamphetamine use with his or her most recent alcohol use (CADRKMTH=1,5) but he or she did not report ever having used methamphetamine in the core Stimulants module or in the noncore Specialty Drug module because they did not consider it to be a prescription drug. | | | | | |

RECODED CONSUMPTION OF ALCOHOL

The following variable, DRKSUM, was created to capture the use of any illicit drug with the respondent's most recent use of alcohol. It was created by examination of the following variables: DRKMRJ, DRKCOC, DRKHER, DRKHAL, DRKINH, DRKANL, DRKTRN, DRKSTM, DRKMTH, and DRKSED. A positive response was assigned if a respondent answered 'Yes' to any of the individual drug variables. A negative response was assigned if a respondent answered 'No' to all drug variables or the respondent was not a past month user of any illicit drugs (SUMMON=0). If neither of these was true, then DRKSUM was set to missing.

| DRKSUM | Len: 1 USED ILLICIT DRUGS WITH LAST ALCOHOL USE | Freq | Pct |
|---------------|--|-------------|------------|
| | . = Unknown (See comment above) | 185 | 0.33 |
| | 0 = No (See comment above) | 52508 | 95.00 |
| | 1 = Yes (See comment above)..... | 2578 | 4.66 |

The following variable, DRKIEM, was created to capture the use of any illicit drug other than marijuana with the respondent's most recent use of alcohol. It was created by examination of the following recoded variables: DRKCOC, DRKHER, DRKHAL, DRKINH, DRKANL, DRKTRN, DRKSTM, DRKMTH, and DRKSED. A positive response was assigned if a respondent answered 'Yes' to any of these individual drugs. A negative response was assigned if a respondent answered 'No' to all of these drugs or they were not a past month user of any illicit drug other than marijuana (IEMMON=0). If neither of these was true, then DRKIEM was set to missing.

HOUSEHOLD COMPOSITION (ROSTER)

HOUSEHOLD COMPOSITION (ROSTER)

NOTE: Starting from 2003, the following variable, EDFAM18, replaced the variable IRFAM18 (the imputation-revised indicator for having family members in the household aged 18 or older). Prior to 2003, the edited proxy variables were created using IRFAM18. However in 2003, the procedures for creating the edited proxy variables changed due to changes in the proxy questions in the questionnaire. The new procedures required an edited form of this indicator.

INCOME AND INSURANCE

The next questions are about [SAMPLE MEMBER POSS] health insurance coverage and the kinds and amounts of income that [SAMPLE MEMBER] and other people in your family receive.

NOTE: Beginning in 2003, respondents under the age of 65 who reported that they were covered by Medicare were asked to confirm their answer.

Medicare is a health insurance program for persons 65 and older and for certain disabled persons. Is [SAMPLE MEMBER A] covered by Medicare?

| MEDICARE | Len: 2 | COVERED BY MEDICARE | Freq | Pct |
|----------|--------|-----------------------------|-------|-------|
| | | 1 = Yes | 4599 | 8.32 |
| | | 2 = No..... | 50461 | 91.30 |
| | | 94 = DON'T KNOW..... | 151 | 0.27 |
| | | 97 = REFUSED | 35 | 0.06 |
| | | 98 = BLANK (NO ANSWER)..... | 25 | 0.05 |

NOTE: The variable CAIDCHIP was created from responses to the first question shown below for respondents who were aged 20 or older. For respondents who were aged 12 to 19, CAIDCHIP was created from responses to the two questions shown below. This variable replaces the variable MEDICAID that was present in prior years. Beginning in 2003, respondents aged 65 or older who reported that they were covered by Medicaid were asked to confirm their answer.

Medicaid is a public assistance program that pays for medical care for low income and disabled persons. The Medicaid program in [STATE FILL] is also called [MEDIFILL].

Is [SAMPLE MEMBER A] covered by Medicaid?

Is [SAMPLE MEMBER A] currently covered by [CHIPFILL]?

| CAIDCHIP | Len: 2 | COVERED BY MEDICAID/CHIP | Freq | Pct |

Starting in 2002, missing values in the variables describing the type of health insurance were imputed. In particular, missing values in the edited variables PRVHLTIN (private health insurance), MEDICARE, CAIDCHIP (Medicaid/children's state-assisted health insurance), CHAMPUS, and a modified version of HLTTINOS (other health insurance) were imputed. The overall health insurance variable was then created by combining the information from the detailed imputation-revised variables in the variable IRINSUR4. This differs from the method used in 1999-2001 where the edited health insurance variables were combined before imputation to create a recoded overall health insurance variable (INSUR3), the missing values of which were imputed in the variable IRINSUR3. As in previous years, missing values in PRVHLTIN were imputed. However, the name has changed (IRPINSUR in 1999-2001, IRPRVHLT in 2002) to reflect the fact that the imputation of missing values in PRVHLTIN was univariate from 1999-2001, and multivariate (with the other detailed variables) in 2002.

RECODED INCOME AND INSURANCE

RECODED INCOME AND INSURANCE

NOTE: The variables in this section are recoded variables that were created from one or more of the edited or imputed variables from the two preceding sections.

The following variable, GOVTPROG, was created by examination of these government assistance program variables: Supplemental Security Income (IRFAMSSI), food stamps (IRFSTAMP), cash assistance (IRFAMPMT), and non-cash assistance (IRFAMSVC).

| | | | |
|----------|--|-------------|------------|
| GOVTPROG | Len: 1 PARTICIPATED IN ONE OR MORE GOVT ASSIST PROGRAMS | Freq | Pct |
| | 1 = YES (ANY SOURCE VARIABLE=1) | 13256 | 23.98 |
| | 2 = NO (ALL SOURCE VARIABLES=2)..... | 42015 | 76.02 |

| | | | |
|--------|--------------------------------------|-------------|------------|
| INCOME | Len: 1 TOTAL FAMILY INCOME RECODE | Freq | Pct |
| | 1 = Less than \$20,000 | 11646 | 21.07 |
| | 2 = \$20,000 - \$49,999..... | 17140 | 31.01 |
| | 3 = \$50,000 - \$74,999..... | 8989 | 16.26 |
| | 4 = \$75,000 or More | 17496 | 31.65 |

The following variable, POVERTY2, indicates a person's family income relative to poverty thresholds. The U.S. Census Bureau assigns a poverty threshold for each combination of family size and number of children in the household. To be at 100% of the poverty threshold is equivalent to having a family income that is the same as the poverty threshold. A poverty level less than 100% indicates having a family income less than the poverty threshold and therefore defined by the Federal government as living in poverty. A poverty level greater than 100% indicates having a family income greater than the poverty threshold.

POVERTY2 was created for each individual based on their poverty threshold (determined by their age, family size, the number of children in the household, and total family income). Since NSDUH only collects categorical values of family income, for each level of income, the midpoint of each range was assigned as the effective family income. However, for the unbounded highest level of income, an effective family income of \$120,000 was assigned. Effective family income was divided by the poverty threshold and multiplied by 100 to show family income as a percentage of the federal poverty threshold. Respondents aged 18 to 22 currently living in a college dormitory (GQTYPE2='C') were set to SAS missing and do not have a valid value for this variable.

| | | | |
|----------|---|-------------|------------|
| POVERTY2 | Len: 1 POVERTY LEVEL (% OF US CENSUS POVERTY THRESHOLD) | Freq | Pct |

| | 3 = Income > 2X Fed Pov Thresh (See comment above)..... | 32157 | 58.18 |

NOTE: The variable HLCALLFG is a created "flag" variable that indicates when a respondent (or proxy) reported that the respondent was covered by all of the following: Medicare, Medicaid, the Children's Health Insurance Program (if aged 12 to 19), military health care, and private health insurance. The variable HLCALL99 also is a created "flag" variable that indicates when respondents were reported to be covered by Medicare, Medicaid, military health care, and private health insurance. This HLCALL99 variable is comparable to HLCALLFG in 1999, when these four types of health insurance were the only types of current coverage that were asked about in the interview.

RECODED INCOME AND INSURANCE

For IRINSUR4, a respondent is classified as having any health insurance (IRINSUR4=1) if they satisfied ANY of the following conditions.

- (1) Covered by private insurance (IRPRVHLT=1)
- (2) Covered by Medicare (IRMEDICR=1)
- (3) Covered by Medicaid/CHIPCOV (IRMCDCHP=1)
- (4) Covered by Champus, ChampVA, VA, or Military (IRCHMPUS=1)
- (5) Covered by other health insurance (IROTHHLT=1)

A respondent is classified as NOT having any health insurance (IRINSUR4=2) if they meet EVERY one of the following conditions.

- (1) Not Covered by private insurance (IRPRVHLT=2)
- (2) Not Covered by Medicare (IRMEDICR=2)
- (3) Not Covered by Medicaid/CHIPCOV (IRMCDCHP=2)
- (4) Not Covered by Champus, ChampVA, VA, or Military (IRCHMPUS=2)
- (5) Not Covered by other health insurance (IROTHHLT=2)

CORE DEMOGRAPHICS

CORE DEMOGRAPHICS

NOTE: After a respondent has entered his/her birthdate in the first part of the questionnaire, he/she has multiple opportunities to change his/her age in response to consistency checks throughout the questionnaire. It is therefore possible for the age recorded by the respondent at the beginning of the questionnaire to be different than the age at the end of the questionnaire. The final age variable is determined using these two constituent age variables, in addition to the age calculated from the raw birthdate and the final edited interview date, the age entered in the questionnaire roster (if it exists), and the pre-interview screener age.

IMPUTED DEMOGRAPHICS

IMPUTED DEMOGRAPHICS

Beginning with the 2002 survey, missing values for the gender question (QD01) were no longer permitted. Thus, no imputation was required. This variable has the prefix 'IR', which stands for 'Imputation Revised', only for the sake of consistency with data sets from earlier surveys.

NON-CORE DEMOGRAPHICS

NON-CORE DEMOGRAPHICS

For the remaining questions, I will read the question out loud, you can tell me your answer, and I will enter it into the computer.

How many times in the past 12 months have you moved?

| MOVEPYR2 | Len: 3 # TIMES MOVED PAST 12 MONTHS - RECODE | Freq | Pct |
|------------------------------|--|-------|-----|
| 0 = 0 times..... | 38861 | 70.31 | |
| 1 = 1 time..... | 10189 | 18.43 | |
| 2 = 2 times..... | 3241 | 5.86 | |
| 3 = 3 or more times..... | 2233 | 4.04 | |
| 994 = DON'T KNOW..... | 20 | 0.04 | |
| 997 = REFUSED | 1 | 0.00 | |
| 998 = BLANK (NO ANSWER)..... | 726 | 1.31 | |

NOTE: EIMOVPYR is an indicator of editing to MOVESPY2. The default value for EIMOVPYR is 1, when no editing was done to MOVESPY2. EIMOVPYR has a value of 2 when the item corresponding to MOVESPY2 had missing data but it could be logically inferred that the respondent moved zero times in the past 12 months, because SNMOV5Y2 or YEMOV5Y2 indicated zero moves in the past 5 years.

| EIMOVYRR | Len: 1 EDITING INDICATOR FOR MOVESPY2 | Freq | Pct |
|----------------------------------|---------------------------------------|-------|-----|
| 1 = Questionnaire data..... | 29872 | 54.05 | |
| 2 = Logically assigned data..... | 25399 | 45.95 | |

NOTE: MOVYRFLG is a "flag" variable that indicates inconsistent reports between moves in the past 12 months in MOVESPY2 and moves in the past 5 years from either SNMOV5Y2 or YEMOV5Y2. The default value for MOVYRFLG is 98 (blank). MOVYRFLG has a value of 1 when respondents reported more moves in the past 12 months than they reported for moves in the past 5 years. However, no editing was done to MOVESPY2, SNMOV5Y2, or YEMOV5Y2 in these situations.

| MOVYRFGR | Len: 2 CONSISTENCY FLAG FOR MOVESPY2 VS SNMOV5Y2/YEMOV5Y2 | Freq | Pct |
|---|---|-------|-----|
| 1 = Moves in past yr greater than moves in past 5 yrs | 394 | 0.71 | |
| 98 = BLANK (NO ANSWER)..... | 54877 | 99.29 | |

NOTE: The school enrollment variable SCHENRL is analogous to the variable ENROLED from prior years. SCHENRL takes into account information from follow-up probes if respondents originally reported that they were not enrolled in school. Based on these probes, respondents were coded as yes (i.e., enrolled) if they were on break from school and intended to return to school once their break was over. SCHENRL was assigned a code of 11 if the respondent reported currently being enrolled but there was uncertainty about the respondent's school enrollment status.

The next questions are about school. Are you now attending or are you currently enrolled in school? By "school," we mean an elementary school, a junior high or middle school, a high school, or a college or university. Please include home schooling as well.

| SCHENRL | Len: 2 NOW ENROLLED IN ANY SCHOOL | Freq | Pct |
|--|-----------------------------------|-------|-----|
| 1 = Yes | 21070 | 38.12 | |

EMPLOYMENT AND WORKPLACE

EMPLOYMENT AND WORKPLACE

NOTE: The variable JBSTATR2 was created from questions that asked respondents whether they worked in the past week, whether they usually work 35 or more hours per week, and where relevant, reasons why they did not work in the past week. Respondents who did not know or refused to report whether they worked in the past week but indicated that they did not work in the past 12 months were classified in JBSTATR2 as not having a job. In addition, respondents who reported that they had no job but were looking for work were not classified as being in the labor force unless they reported making specific efforts to find work.

| JBSTATR2 | Len: 3 WORK SITUATION IN PAST WEEK - RECODE | Freq | Pct |

IMPUTED EMPLOYMENT AND WORKPLACE

IMPUTED EMPLOYMENT AND WORKPLACE

The following variable, EMPSTATY, was created to promote consistency across survey years. The similar variable EMPSTAT3 was created in 1999 and 2000; it could not be created in the survey years since 2001 because of changes to the questionnaire. (See the comment before JBSTATR2 for more details.) The levels of EMPSTATY are close to those in the Current Population Survey. The main difference is that EMPSTATY considers people who did not have a job last week and were not looking for a job all to be unemployed. In comparison, the CPS definition requires people who did not have a job last week and were not looking for a job to be waiting to be recalled to their old job, in order for them to be classified as unemployed.

| EMPSTATY | Len: 2 IMPUTATION REVISED EMPLOYMENT STATUS | Freq | Pct |
|----------|---|-------|-------|
| 1 | = Employed full time | 22256 | 40.27 |
| 2 | = Employed part time..... | 8391 | 15.18 |

SEGMENT

SEGMENT

The Census provides data for five types of American Indian areas (AIAs):

- Federally-recognized American Indian reservations (AIRs) and off-reservation trust land areas – areas that have been set aside by the U.S. for the use of American Indian tribes. The tribes have primary governmental authority over the AIRs and associated off-reservation trust lands. Federal AIRs may cross State and all other area boundaries.
- State-recognized American Indian Reservations (SAIRs) - reservations established by some State governments for tribes recognized by the State. The tribes may have governmental authority over the SAIRs. SAIRs must be defined within a single State but may cross county and other types of boundaries.
- Oklahoma tribal statistical areas (OTSAs) - areas intended to represent the former American Indian reservations that existed in Indian and Oklahoma territories prior to Oklahoma statehood in 1907. OTSAs are contained within the State of Oklahoma but may cross all other area boundaries.
- Tribal designated statistical areas (TDSAs) - areas identified and delineated for federally-recognized American Indian tribes that do not currently have an AIR or off-reservation trust land. A TDSA is intended to encompass a compact and contiguous area that contains a concentration of individuals who identify with the delineating federally-recognized American Indian tribe. TDSAs may cross State and all other area boundaries.
- State designated tribal statistical areas (SDTSAs) - areas identified and delineated for State-recognized tribes that are not federally-recognized and do not have an AIR or off-reservation trust land. SDTSAs provide State-recognized tribes without reservations statistical data for a geographic area that encompasses a substantial concentration of tribal members. SDTSAs must be defined within a single State but may cross county and other types of boundaries.

The AIAs are mutually exclusive, i.e., no AIA can overlap another AIA. In cases where more than one tribe claims jurisdiction over an area, the Census Bureau creates a joint-use area as a separate entity to define this area of dual claims.

Some NSDUH segments can cross more than one AIA. In order to assign a single AIA to a segment, a 'majority' AIA variable was created by summing the total number of dwelling units within each of the AIAs within the segment and then assigning the AIA with the most dwelling units to that segment. The resulting 'majority' AIAs were summarized to form MAIIN102. MAIIN102 is based on 2010 census data.

| MAIIN102 | Len: 1 | MAJORITY AMER INDIAN AREA INDICATOR FOR SEGMENT | Freq | Pct |
|----------|--------|--|-------|-------|
| | | 1 = Segment in an American Indian area | 1129 | 2.04 |
| | | 2 = Segment not in an American Indian area | 54142 | 97.96 |

BLOCK

The Census provides data for five types of American Indian areas (AIAs):

- Federally-recognized American Indian reservations (AIRs) and off-reservation trust land areas – areas that have been set aside by the U.S. for the use of American Indian tribes. The tribes have primary governmental authority over the AIRs and associated off-reservation trust lands. Federal AIRs may cross State and all other area boundaries.
- State-recognized American Indian Reservations (SAIRs) - reservations established by some State governments for tribes recognized by the State. The tribes may have governmental authority over the SAIRs. SAIRs must be defined within a single State but may cross county and other types of boundaries.
- Oklahoma tribal statistical areas (OTSAs) - areas intended to represent the former American Indian reservations that existed in Indian and Oklahoma territories prior to Oklahoma statehood in 1907. OTSAs are contained within the State of Oklahoma but may cross all other area boundaries.
- Tribal designated statistical areas (TDSAs) - areas identified and delineated for federally-recognized American Indian tribes that do not currently have an AIR or off-reservation trust land. A TDSA is intended to encompass a compact and contiguous area that contains a concentration of individuals who identify with the delineating federally-recognized American Indian tribe. TDSAs may cross State and all other area boundaries.
- State designated tribal statistical areas (SDTSAs) - areas identified and delineated for State-recognized tribes that are not federally-recognized and do not have an AIR or off-reservation trust land. SDTSAs provide State-recognized tribes without reservations statistical data for a geographic area that encompasses a substantial concentration of tribal members. SDTSAs must be defined within a single State but may cross county and other types of boundaries.

The AIAs are mutually exclusive, i.e., no AIA can overlap another AIA. In cases where more than one tribe claims jurisdiction over an area, the Census Bureau creates a joint-use area as a separate entity to define this area of dual claims.

The variable AIIND102 is based on 2010 census data and is defined by mapping the census block in which a respondent resides to the 2010 census file.

| AIIND102 | Len: 1 | AMER INDIAN AREA INDICATOR | Freq | Pct |
|----------|--------|---|-------|-------|
| | | 1 = Census block in an American Indian area | 1144 | 2.07 |
| | | 2 = Census block not in an American Indian area | 54127 | 97.93 |

APPENDIX A

Drug Codes for Open-Ended Questions

APPENDIX A

Drug Codes for Open-Ended Questions (2014 CAI NSDUH)

Numerical Listing

NOTE: Due to changes in the survey instrument in 1999,
codes for some drugs may differ from those used in prior survey years.

| Code | Definition |
|------|--|
| 101 | Butisol |
| 102 | Buticaps |
| 103 | Amytal |
| 104 | Mebaral |
| 105 | Placidyl, Ethchlorvynol |
| 106 | Doriden |
| 107 | Noludar |
| 108 | Nembutal |
| 109 | Seconal |
| 110 | Tuinal |
| 111 | Dalmane, Flurazepam |
| 112 | Restoril, Temazepam |
| 113 | Halcion, Triazolam |
| 114 | Amobarbital |
| 115 | Phenobarbital |
| 116 | Methaqualone, Sopor, Quaalude [see also 138] |
| 117 | Chloral hydrate, Noctec |
| 118 | Pentobarbital, Pentothal, Sodium pentothal, Thiopental |
| 119 | Secobarbital |
| 120 | Downers; OTHER Sedative, NOT OTHERWISE SPECIFIED |
| 121 | USED SEDATIVE, DON'T KNOW NAME |
| 122 | Over-the-counter sleep aid; not specified <OTC> |
| 123 | Unisom <OTC> |
| 124 | Yellow jackets |
| 126 | Sominex <OTC> |
| 127 | Nytol <OTC> |
| 128 | Nervine <OTC> |
| 129 | Reds |
| 130 | Phenergan, Promethazine |
| 131 | Haldol, Haloperidol |
| 132 | Sleepettes <OTC> |
| 136 | Dimetapp <OTC> |
| 137 | 7-14 |
| 138 | Mandrax, Mandrix [see also 116] |
| 139 | Black widows |
| 140 | Seldane |

| Code | Definition |
|------|---|
| 141 | Dilantin |
| 142 | Belladonna |
| 145 | Red devil(s) |
| 146 | Bentyl, Dicyclomine |
| 148 | Actifed <OTC> |
| 152 | Eskabarb |
| 153 | Luminal |
| 154 | Alurate |
| 156 | Sodium barbital |
| 157 | Barbiturates |
| 159 | Octanox |
| 163 | Blue meanies |
| 164 | Yellow zombies |
| 171 | NyQuil <OTC> |
| 172 | Dream Ease <OTC> |
| 173 | Wafers |
| 174 | Ambien, Stilnox, Zolpidem |
| 176 | Melatonin <OTC> |
| 177 | Bean |
| 178 | Quetiapine, Seroquel |
| 179 | Water tee [sic] |
| 180 | Tylenol P.M. <OTC> |
| 181 | Excedrin P.M. <OTC> |
| 182 | Melzone |
| 183 | Mysoline |
| 184 | Red and blues |
| 186 | Butalbital |
| 187 | Belladonna plant/flower/root, deadly nightshade |
| 188 | Estazolam, Prosom |
| 189 | Sonata, Zaleplon |
| 190 | Dormin <OTC> |
| 191 | Blues |
| 192 | Promazine |
| 193 | Meclizine |
| 194 | Quiet World <OTC> |
| 195 | Lotusate, Talbutal |
| 196 | Simply Sleep <OTC> |
| 197 | Topamax, Topiramate |
| 198 | Seducaps |
| 199 | Ansiovit <OTC> |

| Code | Definition |
|-------------|---|
| 201 | Valium, Diazepam |
| 202 | Librium, Chlordiazepoxide HCl |
| 203 | Limbitrol [see also 276] |
| 204 | Menrium |
| 205 | Serax, Oxazepam |
| 206 | Tranxene, Clorazepate, Tranxilium |
| 207 | Ativan, Lorazepam, Orfidal |
| 208 | Centrax |
| 209 | Xanax, Alprazolam, Tafil, Xanax bars |
| 210 | Paxipam |
| 211 | BuSpar, Buspirone |
| 212 | Miltown |
| 213 | Equanil |
| 214 | Deprol |
| 215 | Vistaril |
| 216 | Atarax, Hydroxyzine |
| 217 | Durrax |
| 219 | SK-Lygen |
| 220 | Meprobamate |
| 221 | OTHER Tranquilizer, NOT OTHERWISE SPECIFIED |
| 222 | USED TRANQUILIZER, DONT KNOW NAME |
| 223 | Carbacot, Marbaxin, Methocarbamol, Robaxin |
| 224 | Triavil |
| 225 | Desyrel, Trazodone hydrochloride |
| 226 | Stelazine, Trifluoperazine HCl |
| 227 | Thorazine |
| 228 | Amitriptyline, Elavil |
| 229 | Librax |
| 230 | Compazine, Prochlorperazine |
| 232 | Mellaril |
| 233 | Trilafon, Perphenazine |
| 234 | Flexeril, Cyclobenzaprine |
| 235 | Imipramine |
| 237 | Dormicum, Hypnoven, Midazolam, Versed |
| 240 | Lithium carbonate, Lithonate |
| 241 | Prozac, Fluoxetine |
| 242 | Equagesic |
| 243 | Etrafon |
| 245 | Tryptophan |
| 246 | Klonopin, Clonazepam, Diocam, Rivotril |
| 247 | Adapin, Doxepin, Sinequan |
| 249 | Asendin |
| 250 | Aventyl, Nortab, Nortriptyline, Pamelor |
| 252 | Strawberry whip cream |
| 257 | Zestril |
| 259 | Desipramine, Norpramin |

| Code | Definition |
|-------------|---|
| 260 | PCB |
| 262 | Prolixin |
| 263 | Vivactil |
| 266 | Verstran |
| 267 | Marezine |
| 268 | Rohypnol, Flunitrazepam, roche, roofies |
| 270 | Torzien |
| 271 | Sertraline hydrochloride, Zoloft |
| 275 | Loxitane |
| 276 | Limbitrol DS [see also 203] |
| 278 | Benzodiazepines |
| 280 | Ketaset |
| 281 | Blue ringer |
| 282 | Clozapine, Clozaril |
| 283 | Paroxetine, Paxil |
| 284 | Tofranil |
| 285 | Risperdal, Risperidol, Resperidone |
| 288 | Baclofen |
| 289 | Olanzapine, Zyprexa |
| 290 | Skelaxin |
| 290 | Metaxalone |
| 291 | Celexa, Citalopram |
| 292 | Serzone |
| 293 | Anafranil, Clomipramine |
| 294 | Fluvoxamine, Luvox |
| 295 | Mirtazapine, Remeron |
| 296 | Novoxapam |
| 297 | Cafia |
| 298 | Acepromazine, PromAce |
| 299 | Code no longer used |
| 301 | Dexedrine |
| 302 | Dexamyl |
| 303 | Eskatrol |
| 304 | Benzedrine |
| 305 | Biphetamine |
| 306 | Desoxyn |
| 307 | Tenuate, Diethylpropion |
| 308 | Tepanil |
| 309 | Benzphetamine, Didrex |
| 310 | Plegine |
| 311 | Preludin |
| 312 | Ionamin |
| 313 | Acxion, Adipex-P, Fastin, Phentermine |
| 314 | Pondimin, Fenfluramine |
| 315 | Voranil |
| 316 | Sanorex |
| 317 | Mazanor |
| 318 | Ritalin, Methylphenidate |
| 319 | Cylert |
| 320 | Dextroamphetamine |

| Code | Definition |
|-------------|--|
| 321 | Methedrine |
| 322 | Methamphetamine ("ice" or "crank"), Meth [see also 3126] |
| 323 | Obedrin-L.A. |
| 324 | Uppers; OTHER Stimulant, NOT OTHERWISE SPECIFIED |
| 325 | USED STIMULANT, DON'T KNOW NAME |
| 326 | White cross |
| 327 | Black beauties, black beauty |
| 328 | Pink hearts |
| 329 | Bird's eggs, robin's eggs, speckled eggs |
| 330 | Blue birds, blue jays, blue robins, speckled bird |
| 331 | Blancs, whites |
| 332 | Ephedrine |
| 333 | 357 Magnum, Magnum 44 <OTC> |
| 334 | Crossroads, cross tops |
| 335 | Dexatrim <OTC> [see also 347, 378] |
| 336 | Diet pills |
| 337 | White molly |
| 339 | Amphetamines |
| 341 | Pink roses |
| 342 | Purple hearts |
| 343 | Nitroglycerine |
| 344 | Bennies |
| 345 | Black molly |
| 346 | Marax |
| 347 | Phenylpropanolamine <OTC> [see also 335, 378] |
| 348 | Crystal |
| 349 | Bontril, Melfiat, Phendimetrazine |
| 351 | Cathinone, cat, khat, q'at |
| 352 | Lemons |
| 353 | No-Doz <OTC> |
| 354 | Vivarin <OTC> |
| 355 | Crystal meth |
| 356 | Dexies |
| 357 | Heart-shaped black pills |
| 358 | 20/20 |
| 359 | Criss cross |
| 360 | Rainbow speed |
| 363 | Bam(s) |
| 364 | Pseudoephedrine <OTC> |
| 366 | Duromine |
| 368 | Peanut butter crank |
| 369 | Artane [see also 8329] |
| 371 | Cogentin |
| 374 | Christmas tree(s) |
| 376 | TAC |
| 377 | Albuterol, Pro-Air, Proventil, Ventolin |
| 378 | Control <OTC> [see also 335, 347] |

| Code | Definition |
|-------------|---|
| 379 | Hearts |
| 380 | Pink ladies |
| 381 | P.O.T.C. |
| 382 | Footballs, pink footballs, purple footballs |
| 383 | Pre-Sate |
| 384 | Little crosses |
| 385 | Little pink ones |
| 386 | Herbal ecstasy |
| 388 | Pink lemon |

| 8352 | Lisinopril | 1 | 0.55 |

APPENDIX C

Tobacco Brand Codes for Open-Ended Questions

The final tobacco brand codes were created from listings of brands that appeared on the computer screen(s) corresponding to that particular type of tobacco, or from answers that respondents specified, if they indicated use of "a brand not on this list." For each tobacco product (cigarettes, chewing tobacco, snuff, and cigars), the available responses in the contiguous order of appearance on the screen (based on the 1999 through 2004 CAI instruments) were used to initially create each tobacco product group. Although the tobacco brands that appeared on the screens for respondents changed beginning in 2005 for cigarettes, snuff, and cigars, the editing and coding procedures in this survey year continued to use existing codes that had been developed prior to 2005. For example, American Spirit cigarettes became the first brand on the screen for question CG11 in 2005 ("The next questions are about the brand of cigarettes you smoke -- the brand is the name that is on the pack. During the past 30 days, what brand of cigarettes did you smoke most often?"). For consistency with prior years, however, mention of American Spirit cigarettes continues to retain a code of 161, even though CG11=1 (with this answer verified in question CG13) would indicate that the respondent smoked American Spirit cigarettes most often in the past 30 days.

Tobacco brand codes 100-199 and 1000-1999 represent cigarette brands, codes 200-299 and 2000-2999 represent chewing tobacco brands, codes 300-399 and 3000-3999 represent snuff brands, and codes 400-499 and 4000-4999 represent cigar brands. Additional codes were added to each group list as needed. Miscellaneous tobacco and non-tobacco groups are represented by the 500-599, 600-699, 700-799, and 800-899 series.

For tobacco brands that respondents could choose from a list, no distinction was made in the coding between situations where respondents chose that particular brand from the list, and those where respondents reported use of "a brand not on this list" and then specified use of that brand. In addition, there was no distinction between particulars such as menthol, light, or full-flavor varieties in the coding. In addition, the coding took into account situations where respondents might specify a brand that corresponded to a different type of tobacco. For example, if a snuff brand was specified as a brand of "chewing tobacco," then the reported brand of "chewing tobacco" was assigned a code in the 300 series, corresponding to snuff.

APPENDIX C

Tobacco Brand Codes for Open-Ended Questions (2014 CAI NSDUH)

Numerical Listing

| Code | Definition |
|-------------------------|------------------------|

APPENDIX D

Recoded Substance Dependence and Abuse Variable Documentation

The 2014 National Survey on Drug Use and Health (NSDUH) computer-assisted interviewing (CAI) instrumentation included questions that were designed to measure dependence and abuse of illicit drugs, alcohol, and dependence on nicotine (cigarettes). For nicotine (cigarettes), questions pertaining to dependence were based on criteria from the Nicotine Dependence Syndrome Scale (NDSS; Shiffman, Hickcox, Gnys, Paty, & Kassel, 1995; Shiffman, Waters, & Hickcox, 2004) and the Fagerstrom Test of Nicotine Dependence (FTND; Fagerstrom, 1978; Heatherton, Kozlowski, Frecker, & Fagerstrom, 1991). The above-mentioned criteria were first used to measure nicotine dependence in NSDUH in 2003. For substances other than nicotine (cigarettes), which include alcohol, cocaine, heroin, pain relievers, sedatives, marijuana, tranquilizers, stimulants, hallucinogens, and inhalants, dependence and abuse questions were based on the criteria in the *Diagnostic and Statistical Manual of Mental Disorders*, 4th edition (*DSM-IV*; American Psychiatric Association, 1994). Due to the complexity of defining the dependence and abuse variables, additional details regarding the creation of these variables are included in this appendix.

Given the current editing and imputation procedures, along with the use of both core and noncore questions to determine whether a respondent was asked the dependence and abuse questions, users should be aware of the possible inconsistencies that may exist between the dependence and abuse variables and the imputed substance use and frequency of use variables for selected substances.

Responses from core substance use, frequency of substance use, and noncore substance use questions were used as criteria to determine whether a respondent was asked the alcohol and/or illicit drug dependence and abuse questions. Unknown responses to the core substance use and frequency of substance use questions were imputed. However, the imputation process did not take into account data reported in the noncore CAI modules. Therefore, responses to the dependence and abuse questions that were inconsistent with responses to the imputed substance use or frequency of use questions could exist. These inconsistent responses remained in the edited data and were not excluded in the creation of the dependence and abuse recodes. Since different sets of criteria were used as skip logic for each substance, different types of inconsistencies between the dependence and abuse variables and the imputed substance use and frequency of substance use variables could occur by substance. These inconsistencies are discussed in further detail in the appropriate sections on each substance.

Differences also exist between the methodologies used for determining dependence on nicotine (cigarettes) and for determining dependence on other substances. For example, to classify as nicotine (cigarette) dependent, a respondent must be a past month user of cigarettes. However, to classify as dependent on one of the other substances by *DSM-IV* criteria, a respondent must be a past year user of that substance. A second difference is that the NDSS questions are imputed in order to optimize the number of respondents who may be classified for nicotine (cigarette) dependence, unlike the *DSM-IV* dependence questions that are used in the nonimputed, edited form.

Nicotine (Cigarette) Dependence

The 2014 NSDUH CAI questions designed to assess nicotine (cigarette) dependence were based on the NDSS and the FTND. To identify patterns of nicotine (cigarette) dependence within the 2014 NSDUH data, variable indicators were created to measure dependence on nicotine through the use of cigarettes. A respondent was defined as being dependent if he or she met either the NDSS or the FTND criteria for dependence.

Nicotine Dependence Syndrome Scale (NDSS):

The conceptual roots of the NDSS are similar to those behind the *DSM-IV* concept of dependence (Edwards & Gross, 1976). The 2014 NSDUH contains 19 NDSS questions that address five aspects of dependence:

1. Smoking drive (compulsion to smoke driven by nicotine craving and withdrawal)
 - a. After not smoking for a while, you need to smoke in order to feel less restless and irritable (IRCGIRTB)
 - b. When you don't smoke for a few hours, you start to crave cigarettes (IRCGCRV)
 - c. You sometimes have strong cravings for a cigarette where it feels like you're in the grip of a force you can't control (IRCGCRGP)
 - d. You feel a sense of control over your smoking - that is, you can "take it or leave it" at any time (IRCGNCTL)
 - e. You sometimes worry that you will run out of cigarettes (IRCGROUT).
2. Nicotine tolerance
 - a. Since you started smoking, the amount you smoke has increased (IRCGINCR)
 - b. Compared to when you first started smoking, you need to smoke a lot more now in order to be satisfied (IRCGSAT)
 - c. Compared to when you first started smoking, you can smoke much, much more now before you start to feel anything (IRCGLMR).
3. Continuous smoking
 - a. You smoke cigarettes fairly regularly throughout the day (IRCGRGDY)
 - b. You smoke about the same amount on weekends as on weekdays (IRCGRGWK)
 - c. You smoke just about the same number of cigarettes from day to day (IRCGRGNM)
 - d. It's hard to say how many cigarettes you smoke per day because the number often changes (IRCGNCG)
 - e. It's normal for you to smoke several cigarettes in an hour, then not have another one until hours later (IRCGSLHR).
4. Behavioral priority (preferring smoking over other reinforcing activities)
 - a. You tend to avoid places that don't allow smoking, even if you would otherwise enjoy them (IRCGAVD)
 - b. There are times when you choose not to be around your friends who don't smoke because they won't like it if you smoke (friends question - CIGFNLKE)
 - c. Even if you're traveling a long distance, you'd rather not travel by airplane because you wouldn't be allowed to smoke (IRCGPLN).
5. Stereotypy (fixed patterns of smoking)
 - a. Do you have any friends who do not smoke cigarettes (friends question - CIGFNSMK)

- b. The number of cigarettes you smoke per day is often influenced by other things - how you're feeling, or what you're doing, for example (IRCGINFL)
- c. Your smoking is not affected much by other things. For example, you smoke about the same amount whether you're relaxing or working, happy or sad, alone or with others (IRCGNINF).

Each of these five domains can be assessed by a separate measure, but an average score across all domains also can be obtained for overall nicotine dependence (Shiffman et al., 2004). The NDSS algorithm for calculating this average score was based on the respondent's answers to 17 of the 19 questions listed above. The items regarding nonsmoking friends (4b - CIGFNLKE and 5a - CIGFNSMK) were excluded due to higher item nonresponse rates.

For respondents who answered 16 of the 17 NDSS nicotine (cigarette) dependence questions used in the NDSS algorithm, imputation using the 16 answered NDSS items as covariates in a weighted least squares regression model was implemented (Center for Behavioral Health Statistics and Quality, in press).

Responses to items IRCGIRTB, IRCGCRV, IRCGCRGP, IRGAVD, IRCGPLN, IRCGROUT, IRCGRGDY, IRCRGWKR, IRCGRGNM, IRCGNINF, IRCGINCR, IRGSAT, and IRGLMR were coded from 1 to 5 where

- 1= Not at all true
- 2= Somewhat true
- 3= Moderately true
- 4= Very true
- 5= Extremely true.

Responses to items IRGNCTL, IRGNCG, IRGSLHR, and IRGINFL were reverse coded from 5 to 1 where

- 5= Not at all true
- 4= Somewhat true
- 3= Moderately true
- 2= Very true
- 1= Extremely true.

For respondents who reported smoking cigarettes in the past month, the NDSS score, NDSSANSP, was calculated as the sum of the responses to the previous questions divided by 17. The NDSS score was calculated only for those who had responses to all 17 questions after imputation. If a respondent did not have valid responses (based on actual reporting and imputation) to all 17 questions, then his or her NDSS score was defined as missing.

A respondent was defined as nicotine dependent, NDSSDNSP=1, if the NDSS score was greater than or equal to 2.75. If the NDSS score was less than 2.75 or missing, then the respondent was determined to be nondependent, NDSSDNSP=0, based on the NDSS. The threshold of 2.75 was derived by examining the distribution of scores in other samples of smokers who were administered the NDSS, including a contrast of scores obtained for nondependent smokers (chippers) versus heavy smokers (Shiffman, Paty, Kassel, Gnys, & Zettler-Segal, 1994).

Fagerstrom Test of Nicotine Dependence (FTND):

The FTND is a multi-item measure of dependence, but much of its ability to discriminate dependent smokers derives from a single item assessing how soon after waking smokers have their first cigarette (Heatherton, Kozlowski, Frecker, Rickert, & Robinson, 1989). Because most nicotine is cleared from the bloodstream overnight, smokers typically wake in nicotine deprivation, and rapid movement to smoke is considered a sign of dependence. A respondent who reported smoking cigarettes in the past month was defined as nicotine dependent based on the FTND, FTNDDNSP, if the first cigarette smoked was within 30 minutes of waking up on the days he or she smoked (CIGWAKE=1 or 2).

Nicotine (Cigarette) Dependence:

Using both the NDSS and the FTND, a respondent was defined as having nicotine (cigarette) dependence in the past month, DNICNSP, if he or she met either the NDSS (NDSSDNSP=1) or FTND (FTNDDNSP=1) criteria for dependence.

DSM-IV Dependence and Abuse

The 2014 NSDUH CAI questions were designed to assess substance dependence and abuse of alcohol and illicit drugs based on the criteria for dependence and abuse in the *DSM-IV* (American Psychiatric Association, 1994). For marijuana, inhalants, hallucinogens, and tranquilizers, a respondent was defined as having dependence if he or she met three or more of six standard dependence criteria. A seventh withdrawal criterion was added for alcohol, pain relievers, cocaine, heroin, sedatives, and stimulants. A respondent was defined as having dependence if he or she met three or more of seven dependence criteria. For each illicit drug and alcohol, a respondent was defined as having abused that substance if he or she met one or more of four abuse criteria and was determined not to be dependent upon the substance of interest.

Dependence and abuse variables are mutually exclusive with dependence taking precedence (i.e., dependence is determined first and respondents are only classified as having abused a substance if they are not already classified as dependent, regardless of responses to the abuse questions). Therefore, it is possible for the variables showing abuse of a combination of substances to not correspond with the abuse status of those individual substances. For example, a respondent who is classified as having abused cocaine in the past year may be classified as not having abused illicit drugs because he or she was dependent on marijuana and already classified as being dependent on illicit drugs.

For alcohol and marijuana, the criteria used to determine whether a respondent was asked the dependence and abuse questions included past year use of the respective substance and reported use of the respective substance on more than 5 days in the past year. Because respondents were asked the dependence and abuse questions if they reported substance use in the past year but did not report a valid response for their frequency of substance use data, inconsistencies could occur where the imputed frequency of use variable indicated less frequent use than required for respondents to be asked the dependence and abuse questions originally.

For heroin and cocaine, the criteria included reporting past year use in a core drug module or past year use in the noncore special drugs module. Inconsistencies could occur when core substance use variables indicated no use in the past year but a dependence and abuse variable indicated substance dependence or abuse.

For pain relievers, tranquilizers, and inhalants, the only criterion used was that the respondent reported past year use of the respective substance. Thus, no inconsistencies could occur where the respondent was considered a nonuser of the substance but was dependent on or abusing the substance.

For stimulants, prior to the 2005 NSDUH, the criteria included only reporting past year stimulant use in a core drug module or past year use in the noncore special drugs module. Inconsistencies could occur when either the core or the noncore substance use variables indicated no use in the past year but a dependence and abuse variable indicated substance dependence or abuse. In 2005 and 2006, new questions were added to the noncore special drugs module to identify respondents who had used methamphetamine but had failed to report it in the core prescription stimulant module because they did not think of methamphetamine as a prescription drug. In 2005, new questions were added concerning past year methamphetamine use: "Have you ever, even once, used methamphetamine?" and "Have you ever, even once, used a needle to inject methamphetamine?" In 2006, an additional follow-up consistency question was added to confirm prior responses about methamphetamine use: "Earlier, the computer recorded that you have never used methamphetamine. Which answer is correct?" People identified as methamphetamine users in these new questions were also administered the stimulant dependence

and abuse questions. However, based on the decisions made during the analysis of the new methamphetamine data,¹ respondents who met the criteria for stimulant dependence or abuse but had reported past year methamphetamine use *only* on these new 2005 and 2006 special drug use questions (i.e., did not indicate methamphetamine use from the core drug module or other questions in the noncore special drugs module) were categorized as NOT having past year stimulant dependence or abuse. In the 2008 NSDUH, the skip logic was further modified allowing respondents who reported using Adderall® in the noncore special drugs section but failed to report it in the core prescription stimulant module to be asked the stimulant dependence and abuse questions. Consistent with the decision made for the new methamphetamine questions, those respondents who met the criteria for stimulant dependence or abuse based only on the new Adderall® questions were also categorized as NOT having past year stimulant dependence or abuse. This decision prevents additional inconsistencies between core and noncore indicators of use. Furthermore, if these same respondents were categorized as not having past year dependence on or abuse of any other substance (e.g., pain relievers, tranquilizers, or sedatives for the psychotherapeutic drug grouping), then they were categorized as NOT having past year dependence on or abuse of psychotherapeutics, illicit drugs, illicit drugs or alcohol, and illicit drugs and alcohol.

For hallucinogens and sedatives, prior to the 2008 NSDUH, the criteria included only reporting past year use in a core drug module. Thus, no inconsistencies could occur where the respondent was considered a nonuser of the substance but was dependent on or abusing the substance. In 2008, questionnaire logic for determining hallucinogen and sedative dependence or abuse was modified. The revised skip logic used information collected in the noncore special drugs module in addition to questions from the core drug modules. Respondents were asked about hallucinogen dependence and abuse if they reported in the noncore special drugs module additionally using Ketamine, DMT, AMT, Foxy, or *Salvia divinorum* and were asked about sedative dependence and abuse if they reported additionally using Ambien®. Consistent with the previous decision to exclude respondents whose methamphetamine use was based solely on responses in a noncore module from being classified as having dependence or abuse, respondents who indicated past year hallucinogen or sedative use based solely on these noncore special drug questions were categorized as NOT having past year dependence or abuse regardless of how they answered the dependence and abuse questions. This decision prevents any inconsistencies between core and noncore indicators of use for these drugs. Further details are provided in Section B.4.3 of Appendix B of the 2009 summary of national findings (Office of Applied Studies, 2010a; 2010b).

A respondent might have provided ambiguous information about past year use of any individual substance, in which case these respondents were not asked the dependence and abuse questions for that substance. Subsequently, these respondents could be imputed to be past year users of the respective substance. In this situation, the dependence and abuse data were unknown. Thus, these respondents were classified as not dependent on or abusing the respective substance, without ever having been asked the dependence and abuse questions.

Listed below are the definitions used for each of the individual dependence and abuse measures, as well as specific notes about inconsistency issues for each measure. Additional variables were created using a combination of these individual dependence and abuse measures and are listed in the main part of the codebook.

¹ See Section B.4.8 of Appendix B in the 2008 NSDUH national findings for more details on the methamphetamine analysis (Office of Applied Studies, 2009).

Substance Dependence Recodes Defined with Withdrawal Criteria

ALCOHOL:

To be defined with alcohol dependence, DEPNDALC, a respondent must have met three or more of these alcohol dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of alcohol (ALCLOTTM=1 or ALCGTOVR=1)
- (2) Used alcohol more often than intended or was unable to keep set limits on alcohol use (ALCKPLMT=2)
- (3) Needed to use alcohol more than before to get desired effects or noticed that same amount of alcohol use had less effect than before (ALCNDMOR=1 or ALCLSEFX=1)
- (4) Inability to cut down or stop using alcohol every time tried or wanted to (ALCCUTEV=2)
- (5) Continued to use alcohol even though it was causing problems with emotions, nerves, mental health, or physical problems (ALCEMCTD=1 or ALCPHCTD=1)
- (6) Alcohol use reduced or eliminated involvement or participation in important activities (ALCLSACT=1)
- (7) Reported experiencing two or more alcohol withdrawal symptoms at the same time that lasted longer than a day after alcohol use was cut back or stopped. Symptoms include (i) sweating or feeling that heart was beating fast, (ii) having hands tremble, (iii) having trouble sleeping, (iv) vomiting or feeling nauseous, (v) seeing, hearing, or feeling things that were not really there, (vi) feeling like could not sit still, (vii) feeling anxious, and (viii) having seizures or fits. (ALCWDSMT=1).

Note: A respondent could answer the dependence questions if he or she reported using alcohol in the past year, even if he or she did not report a valid response to the frequency of days in which he or she drank an alcoholic beverage. Thus, cases may exist where a respondent was classified as dependent on alcohol but drank an alcoholic beverage less than 6 days in the past year according to the imputed frequency of use variable (IRALCFY).

COCAINE:

To be defined with cocaine dependence, DEPNDCOC, a respondent must have met three or more of these cocaine dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of cocaine (COCLLOTTM=1 or COCGTOVR=1)
- (2) Used cocaine more often than intended or was unable to keep set limits on cocaine use (COCKPLMT=2)
- (3) Needed to use cocaine more than before to get desired effects or noticed that same amount of cocaine use had less effect than before (COCNDMOR=1 or COCLSEFX=1)
- (4) Inability to cut down or stop using cocaine every time tried or wanted to (COCCUTEV=2)
- (5) Continued to use cocaine even though it was causing problems with emotions, nerves, mental health, or physical problems (COCEMCTD=1 or COCPHCTD=1)
- (6) Cocaine use reduced or eliminated involvement or participation in important activities (COCLSACT=1)

- (7) Reported feeling blue or down when trying to stop or cut down using cocaine (COCFLBLU=1) as well as experiencing two or more additional cocaine withdrawal symptoms at the same time that lasted longer than a day after cocaine use was cut back or stopped. Symptoms include (i) feeling tired or exhausted, (ii) having bad dreams, (iii) having trouble sleeping or sleeping more than normal, (iv) feeling hungry more often, and (v) feeling either very slowed down or could not sit still. (COCWDSMT=1).

Note: A respondent could answer the dependence questions if he or she reported injecting cocaine with a needle in the past year, even if he or she reported not using cocaine in the past year. Thus, cases may exist where a respondent was classified as being dependent on cocaine, even though he or she had not used cocaine in the past year according to the imputed recency variable (COCYR).

HEROIN:

To be defined with heroin dependence, DEPNDHER, a respondent must have met three or more of these heroin dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of heroin (HERLOTTM=1 or HERGTOVR=1)
- (2) Used heroin more often than intended or was unable to keep set limits on heroin use (HERKPLMT=2)
- (3) Needed to use heroin more than before to get desired effects or noticed that same amount of heroin use had less effect than before (HERNDMOR=1 or HERLSEFX=1)
- (4) Inability to cut down or stop using heroin every time tried or wanted to (HERCUTEV=2)
- (5) Continued to use heroin even though it was causing problems with emotions, nerves, mental health, or physical problems (HEREMCTD=1 or HERPHCTD=1)
- (6) Heroin use reduced or eliminated involvement or participation in important activities (HERLSACT=1)
- (7) Reported experiencing three or more heroin withdrawal symptoms at the same time that lasted longer than a day after heroin use was cut back or stopped. Symptoms include (i) feeling kind of blue or down, (ii) vomiting or feeling nauseous, (iii) having cramps or muscle aches, (iv) having teary eyes or a runny nose, (v) feeling sweaty, having enlarged eye pupils, or having body hair standing up on skin, (vi) having diarrhea, (vii) yawning, (viii) having a fever, and (ix) having trouble sleeping. (HERWDSMT=1).

Note: A respondent could answer the dependence questions if he or she reported injecting with a needle, smoking, sniffing, or snorting heroin in the past year in the noncore module, even if he or she reported not using heroin in the past year in the core module. Thus, cases may exist where a respondent was classified as dependent on heroin, even though he or she had not used heroin in the past year according to the imputed recency variable (HERYR).

PAIN RELIEVERS:

To be defined with pain reliever dependence, DEPNDANL, a respondent must have met three or more of these pain reliever dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of pain relievers (ANLLOTTM=1 or ANLGTOVR=1)
- (2) Used pain relievers more often than intended or was unable to keep set limits on pain reliever use (ANLKPLMT=2)
- (3) Needed to use pain relievers more than before to get desired effects or noticed that same amount of pain reliever use had less effect than before (ANLNDMOR=1 or ANLLSEFX=1)
- (4) Inability to cut down or stop using pain relievers every time tried or wanted to (ANLCUTEV=2)
- (5) Continued to use pain relievers even though they were causing problems with emotions, nerves, mental health, or physical problems (ANLEMCTD=1 or ANLPHCTD=1)
- (6) Pain reliever use reduced or eliminated involvement or participation in important activities (ANLLSACT=1)
- (7) Reported experiencing three or more pain reliever withdrawal symptoms at the same time that lasted longer than a day after pain reliever use was cut back or stopped. Symptoms include (i) feeling kind of blue or down, (ii) vomiting or feeling nauseous, (iii) having cramps or muscle aches, (iv) having teary eyes or a runny nose, (v) feeling sweaty, having enlarged pupils, or having body hair standing up on skin, (vi) having diarrhea, (vii) yawning, (viii) having a fever, and (ix) having trouble sleeping. (ANLWDSMT=1).

SEDATIVES:

To be defined with sedative dependence, DEPNDSED, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2007 (SEDDAFLG=98) and must have met three or more of these sedative dependence criteria (i.e., respondents who indicated sedative use based only on responses from the questions in the noncore special drugs module added to the skip logic in 2008 were defined as NOT having past year sedative dependence):

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of sedatives (SEDLOTTM=1 or SEDGTOVR=1)
- (2) Used sedatives more often than intended or was unable to keep set limits on sedative use (SEDKPLMT=2)
- (3) Needed to use sedatives more than before to get desired effects or noticed that same amount of sedative use had less effect than before (SEDNDMOR=1 or SEDLSEFX=1)
- (4) Inability to cut down or stop using sedatives every time tried or wanted to (SEDCUTEV=2)
- (5) Continued to use sedatives even though they were causing problems with emotions, nerves, mental health, or physical problems (SEDEMCTD=1 or SEDPHCTD=1)
- (6) Sedative use reduced or eliminated involvement or participation in important activities (SEDLSACT=1)
- (7) Reported experiencing one or more sedative withdrawal symptoms at the same time that lasted longer than a day after sedative use was cut back or stopped. Symptoms include (i) sweating or feeling that heart was beating fast, (ii) having hands tremble, (iii) having trouble sleeping or sleeping more than normal, (iv) vomiting or feeling nauseous, (v) seeing, hearing, or feeling things that were not really there, (vi) feeling like could not sit still, (vii) feeling anxious, and (viii) having seizures or fits. (SEDWDSMT=1).

STIMULANTS:

To be defined with stimulant dependence, DEPNDSTM, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2004 (STMDAFLG=98) and must have met three or more of these stimulant dependence criteria (i.e., respondents who did not indicate methamphetamine use or other stimulant use from the core drug module or questions in the noncore special drugs module [other than the questions added in 2005, 2006, and 2008 as mentioned above] and who met three or more of these stimulant dependence criteria were categorized as NOT having past year stimulant dependence):

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of stimulants (STMLOTTM=1 or STMGTOVR=1)
- (2) Used stimulants more often than intended or was unable to keep set limits on stimulant use (STMKPLMT=2)
- (3) Needed to use stimulants more than before to get desired effects or noticed that same amount of stimulant use had less effect than before (STMNDMOR=1 or STMLSEFX=1)
- (4) Inability to cut down or stop using stimulants every time tried or wanted to (STMCUTEV=2)
- (5) Continued to use stimulants even though they were causing problems with emotions, nerves, mental health, or physical problems (STMEMCTD=1 or STMPHCTD=1)
- (6) Stimulant use reduced or eliminated involvement or participation in important activities (STMLSACT=1)
- (7) Reported feeling blue or down when trying to stop or cut down using stimulants (STMFLBLU=1) as well as experiencing two or more additional stimulant withdrawal symptoms at the same time that lasted longer than a day after stimulant use was cut back or stopped. Symptoms include (i) feeling tired or exhausted, (ii) having bad dreams, (iii) having trouble sleeping or sleeping more than normal, (iv) feeling hungry more often, and (v) feeling either very slowed down or like could not sit still. (STMWDSMT=1).

Note: A respondent could answer the dependence questions if he or she reported injecting stimulants (including methamphetamine) with a needle in the past year in the noncore module, even if he or she reported not using stimulants in the past year in the core module. Thus, cases may exist where a respondent was classified as being dependent on stimulants, even though he or she had not used stimulants in the past year according to the imputed recency variable (CPNSTMYR).

Substance Dependence Recodes Defined without Withdrawal Criteria

HALLUCINOGENS:

To be defined with hallucinogen dependence, DEPNDHAL, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2007 (HALDAFLG=98) and must have met three or more of these hallucinogen dependence criteria (i.e., respondents who indicated hallucinogen use based only on responses from the questions in the noncore special drugs module added to the skip logic in 2008 were defined as NOT having past year hallucinogen dependence):

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of hallucinogens (HALLOTTM=1 or HALGTOVR=1)
- (2) Used hallucinogens more often than intended or was unable to keep set limits on hallucinogen use (HALKPLMT=2)
- (3) Needed to use hallucinogens more than before to get desired effects or noticed that same amount of hallucinogen use had less effect than before (HALNDMOR=1 or HALLSEFX=1)
- (4) Inability to cut down or stop using hallucinogens every time tried or wanted to (HALCUTEV=2)
- (5) Continued to use hallucinogens even though they were causing problems with emotions, nerves, mental health, or physical problems (HALEMCTD=1 or HALPHCTD=1)
- (6) Hallucinogen use reduced or eliminated involvement or participation in important activities (HALLSACT=1).

INHALANTS:

To be defined with inhalant dependence, DEPNDINH, a respondent must have met three or more of these inhalant dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of inhalants (INHLOTTM=1 or INHGTOVR=1)
- (2) Used inhalants more often than intended or was unable to keep set limits on inhalant use (INHKPLMT=2)
- (3) Needed to use inhalants more than before to get desired effects or noticed that same amount of inhalant use had less effect than before (INHNDMOR=1 or INHLSEFX=1)
- (4) Inability to cut down or stop using inhalants every time tried or wanted to (INHCUTEV=2)
- (5) Continued to use inhalants even though they were causing problems with emotions, nerves, mental health, or physical problems (INHEMCTD=1 or INHPHCTD=1)
- (6) Inhalant use reduced or eliminated involvement or participation in important activities (INHLSACT=1).

MARIJUANA:

To be defined with marijuana dependence, DEPNDMRJ, a respondent must have met three or more of these marijuana dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of marijuana (MRJLOTTM=1 or MRJGTOVR=1)

- (2) Used marijuana more often than intended or was unable to keep set limits on marijuana use (MRJKPLMT=2)
- (3) Needed to use marijuana more than before to get desired effects or noticed that same amount of marijuana use had less effect than before (MRJNDMOR=1 or MRJLSEFX=1)
- (4) Inability to cut down or stop using marijuana every time tried or wanted to (MRJCUTEV=2)
- (5) Continued to use marijuana even though it was causing problems with emotions, nerves, mental health, or physical problems (MRJEMCTD=1 or MRJPHCTD=1)
- (6) Marijuana use reduced or eliminated involvement or participation in important activities (MRJLSACT=1).

Note: A respondent could answer the dependence questions if he or she reported using marijuana in the past year, even if he or she did not report a valid response to the frequency of days in which he or she used marijuana. Thus, cases may exist where a respondent was classified as dependent on marijuana but used marijuana less than 6 days in the past year according to the imputed frequency of use variable (IRMJFY).

TRANQUILIZERS:

To be defined with tranquilizer dependence, DEPNDTRN, a respondent must have met three or more of these tranquilizer dependence criteria:

- (1) Spent a great deal of time over a period of a month or more getting, using, or getting over the effects of tranquilizers (TRNLOTTM=1 or TRNGTOVR=1)
- (2) Used tranquilizers more often than intended or was unable to keep set limits on tranquilizer use (TRNKPLMT=2)
- (3) Needed to use tranquilizers more than before to get desired effects or noticed that same amount of tranquilizer use had less effect than before (TRNNNDMOR=1 or TRNLSEFX=1)
- (4) Inability to cut down or stop using tranquilizers every time tried or wanted to (TRNCUTEV=2)
- (5) Continued to use tranquilizers even though they were causing problems with emotions, nerves, mental health, or physical problems (TRNEMCTD=1 or TRNPHTCD=1)
- (6) Tranquilizer use reduced or eliminated involvement or participation in important activities (TRNLSACT=1).

Substance Abuse Recodes

ALCOHOL:

To be defined with abuse of alcohol, ABUSEALC, a respondent must have met one or more of these alcohol abuse criteria in the past year and must not have been dependent upon alcohol in the past year (DEPNDALC=0):

- (1) Serious problems at home, work, or school caused by using alcohol, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(ALCSERPB=1)
- (2) Used alcohol regularly and then did something that might have put you in physical danger (ALCPDANG=1)
- (3) Use of alcohol caused you to do things that repeatedly got you in trouble with the law (ALCLAWTR=1)
- (4) Problems with family or friends that were probably caused by using alcohol (ALCFMFPB=1) and continued to use alcohol even though you thought using alcohol caused these problems (ALCFMCTD=1).

Note: A respondent could answer the abuse questions if he or she reported using alcohol in the past year, even if he or she did not report a valid response to the frequency of days in which he or she drank an alcoholic beverage. Thus, cases may exist where a respondent was classified to have abused alcohol but drank an alcoholic beverage less than 6 days in the past year according to the imputed frequency of use variable (IRALCFY).

COCAINE:

To be defined with abuse of cocaine, ABUSECOC, a respondent must have met one or more of these cocaine abuse criteria in the past year and must not have been dependent upon cocaine in the past year (DEPNDCC=0):

- (1) Serious problems at home, work, or school caused by using cocaine, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(COCSERPB=1)
- (2) Used cocaine regularly and then did something that might have put you in physical danger (COCPDANG=1)
- (3) Use of cocaine caused you to do things that repeatedly got you in trouble with the law (COCLAWTR=1)
- (4) Problems with family or friends probably caused by using cocaine (COCFMFPB=1) and continued to use cocaine even though you thought using cocaine caused these problems (COCFMCTD=1).

Note: A respondent could answer the abuse questions if he or she reported injecting cocaine with a needle in the past year, even if he or she reported not using cocaine in the past year. Thus, cases may exist where a respondent was classified to have abused cocaine,

even though he or she had not used cocaine in the past year according to the imputed recency variable (COCYR).

HALLUCINOGENS:

To be defined with abuse of hallucinogens, ABUSEHAL, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2007 (HALDAFLG=98), must have met one or more of these hallucinogen abuse criteria in the past year (i.e., respondents who indicated hallucinogen use based only on responses from the questions in the noncore special drugs module added to the skip logic in 2008 were categorized as NOT having abused hallucinogens in the past year), and must not have been dependent upon hallucinogens in the past year (DEPNDHAL=0):

- (1) Serious problems at home, work, or school caused by using hallucinogens, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(HALSERPB=1)
- (2) Used hallucinogens regularly and then did something that might have put you in physical danger (HALPDANG=1)
- (3) Use of hallucinogens caused you to do things that repeatedly got you in trouble with the law (HALLAWTR=1)
- (4) Problems with family or friends probably caused by using hallucinogens (HALFMFPB=1) and continued to use hallucinogens even though you thought using hallucinogens caused these problems (HALFMCTD=1).

HEROIN:

To be defined with abuse of heroin, ABUSEHER, a respondent must have met one or more of these heroin abuse criteria in the past year and must not have been dependent upon heroin in the past year (DEPNDHER=0):

- (1) Serious problems at home, work, or school caused by using heroin, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(HERSERPB=1)
- (2) Used heroin regularly and then did something that might have put you in physical danger (HERPDANG=1)
- (3) Use of heroin caused you to do things that repeatedly got you in trouble with the law (HERLAWTR=1)
- (4) Problems with family or friends probably caused by using heroin (HERFMFPB=1) and continued to use heroin even though you thought using heroin caused these problems (HERFMCTD=1).

Note: A respondent could answer the abuse questions if he or she reported injecting with a needle, smoking, sniffing, or snorting heroin in the past year in the noncore module, even if he or she reported not using heroin in the past year in the core module. Thus, cases may exist where a respondent was classified to have abused heroin, even though he or she had not used heroin in the past year according to the imputed recency variable (HERYR).

INHALANTS:

To be defined with abuse of inhalants, ABUSEINH, a respondent must have met one or more of these inhalant abuse criteria in the past year and must not have been dependent upon inhalants in the past year (DEPNDINH=0):

- (1) Serious problems at home, work, or school caused by using inhalants, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(INHSERPB=1)
- (2) Used inhalants regularly and then did something that might have put you in physical danger (INHPDANG=1)
- (3) Use of inhalants caused you to do things that repeatedly got you in trouble with the law (INHLAWTR=1)
- (4) Problems with family or friends probably caused by using inhalants (INHFMFPB=1) and continued to use inhalants even though you thought using inhalants caused these problems (INHFMCTD=1).

MARIJUANA:

To be defined with abuse of marijuana, ABUSEMRJ, a respondent must have met one or more of these marijuana abuse criteria in the past year and must not have been dependent upon marijuana in the past year (DEPNDMRJ=0):

- (1) Serious problems at home, work, or school caused by using marijuana, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school(MRJSERPB=1)
- (2) Used marijuana regularly and then did something that might have put you in physical danger (MRJPDANG=1)
- (3) Use of marijuana caused you to do things that repeatedly got you in trouble with the law (MRJLAWTR=1)
- (4) Problems with family or friends probably caused by using marijuana (MRJFMFPB=1) and continued to use marijuana even though you thought using marijuana caused these problems (MRJFMCTD=1).

Note: A respondent could answer the abuse questions if he or she reported using marijuana in the past year, even if he or she did not report a valid response to the frequency of days in which he or she used marijuana. Thus, cases may exist where a respondent was classified to have abused marijuana but used marijuana less than 6 days in the past year according to the imputed frequency of use variable (IRMJFY).

PAIN RELIEVERS:

To be defined with abuse of pain relievers, ABUSEANL, a respondent must have met one or more of these pain reliever abuse criteria in the past year and must not have been dependent upon pain relievers in the past year (DEPNDANL=0):

- (1) Serious problems at home, work, or school caused by using pain relievers, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school
 (ANLSERPB=1)
- (2) Used pain relievers regularly and then did something that might have put you in physical danger (ANLPDANG=1)
- (3) Use of pain relievers caused you to do things that repeatedly got you in trouble with the law (ANLLAWTR=1)
- (4) Problems with family or friends probably caused by using pain relievers (ANLFMFPB=1) and continued to use pain relievers even though you thought using pain relievers caused these problems (ANLFMCTD=1).

SEDATIVES:

To be defined with abuse of sedatives, ABUSESED, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2007 (SEDDAFLG=98), must have met one or more of these sedative abuse criteria in the past year (i.e., respondents who indicated sedative use based only on responses from the questions in the noncore special drugs module added to the skip logic in 2008 were categorized as NOT having abused sedatives in the past year), and must not have been dependent upon sedatives in the past year (DEPNDSED=0):

- (1) Serious problems at home, work, or school caused by using sedatives, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school
 (SEDSERPB=1)
- (2) Used sedatives regularly and then did something that might have put you in physical danger (SEDPDANG=1)
- (3) Use of sedatives caused you to do things that repeatedly got you in trouble with the law (SEDLAWTR=1)
- (4) Problems with family or friends probably caused by using sedatives (SEDFMFPB=1) and continued to use sedatives even though you thought using sedatives caused these problems (SEDFMCTD=1).

STIMULANTS:

To be defined with abuse of stimulants, ABUSESTM, a respondent must have been routed to the dependence and abuse questions in 2014 based on variables in the skip logic that existed in 2004 (STMDAFLG=98), must have met one or more of these stimulant abuse criteria in the past year (i.e., respondents who did not indicate methamphetamine use or other stimulant use from the core drug module or questions in the noncore special drugs module [other than the questions added in 2005, 2006, and 2008 as mentioned above] and who met one or more of these stimulant abuse criteria were categorized as NOT having abused stimulants in the past year), and must not have been dependent upon stimulants in the past year (DEPNDSTM=0):

- (1) Serious problems at home, work, or school caused by using stimulants, such as
 - neglecting their children
 - missing work or school

- doing a poor job at work or school
- losing a job or dropping out of school
(STMSERPB=1)
- (2) Used stimulants regularly and then did something that might have put you in physical danger (STMPDANG=1)
- (3) Use of stimulants caused you to do things that repeatedly got you in trouble with the law (STMLAWTR=1)
- (4) Problems with family or friends probably caused by using stimulants
(STMFMFNB=1) and continued to use stimulants even though you thought that using stimulants caused these problems (STMFMCND=1).

Note: A respondent could answer the abuse questions if he or she reported injecting stimulants (including methamphetamine) with a needle in the past year in the noncore module, even if he or she reported not using stimulants in the past year in the core module. Thus, cases may exist where a respondent was classified to have abused stimulants, even though he or she had not used stimulants in the past year according to the imputed recency variable (CPNSTMYR).

TRANQUILIZERS:

To be defined with abuse of tranquilizers, ABUSETRN, a respondent must have met one or more of these tranquilizer abuse criteria in the past year and must not have been dependent upon tranquilizers in the past year (DEPNDTRN=0):

- (1) Serious problems at home, work, or school caused by using tranquilizers, such as
 - neglecting their children
 - missing work or school
 - doing a poor job at work or school
 - losing a job or dropping out of school
(TRNSERPB=1)
- (2) Used tranquilizers regularly and then did something that might have put you in physical danger (TRNPDANG=1)
- (3) Use of tranquilizers caused you to do things that repeatedly got you in trouble with the law (TRNLAWTR=1)
- (4) Problems with family or friends probably caused by using tranquilizers
(TRNFMFNB=1) and continued to use tranquilizers even though you thought using tranquilizers caused these problems (TRNFMCND=1).

APPENDIX E

Recoded Mental Health Module Variable Documentation

The 2014 National Survey on Drug Use and Health (NSDUH) included a "mental health" module that was designed to provide data on various mental health measures for adults aged 18 or older, such as serious psychological distress (SPD), mental illness (i.e., any mental illness [AMI], serious mental illness [SMI], moderate mental illness [MMI], serious or moderate mental illness [SMMI], low [i.e., mild] mental illness [LMI], low or moderate mental illness [LMMI]), and suicidal ideation and behavior (i.e., thoughts, plans, and attempts).

Estimates of past year and past month SPD, past year mental illness, and past year suicidal ideation and behavior are presented in the 2014 mental health detailed tables (Center for Behavioral Health Statistics and Quality [CBHSQ], 2015e). Starting with the 2014 NSDUH, these measures, except SPD, also are presented in the behavioral health trends in the United States report (CBHSQ, 2015b), the suicidal thoughts and behavior among adults report (CBHSQ, 2015f), and the receipt of services for behavioral health problems report (CBHSQ, 2015c).¹ The tables on mental health are published separately² from the 2014 detailed tables (CBHSQ, 2015d).

Past year mental illness estimates for 2008 through 2011 found in tables and reports published prior to the 2012 NSDUH were based on a prediction model for mental illness developed using the 2008 data from the Mental Health Surveillance Study (MHSS) (referred to as the "2008 model"). This model was developed using approximately 750 cases obtained from a clinical follow-up study. Although the Substance Abuse and Mental Health Services Administration (SAMHSA) continued to obtain clinical interviews after 2008, estimates of SMI and AMI from the 2009, 2010, and 2011 NSDUHs were based on the model developed from the 2008 clinical assessment sample. The same model was applied to each year's NSDUH data to provide consistency in SMI and AMI comparisons across the years. Producing a new model each year based on the small annual clinical samples (only 500 interviews in 2009 and 2010) would have resulted in large changes in the model parameters and corresponding prevalence rates due to sampling error, making it impossible to detect real trends in SMI and AMI over time. Furthermore, an evaluation of the 2008 model, using the 2009 NSDUH clinical data, found that the model could not be significantly improved with the additional 500-case 2009 clinical sample. The clinical follow-up study, started in 2008, continued until 2012, leading to a nationally representative sample of approximately 5,000 cases that were used to develop an improved mental illness prediction model (referred to as the "2012 model"). This revised and improved model was used to predict mental illness starting with the 2012 NSDUH. Beginning with the 2012 mental health detailed tables, estimates, including those from 2008 through 2011, were all based on the revised model. The mental illness estimates in the 2008 detailed tables (Office of Applied Studies, 2009) and the 2009-2011 mental health detailed tables (CBHSQ, 2010a; 2012a; 2012b) were updated using the revised 2012 model. For more information on the MHSS and the mental illness indicators from 2008 through 2014, see the Development of Mental Illness Indicators section below.

This appendix provides details about the use of the psychological distress and functional impairment scales to measure mental illness and the development of the 2008-2014 mental illness indicators based on the aforementioned 2012 model. Additionally, this appendix provides

¹ These reports are considered first release reports and are replacing the national findings and mental health findings reports that were published in previous years.

² Separate tables and reports for mental health measures started with the 2009 NSDUH.

details about the 2008-2011 mental illness indicators based on the 2008 model. Information about the availability of the mental illness variables from the 2008 and 2012 models as well as guidance regarding analysis of these variables, including weighting information, is also provided in this appendix. Furthermore, Appendix I, Key Mental Health Variables, provides a table with the variable names for the most commonly used NSDUH mental health measures as well as information regarding comparability across survey years 2002 through 2014.

2014 NSDUH Scales Used To Measure Mental Illness

Psychological Distress Scale: K6

The K6 screening instrument for nonspecific psychological distress (Furukawa, Kessler, Slade, & Andrews, 2003; Kessler et al., 2003) included in the computer-assisted interviewing instrument was used to create both past month (SPDMON) and past year (SPDYR) SPD indicators.³ For both of the time periods, respondents were classified with SPD if a score based on these K6 measures was 13 or greater.

The two six-item K6 scales gather information regarding how frequently a respondent experienced symptoms of psychological distress during the past 30 days and during a month in the past 12 months when he or she felt more depressed, anxious, or emotionally stressed than in the past 30 days, respectively. Only respondents who indicated that there was a worse month than the past 30 days (DSTWORST=1) were asked about the worst month in the past year other than the past 30 days.

The questions comprising the two K6 scales and the screener question for the worst month scale are provided below with their associated edited variable names from the mental health module as well as the response categories for each question:

DSTNRV30 During the past 30 days, how often did you feel nervous?

- 1 All of the time
- 2 Most of the time
- 3 Some of the time
- 4 A little of the time
- 5 None of the time
- DK/REF

Response categories are the same for the remaining past month K6 questions:

DSTHOP30 During the past 30 days, how often did you feel hopeless?

DSTRST30 During the past 30 days, how often did you feel restless or fidgety?

³ Because of the addition of the 30-day K6 questions in the 2008 NSDUH, past year K6 and SPD variables in 2008 and subsequent years are not comparable with past year K6 and SPD variables from previous years and therefore have been renamed.

- DSTCHR30** During the past 30 days, how often did you feel so sad or depressed that nothing could cheer you up?
- DSTEFF30** During the past 30 days, how often did you feel that everything was an effort?
- DSTNGD30** During the past 30 days, how often did you feel down on yourself, no good, or worthless?
- DSTWORST** The last questions asked about how you have been feeling during the past 30 days. Now think about **the past 12 months**. Was there a month in the past 12 months when you felt more depressed, anxious, or emotionally stressed than you felt during the past 30 days?
- 1 Yes
2 No
- DSTNRV12** Think of one month in the past 12 months when you were the most depressed, anxious, or emotionally stressed.
- During that month, how often did you feel nervous?
- 1 All of the time
2 Most of the time
3 Some of the time
4 A little of the time
5 None of the time
DK/REF

Response categories are the same for the remaining worst month K6 questions:

- DSTHOP12** During that same month when you were at your worst emotionally . . . how often did you feel hopeless?
- DSTRST12** During that same month when you were at your worst emotionally . . . how often did you feel restless or fidgety?
- DSTCHR12** During that same month when you were at your worst emotionally . . . how often did you feel so sad or depressed that nothing could cheer you up?
- DSTEFF12** During that same month when you were at your worst emotionally . . . how often did you feel that everything was an effort?
- DSTNGD12** During that same month when you were at your worst emotionally . . . how often did you feel down on yourself, no good, or worthless?

Each K6 scale item shown above was transformed so that "All of the time" was coded 4, "Most of the time" was coded 3, "Some of the time" was coded 2, "A little of the time" was coded 1, and "None of the time" was coded 0, along with responses matching "Don't know," refusals, bad data, blanks, and legitimate skips.

A past month distress score (K6SCMON) was calculated by summing these transformed values across the six past 30-day variables (DSTNRV30, DSTHOP30, DSTRST30, DSTCHR30, DSTEFF30, and DSTNGD30) to arrive at a value ranging between 0 and 24. Likewise, a worst month in the past year distress score (K6SCYR) was calculated by summing the transformed values across the six worst month in the past year variables (DSTNRV12, DSTHOP12, DSTRST12, DSTCHR12, DSTEFF12, and DSTNGD12) to arrive at a value ranging between 0 and 24. The worst month in the past year distress score (K6SCYR) has values only for adult respondents who indicated that there was a month in the past year that was worse than the past 30 days (DSTWORST=1). A worst total score (K6SCMAX) was then created that takes on the maximum value of the past month distress score (K6SCMON) and the worst month in the past year distress score (K6SCYR) in order to represent the worst distress score during the past year, regardless of whether this contradicts the response to DSTWORST. For all the K6 score and SPD variables, youths aged 12 to 17 were assigned the standard SAS missing code (.) because the mental health module was not administered to youths.

An alternative worst month in the past year total score variable (WSPDSC2) was created to indicate the worst distress score during the past year. Using the worst month total score (K6SCMAX), the alternative worst month total score (WSPDSC2) is coded 0 when K6SCMAX has a value from 0 to 7, and WSPDSC2 is assigned a value of 1 to 17 when K6SCMAX has a corresponding value of 8 to 24. This variable was not used in the creation of past month and past year SPD variables but was used in both the 2008 and 2012 models to create the mental illness variables discussed later in this document. The decision to create a recoded version of the past month K6 score was based on an analysis of the 2008 MHSS. Specifically, the alternative past year K6 score (WSPDSC2) was used in the models because the SMI prevalence was typically extremely low for respondents with worst month in the past year K6 scores of less than 8, and the prevalence rates started increasing only once scores were 8 or greater. For more details about how this recoded score was created as well as more details on the original score, see Aldworth et al. (2009).

Using the past month distress score defined above, adults aged 18 or older are classified as having past month SPD (SPDMON=1) if their distress score is 13 or greater ($K6SCMON \geq 13$), and they are classified as not having past month SPD (SPDMON=0) if their distress score is less than 13 ($K6SCMON < 13$). This cutoff point was chosen because it has been shown to be highly correlated with SMI (Colpe, Epstein, Barker, & Gfroerer, 2009) and is the standard cutoff point used by other surveys. Likewise, past year SPD (SPDYR) is defined the same way as past month SPD by using the total past year score (K6SCMAX) and the same cutoff value of 13.

The use of the two reference periods to create the total past year score (K6SCMAX) that defines past year SPD (SPDYR) started with the 2008 NSDUH. From 2005 to 2007, respondents were asked only about distress in the month when they were the most depressed, anxious, or emotionally distressed in the past year. Because of this change, past year K6 and SPD estimates

from years prior to 2008 were no longer comparable with estimates from 2008 onward. To address this comparability issue, an adjusted version of the worst total K6 score (K6SMXADJ) and past year SPD (SPDYRADJ) variables were created retroactively for survey years 2005 through 2007. These variables were statistically adjusted to make the 2005-2007 K6 and SPD estimates comparable with the 2008 and subsequent K6 and SPD estimates. The 2005-2007 adjusted variables (K6SMXADJ and SPDYRADJ) can be renamed for use in analyses to match the 2008 and subsequent variable names (K6SCMAX and SPDYR) to produce comparable estimates across all years (2005 and subsequent years), as seen in the 2014 mental health detailed tables (CBHSQ, 2015e). More information about how the statistically adjusted K6 and SPD variables were created can be found in the 2005-2007 codebooks and in the report describing these adjustments (Aldworth, Kott, Yu, Mosquin, & Barnett-Walker, 2012).

Functional Impairment Scale: WHODAS

The World Health Organization Disability Assessment Schedule (WHODAS) is a scale used to measure functional impairment that consists of a series of items that are used for assessing disturbances in social adjustment and behavior (i.e., functional impairment). A reduced set of 13 WHODAS items (Novak, Colpe, Barker, & Gfroerer, 2010; Rehm et al., 1999) are included in the NSDUH. Responses to this impairment scale were used to create eight variables that were transformed and summed to define the WHODAS total score used in the development of both the 2008 and 2012 SMI prediction models. The questions comprising the abbreviated WHODAS are provided below, with their associated edited variable names from the mental health module as well as the response categories for each question:

The next questions are about how much your emotions, nerves, or mental health caused you to have **difficulties in daily activities**.

In answering, think of the **one month** in the past 12 months when your emotions, nerves, or mental health interfered **most** with your daily activities.

IMPREMEM During that one month when your emotions, nerves or mental health interfered **most** with your daily activities . . .

how much difficulty did you have **remembering to do things you needed to do?**

- 1 No difficulty
 - 2 Mild difficulty
 - 3 Moderate difficulty
 - 4 Severe difficulty
- DK/REF

IMPCONCN how much difficulty did you have **concentrating on doing something important when other things were going on around you?**

- 1 No difficulty
- 2 Mild difficulty

- 3 Moderate difficulty
- 4 Severe difficulty
- DK/REF

IMPGOUT how much difficulty did you have **going out of the house and getting around on your own?**

- 1 No difficulty
- 2 Mild difficulty
- 3 Moderate difficulty
- 4 Severe difficulty
- 5 You didn't leave the house on your own

DK/REF

IMPGOUTM [IF IMPGOUT = 5] Did problems with your emotions, nerves, or mental health keep you from leaving the house on your own?

- 1 Yes
- 2 No

DK/REF

IMPPEOP how much difficulty did you have **dealing with people you did not know well?**

- 1 No difficulty
- 2 Mild difficulty
- 3 Moderate difficulty
- 4 Severe difficulty
- 5 You didn't deal with people you did not know well

DK/REF

IMPPEOPM [IF IMPPEOP = 5] Did problems with your emotions, nerves, or mental health keep you from dealing with people you did not know well?

- 1 Yes
- 2 No

DK/REF

IMPSOC how much difficulty did you have **participating in social activities, like visiting friends or going to parties?**

- 1 No difficulty
- 2 Mild difficulty
- 3 Moderate difficulty

- 4 Severe difficulty
 - 5 You didn't participate in social activities
- DK/REF

IMPSOCM [IF IMPSOC=5] Did problems with your emotions, nerves, or mental health keep you from participating in social activities?

- 1 Yes
 - 2 No
- DK/REF

IMPHHLD how much difficulty did you have **taking care of household responsibilities?**

- 1 No difficulty
 - 2 Mild difficulty
 - 3 Moderate difficulty
 - 4 Severe difficulty
 - 5 You didn't take care of household responsibilities
- DK/REF

IMPHHLDM [IF IMPHHLD=5] Did problems with your emotions, nerves, or mental health keep you from taking care of household responsibilities?

- 1 Yes
 - 2 No
- DK/REF

IMPRESP how much difficulty did you have **taking care of your daily responsibilities at work or school?**

- 1 No difficulty
 - 2 Mild difficulty
 - 3 Moderate difficulty
 - 4 Severe difficulty
 - 5 You didn't work or go to school
- DK/REF

IMPRESPM [IF IMPRESP=5] Did problems with your emotions, nerves, or mental health keep you from working or going to school?

- 1 Yes
 - 2 No
- DK/REF

IMPWORK [IF IMPRESP NE 5] During that one month when your emotions, nerves or mental health interfered **most** with your daily activities . . .

how much difficulty did you have **getting your daily work done as quickly as needed?**

- 1 No difficulty
- 2 Mild difficulty
- 3 Moderate difficulty
- 4 Severe difficulty
- DK/REF

An original WHODAS total score (WHODASC2) was created to indicate the level of difficulty in performing daily activities due to problems with emotions, nerves, or mental health. Each of the eight variables created from the WHODAS items shown above was transformed into values of 0 to 3 so that a response of "Severe difficulty" was coded 3, "Moderate difficulty" was coded 2, and "Mild difficulty" was coded 1. Values of "No difficulty" were coded 0, along with nonresponses (i.e., for responses of "No," "Don't know," or "Refused"). Some items had a fifth category to deal with "Not applicable" responses. For example, the question about difficulties regarding taking care of daily responsibilities at work or school (IMPRESP) had a fifth category, "You didn't work or go to school." If this category was selected, then another question was asked as to whether respondents' emotions, nerves, or mental health caused them to be unable to work or go to school (IMPRESPM). A "Yes" response to the follow-up question (IMPRESPM=1) was coded 3 and a "No" response (IMPRESPM=2) was coded 0. One exception to this coding was the last WHODAS recode on how much difficulty the respondents had in getting their daily work done as quickly as needed (IMPWORK). This item was asked of the respondents only if in the previous question they responded that they worked or went to school (IMPRESP=1 to 4). In the case that they responded that they did not work or go to school (IMPRESP=5), their response to the follow-up question referred to above (IMPRESPM) determined the final item score for IMPWORK; otherwise, IMPWORK was recoded similar to the other items.

The transformed scale values were summed across the eight variables created from the WHODAS items (remembering, concentrating, going out of the house on your own, dealing with people you don't know well, participating in social activities, taking care of household responsibilities, taking care of daily work/school responsibilities, and getting your daily work done as quickly as needed) to arrive at a value ranging between 0 and 24. For both the WHODAS total scores, youths aged 12 to 17 were assigned the standard SAS missing code (.) because the mental health module was not administered to youths.

An alternative WHODAS total score (WHODASC3) was created to indicate the number of daily activities in which a respondent had moderate or severe difficulty performing or did not perform due to problems with emotions, nerves, or mental health. Each of the eight variables created from WHODAS items shown above was transformed into values of 0 or 1 so that responses indicating "Moderate difficulty" or "Severe difficulty" were coded 1 and responses indicating "Mild difficulty" or "No difficulty" were coded 0. If a fifth category of "Not applicable" was available and selected (see above for an example of a fifth question), then another question was asked as to whether respondents' emotions, nerves, or mental health caused

them to be unable to work or go to school. A "Yes" response was coded 1 and a "No" response was coded 0. The transformed scale values were summed across the eight WHODAS activities to arrive at a value ranging between 0 and 8. This alternative WHODAS total score was used in both the 2008 and 2012 models estimating the mental illness variables. The decision to create a recoded version of the WHODAS total score was based on an analysis of the 2008 MHSS. Use of the recoded version of the WHODAS score (WHODASC3) in the models was driven by the realization that a dichotomous measure dividing severely impaired from less severely impaired respondents fit better than a linear continuous measure. For more details about how this alternative score was created as well as more details on the original score, see Aldworth et al. (2009).

Development of Mental Illness Indicators

The MHSS was initiated in 2008 with the primary goal of producing SMI estimates. Because of constraints on the interview time in the NSDUH and the need for trained mental health clinicians, it was not possible to administer a full structured diagnostic clinical interview to assess mental illness on all 45,000 adult respondents; therefore, the approach adopted by SAMHSA was to utilize short scales separately measuring psychological distress and functional impairment as described above that could be used in a statistical model to accurately predict whether a respondent had mental illness. Models that used these short scales to predict mental illness status have been developed using a subsample of NSDUH respondents who had completed the NSDUH interview and were administered a diagnostic interview (First, Spitzer, Gibbon, & Williams, 2002) via a clinical follow-up study.

In the 2008 NSDUH, the first year of the MHSS, approximately 1,500 NSDUH respondents participated in the clinical follow-up. Half of these respondents (approximately 750) were administered the WHODAS (discussed earlier in the text) and the other half were administered the Sheehan Disability Scale (SDS). This MHSS sample was used to develop a prediction model (the "2008 model") that was initially used to produce estimates of mental illness from the main NSDUH samples for the 2008-2011 NSDUHs. The purpose of the 2008 split sample was to determine whether the SDS or WHODAS impairment scale was a better predictor of SMI; therefore, for the 2008 NSDUH, two models were used to predict SMI: one for each impairment scale (WHODAS and SDS). The 2008 models for SMI were chosen so that the estimates from the WHODAS and the SDS samples were approximately equal, and hence published estimates of SMI were based on both WHODAS and SDS samples.⁴ The WHODAS model was determined to be the better predictor of SMI; therefore, starting with the 2009 NSDUH, only the WHODAS impairment scale was administered in the NSDUH and used for estimating all levels of mental illness (SMI, AMI, LMI, MMI, and SMMI). For further details, see Appendix B, Section B.4.3, in the 2009 mental health findings report (CBHSQ, 2010b).

In 2010, SAMHSA began preliminary investigations to assess whether improvements to the model were warranted using the MHSS clinical data collected since 2008. The 2011 and 2012 MHSS clinical samples were augmented to include 1,500 respondents per year, leading to a combined sample of approximately 5,000 clinical interviews for the MHSS from 2008 to 2012. It

⁴ For 2008, estimates of AMI, SMMI, LMI, and MMI were based only on the WHODAS half sample because notable differences were observed between the WHODAS and the SDS samples.

was recognized that altering the model for generating estimates would complicate the measurement of changes in SMI and other mental illness estimates across years. For example, if one model was used to produce estimates for the 2008-2011 NSDUH data and a different model was used for the 2012 NSDUH, then it would not be straightforward to determine whether changes in the prevalence of SMI could be attributed to a real underlying change in the population or to changes in the model. Similarly, if the 2012 NSDUH prevalence estimates were based on a new model and not significantly different from NSDUH estimates since 2008, it still could not be concluded that changing the model did not affect estimates. Rather, changes to the model used for the 2012 NSDUH could obscure actual changes in the population and lead to the erroneous conclusion of no changes in prevalence.

Despite these concerns, SAMHSA determined that the 2008 model had some important shortcomings that had not been detected in the original model fitting because of the small number of respondents in the 2008 MHSS. Specifically, the 2008 model substantially overestimated SMI and AMI among young adults relative to the clinical interview data. In addition, improvements were needed to the weighting procedures for the MHSS sample data to better account for nonresponse and undercoverage (i.e., because persons with mental illness appeared to be more likely to participate in the follow-up and because only NSDUH respondents who answered their surveys in English were eligible for the clinical follow-up). Therefore, SAMHSA decided to revise the model using the combined 2008-2012 clinical data (the "2012 model"). Consistent with the 2008 model, for the clinical interview respondents who had been administered the SDS in the 2008 NSDUH, an alternative 2012 SMI model was fit using the complete 2008-2012 MHSS data set (i.e., including both the WHODAS and SDS half samples in 2008). See CBHSQ (2014b) for more details on the 2008-2012 MHSS operations and data collections.

To reduce bias and improve prediction, a recoded age variable and additional mental health-related variables (i.e., serious thoughts of suicide in the past year and having a past year MDE) were added in the 2012 model. The addition of these mental health predictors in the model, however, impacts the types of analyses that can be performed with the mental illness variables derived from the model. See the Using Mental Illness Variables in Analysis section for more details. To eliminate coverage and nonresponse error, alternatives for the weights were applied to the clinical sample data for the model development. To provide consistent data for trend assessment, the mental illness estimates in the 2008 detailed tables (Office of Applied Studies, 2009) and the 2009-2011 mental health detailed tables (CBHSQ, 2010a; 2012a; 2012b) were recomputed using the new 2012 model. For more detailed information on the 2008 MHSS design and analysis, see Colpe et al. (2009), Colpe et al. (2010), and Aldworth et al. (2009). The remainder of this section summarizes the models and the methods that were used to compute estimates of mental illness from the main NSDUH sample.

SMI Prediction Model

Both the 2008 and 2012 models are prediction models for mental illness. Each prediction model is a weighted logistic regression. The response variable Y was defined so that $Y = 1$ when an SMI diagnosis was positive based on the clinical interview; otherwise, $Y = 0$. If \mathbf{x} is a vector of realized explanatory variables, then the response probability $\pi = \text{Pr}(Y = 1 | \mathbf{x})$ can be estimated using a weighted logistic regression model. Details about both the 2008 and 2012 prediction

models for SMI are included below. For further technical details on the 2012 prediction models as well as the impact of the revised model on the 2008-2011 estimates, see the 2012 MHSS design and estimation report (CBHSQ, 2014a).

2008 Model

The 2008 model was fit with 761 respondents from the 2008 MHSS, two of whom were subsequently identified as having data errors. The final WHODAS calibration model for the 2008 prediction model for SMI was determined as

$$\text{logit}(\hat{\pi}) \equiv \log[\hat{\pi}/(1-\hat{\pi})] = -4.74999920 + 0.20977232X_k + 0.38388395X_w,$$

where $\hat{\pi}$ refers to an estimate of the SMI response probability π , X_k represents WSPDSC2, and X_w represents WHODASC3.

Table 1 displays the WHODAS model specifications for the 2008 SMI prediction model.

Table 1. Final 2008 WHODAS SMI Prediction Model

| Final 2011 Model: WSPDSC2 + WHODASC3 | | | | | | |
|--------------------------------------|---------|---------|-------------|---------|----|--------------|
| Term | Beta | Beta SE | T-statistic | P-value | DF | Wald P-value |
| Intercept | -4.7500 | 0.3522 | -13.4854 | 0.0000 | | |
| WSPDSC2 | 0.2098 | 0.0765 | 2.7439 | 0.0072 | 1 | 0.0072 |
| WHODASC3 | 0.3839 | 0.1208 | 3.1768 | 0.0020 | 1 | 0.0020 |

DF = degrees of freedom, SE = standard error, SMI = serious mental illness, WHODAS = abbreviated eight-item World Health Organization Disability Assessment Schedule.

The formula for the predicted probability of SMI (SMIPP) using the model parameter estimates in Table 1 (but expressed with more decimal points) is as follows:

$$\text{SMIPP} = 1/(1 + \exp[-(-4.74999920 + 0.20977232*\text{WSPDSC2} + 0.38388395*\text{WHODASC3})]).$$

In the 2008 SMI prediction model, the respondent is classified as having past year SMI if SMIPP is greater than or equal to 0.269719459516744 (SMI cutoff point).

2012 Model

The 2012 SMI prediction model was fit with data from 4,912 WHODAS MHSS respondents from 2008 through 2012, excluding the one case from 2008 and the one case from 2009 that were dropped because of data errors. The final WHODAS calibration model for the 2012 prediction model for SMI was determined as

$$\text{logit}(\hat{\pi}) = \log[\hat{\pi} / (1-\hat{\pi})] = -5.972664 + 0.0873416X_k + 0.3385193X_w + 1.9552664X_s + 1.1267330X_m + 0.1059137X_a$$

In addition to X_k and X_w , this model includes the following from the main NSDUH interview data:

- $X_s = \text{Serious Thoughts of Suicide in the Past Year (MHSUTK_U)}$: Coded as 1 if "Yes"; coded as 0 otherwise.
- $X_m = \text{Past Year MDE (AMDEY2_U for WHODAS: AJAMDE_U for SDS)}$: Coded as 1 if the criteria for past year MDE (major depressive episode) were met;⁵ coded as 0 otherwise.
- $X_a = \text{Recoded Age (AGE1830)}$ ⁶: Coded as age minus 18 if aged 18 to 30; coded as 12 otherwise.

Table 2 displays the WHODAS model specifications for the 2012 SMI prediction model.

Table 2. Final 2012 WHODAS SMI Prediction Model

| Final 2012 Model: WSPDSC2 + WHODASC3 + MHSUTK_U + AMDEY2_U + AGE1830 | | | | | | |
|--|---------|---------|-------------|---------|----|--------------|
| Term | Beta | Beta SE | T-statistic | P-value | DF | Wald P-value |
| Intercept | -5.9727 | 0.3201 | -18.6586 | 0.0000 | | |
| WSPDSC2 | 0.0873 | 0.0248 | 3.5247 | 0.0009 | 1 | 0.0009 |
| WHODASC3 | 0.3385 | 0.0349 | 9.7034 | 0.0000 | 1 | 0.0000 |
| MHSUTK_U | 1.9553 | 0.2164 | 9.0342 | 0.0000 | 1 | 0.0000 |
| AMDEY2_U | 1.1267 | 0.2196 | 5.1308 | 0.0000 | 1 | 0.0000 |
| AGE1830 | 0.1059 | 0.0244 | 4.3380 | 0.0001 | 1 | 0.0001 |

DF = degrees of freedom, SE = standard error, SMI = serious mental illness, WHODAS = abbreviated eight-item World Health Organization Disability Assessment Schedule.

The formula for the predicted probability of SMI (SMIPP_U) using the model parameter estimates in Table 2 (but expressed with more decimal points) is as follows:

$$\text{SMIPP_U} = 1/(1 + \exp[-(-5.972664 + 0.0873416*\text{WSPDSC2} + 0.3385193*\text{WHODASC3} + 1.9552664*\text{MHSUTK_U} + 1.1267330*\text{AMDEY2_U} + 0.1059137*\text{AGE1830})]).$$

In the 2012 SMI WHODAS prediction model, the respondent is classified as having past year SMI if SMIPP_U is greater than or equal to 0.260573529 (SMI cutoff point).

Modified 2012 Model for the 2008 SDS Half Sample

As described in the Development of Mental Illness Indicators section above, the 2008 NSDUH data included a split sample. Similar to the 2008 model, the revised 2012 model also has an alternative model for the SDS data that was fit with data from the *complete* 2008-2012 MHSS clinical sample that contains 5,653 MHSS respondents, excluding four cases from 2008 (one from the WHODAS half sample and three from the SDS half sample) and one case from 2009 that were dropped because of data errors.

⁵ In this situation, the past year MDE measure is from the main NSDUH interview (i.e., not from the Structured Clinical Interview for DSM-IV). See Section B.4.5 of the 2014 NSDUH methodological summary and definitions (CBHSQ, 2015a).

⁶ The recoded age variable (AGE1830) is not included in the public use file.

The modified 2012 SMI prediction model for the SDS half sample was determined as

$$\text{logit}(\hat{\pi}) = \log[\hat{\pi} / (1 - \hat{\pi})] = -5.7736246 + 0.1772067 X_k + 1.8392433 X_s \\ + 1.6428623 X_m + 0.1231266 X_a$$

Table 3 displays the SDS half sample model specifications for the 2012 SMI prediction model.

Table 3. Final 2012 SDS Half Sample SMI Prediction Model

| Final 2012 Model: WSPDSC2 + MHSUTK_U + AJAMDE_U + AGE1830 | | | | | | |
|---|---------|---------|-------------|---------|----|--------------|
| Term | Beta | Beta SE | T-statistic | P-value | DF | Wald P-value |
| Intercept | -5.7736 | 0.3479 | -16.5960 | 0.0000 | | |
| WSPDSC2 | 0.1772 | 0.0190 | 9.3251 | 0.0000 | 1 | 0.0000 |
| MHSUTK_U | 1.8392 | 0.1941 | 9.4781 | 0.0000 | 1 | 0.0000 |
| AJAMDE_U | 1.6429 | 0.2119 | 7.7528 | 0.0000 | 1 | 0.0000 |
| AGE1830 | 0.1231 | 0.0259 | 4.7482 | 0.0000 | 1 | 0.0000 |

DF = degrees of freedom, SDS = Sheehan Disability Scale, SE = standard error, SMI = serious mental illness.

Although the model was fit across all years and the cutoff points were determined based on all years, these cutoff points were used only for the main survey respondents in the 2008 Sample B to predict SMI, AMI, and SMMI positives. The formula for the predicted probability of SMI (SMIPP_U) using the model parameter estimates in Table 3 (but expressed with more decimal points) is as follows:

$$\text{SMIPP_U} = 1/(1 + \exp[-(-5.7736246 + 0.1772067*\text{WSPDSC2} + 1.8392433*\text{MHSUTK_U} + 1.6428623*\text{AJAMDE_U} + 0.1231266*\text{AGE1830})]).$$

In the 2012 SMI SDS half sample prediction model, the respondent is classified as having past year SMI if SMIPP_U is greater than or equal to 0.236434 (SMI cutoff point).

Variables Available on the Data File

All of the variables defined above for the K6, SPD, and WHODAS are included on the 2014 data file. For the K6 and SPD, this includes the distress scores (K6SCMON and K6SCYR), both versions of the worst month K6 total score (WSPDSC2 and K6SCMAX), and past month and past year SPD (SPDMON and SPDYR). For the worst month K6 total score, the original version (K6SCMAX) is used in the creation of the SPD variables, and the alternative version (WSPDSC2) is used in the creation of the mental illness variables for both the 2008 and 2012 prediction models.

From the WHODAS, both versions of the WHODAS total score (WHODASC2 and WHODASC3) are included on the 2014 data file. While the original WHODAS total score (WHODASC2) was not used in either the 2008 or 2012 prediction model for the final creation of the mental illness variables, it is included in the data set.

Measures of mental illness were renamed due to the use of the 2012 model to define SMI. Measures of mental illness based on the 2012 prediction model are included on the 2014 data file.⁷ The variable names for these measures based on the 2012 model end with "_U" to indicate these variables are not comparable with similarly named variables (based on the "2008 model") in previous years. Table 4 displays a crosswalk between the 2008 model and revised 2012 model mental illness variable names.⁸ The mental illness variables based on the 2008 prediction model are no longer available on the data files for any of the survey years. While the specific mental illness measures based on the 2008 model are no longer available, the predicted probability of the SMI variable, SMIPP, remains available on the 2008-2011 files. For more information on how to use SMIPP from the 2008 model to create the mental illness measures and additional information on how to use the 2008 model measures, see Appendix B, Section B.4.3, in the 2009 mental health findings report (CBHSQ, 2010b). However, mental illness variables based on the 2008 model are no longer recommended for use in analysis.

Table 4. Mental Illness Variable Names, 2008 Model and Revised 2012 Model

| 2008 Model Variable Name | 2012 Model Variable Name | 2012 Model Labels |
|--------------------------|--------------------------|---|
| SMIYR | SMIYR_U | SMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB |
| SMIPP | SMIPP_U | PREDICTED SERIOUS MENTAL ILLNESS PROB REVISED |
| SMMIYR | SMMIYR_U | SMMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB |
| AMIYR | AMIYR_U | AMI IND (1/0) BASED ON REVISED PREDICTED SMI PROB |
| MMIYR | MMIYR_U | Moderate MI IND (1/0) BASED ON REVISED PRED SMI PROB |
| LMIYR | LMIYR_U | Mild MI IND (1/0) BASED ON REVISED PREDICTED SMI PROB |
| MI_CAT | MI_CAT_U | CATEGORICAL MI INDICATOR REVISED |
| AMIADPA2 | AMIDA2_U | AMI AND DRUG/ALCOHOL DEP OR ABUSE REVISED (1/2) |
| SMIADPA2 | SMIDA2_U | SMI AND DRUG/ALCOHOL DEP OR ABUSE REVISED (1/2) |

For all the mental illness measures defined below, youths aged 12 to 17 were defined as SAS missing (.) because the mental health module was not administered to youths. The predicted probability of SMI, SMIPP_U, based on the 2012 prediction model is included on the 2008-2014 data files and ranges in value from 0.0025409721 to 0.9291205406. Cutoff points along the range of SMIPP_U were used to determine the levels of mental illness for each respondent:

2008 Sample A (WHODAS) and 2009 to 2014

- SMI:⁹ If SMIPP_U is greater than or equal to 0.260573529, then the respondent is classified as having past year SMI (SMIYR_U=1).
- SMMI: If SMIPP_U is greater than or equal to 0.077686285365, then the respondent is classified as having past year SMMI (SMMIYR_U=1).

⁷ These variables are included on the 2012 data file, and data files from 2008 to 2011 were updated with the 2012 model-based mental illness variables.

⁸ A variable defined as low or moderate mental illness (LMMIYRU) based on the 2012 model was added during the 2014 NSDUH. LMMI was not added to this table because there is not a 2008 model equivalent variable.

⁹ SMI variables in 2008 and subsequent years are not comparable with similarly named SMI variables from 2002 to 2003.

- AMI: If SMIPP_U is greater than or equal to 0.0192519810, then the respondent is classified as having past year AMI (AMIYR_U=1).
- No Mental Illness: If SMIPP_U is less than 0.0192519810, then the respondent is classified as not having past year mental illness (AMIYR_U=0).

2008 Sample B (SDS)

- SMI: If SMIPP_U is greater than or equal to 0.236434, then the respondent is classified as having past year SMI (SMIYR_U=1).
- SMMI: If SMIPP_U is greater than or equal to 0.06616398, then the respondent is classified as having past year SMMI (SMMIYR_U=1).
- AMI: If SMIPP_U is greater than or equal to 0.019182625, then the respondent is classified as having past year AMI (AMIYR_U=1).
- No Mental Illness: If SMIPP_U is less than 0.019182625, then the respondent is classified as not having past year mental illness (AMIYR_U=0).

The categories of MMI and LMI were created by subtraction using a combination of the three defined levels of mental illness shown above. Respondents were defined as having past year MMI (MMIYR_U=1) if they were positive for SMMI (SMMIYR_U=1) but negative for SMI (SMIYR_U=0). Respondents were defined as having past year LMI (LMIYR_U=1) if they were positive for AMI (AMIYR_U=1) but negative for SMMI (SMMIYR_U=0). During the 2014 NSDUH, a new level of mental illness was created called low or moderate mental illness [LMMI]. Respondents were defined as having past year LMMI (LMMIYR_U=1) if they were positive for LMI (LMIYR_U=1) or MMI (MMIYR_U=1). LMMI was created for all years 2008 through 2012 and was used in the 2014 mental health detailed tables (CBHSQ, 2015e) showing estimates described as AMI excluding SMI. See the behavioral health trends in the United States report (CBHSQ, 2015b) and the receipt of services for behavioral health problems report (CBHSQ, 2015c).

The categories of SMI, LMI, and MMI were combined to create an overall mental illness indicator (MI_CAT_U), which is defined so that a respondent with LMI is coded 1, a respondent with MMI is coded 2, and a respondent with SMI is coded 3. Respondents with no past year mental illness are coded 0.

See Appendix I for a table listing key 2002-2014 NSDUH mental health measures, variable names, and information concerning comparability across survey years.

Using Mental Illness Variables in Analysis

For the 2008 NSDUH, while SMI data for both half samples (SDS and WHODAS) could be analyzed together when using the 2008 model, the AMI, SMMI, LMI, and MMI data from the two half samples could not be combined for analysis. Under the 2012 model, both the 2008 half samples can be combined for the analysis of SMI as well as the other levels of mental illness because the 2012 models were generated such that the estimates would be comparable.

The predicted mental illness variables (e.g., SMIYR_U, AMIYR_U) that were derived from the 2012 model were examined to determine how they were associated with the mental

health predictor variables in the 2012 model. It was found that the 2012 model significantly overestimated the proportion of adults aged 18 or older with SMI (and those with AMI) who had suicidal thoughts in the past year and also the proportion of adults who had MDE in the past year. Therefore, it is recommended that the mental illness variables derived from the 2012 model should not be used when analyzing past year suicidal thoughts, past year MDE, or other associated variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, or lifetime MDE). Similarly, it is recommended that model-based mental illness variables should not be used in conjunction with the K6 variables (including SPD) or WHODAS variables in any analyses. See the 2012 MHSS design and estimation report for more details (CBHSQ, 2014a).

Standard Errors (SEs) for Mental Illness Measures

SEs for SMI estimates (and, likewise, estimates for AMI, SMMI, MMI, LMI, and LMMI) were computed using the NSDUH predicted values as if they were actual values. This ignores the added error resulting from fitting the 2012 SMI model, which can be very large (CBHSQ, 2014a). These SEs, however, are more reasonable to use when making comparisons across years and across subpopulations within years because the errors due to model fitting are roughly the same across the estimates being compared. However, caution is advised when these mental illness measures are used as explanatory variables within a regression analysis because the resulting estimated regression coefficients often will be biased toward zero (Carroll, Ruppert, Stefanski, & Crainiceanu, 2006). Stated another way, values of the regression coefficients for these mental illness variables are likely to be attenuated. Consequently, situations in which AMI or specific levels of mental illness (e.g., SMI) are true predictors of a dependent variable of interest in the population may not be significant predictors in regression models that use these variables. If a statistically significant association is identified between these mental illness variables and the dependent variable, however, one can be more confident that this truly is a significant association.

Weights

Mental Illness Measures

Mental illness measures (i.e., SMI, AMI, SMMI, MMI, LMI, and LMMI) that are defined based on the 2012 model should be analyzed using the standard analysis weight, ANALWT_C, for all survey years 2008 through 2014. With the revised 2012 model, both the WHODAS and SDS 2008 half samples can be combined to form single estimates and use ANALWT_C.

This differs from the initial recommendation for analyzing other measures of mental illness besides SMI based on the 2008 model. Due to the 2008 split sample, an adjusted mental health sample weight, MHSAWT_C, was created so that the WHODAS and SDS half samples were separately representative of the civilian, noninstitutionalized population aged 18 or older. However, this weight should not be used to analyze 2008 mental illness data based on the 2012 model.

2005-2014: K6 and SPD Measures

Analyses of past year K6 and SPD can be measured with the adjusted past year K6 and SPD variables from 2005 through 2007 and the past year SPD variables from 2008 through 2014 using ANALWT_C.

Combining 2008-2014 Data

When combining data from any of the years between 2008 and 2014 to generate an annual average over a time period greater than 1 year for any of the mental health measures described in this appendix (i.e., K6, SPD, mental illness measures), a new weight should be created that divides the standard weight (ANALWT_C) by the number of years of data that are combined to correctly estimate weighted population totals. For example, to combine 2008-2014 data, divide ANALWT_C by 7.

APPENDIX F

Recoded Depression Variable Documentation

The 2014 National Survey on Drug Use and Health (NSDUH) computer-assisted interviewing (CAI) instrumentation included two modules, the adult depression module and the youth depression module, which were designed to measure whether or not respondents had experienced a major depressive episode (MDE) in their lifetime and past year. Additional questions to assess impairment levels caused by MDE and treatment received for depression were included at the end of each MDE module.

This appendix provides details about the questions designed to assess MDE, comparability issues across survey years, development of adjusted lifetime and past year MDE variables, variable naming conventions, and analysis and weighting information. Variable specifications for lifetime and past year MDE as well as MDE with severe impairment are also provided. A flowchart (see Figure 1) is included to provide details regarding the routing logic leading up to the MDE questions specifying which respondents were asked the MDE questions and were defined as having MDE. Appendix I, Key Mental Health Variables, provides a table with the variable names for the most commonly used NSDUH mental health measures (including MDE) as well as information regarding comparability across survey years 2002 through 2014.

The NSDUH CAI questions designed to assess MDE symptoms were based on the criteria in the *Diagnostic and Statistical Manual of Mental Disorders (DSM-IV)*, 4th edition (American Psychiatric Association, 1994). More specifically, MDE questions for adults were adapted from the depression section of the National Comorbidity Survey-Replication (NCS-R; Harvard School of Medicine, 2005), and those for youths were adapted from the depression section of the National Comorbidity Survey-Adolescent (NCS-A; Harvard School of Medicine, 2005). To make the modules developmentally appropriate for youths, there are minor wording differences in a few questions between the adult and youth modules. A person was defined as having had a lifetime MDE if he or she had five or more of nine symptoms for MDE in the same 2-week period in his or her lifetime, in which at least one of the symptoms was a depressed mood or loss of interest or pleasure in daily activities. A person was defined as having MDE in the past year if he or she had a lifetime MDE and a period of time in the past 12 months when he or she felt depressed or lost interest or pleasure in daily activities for 2 weeks or longer, while also having some of the other symptoms for lifetime MDE.

When the depression modules were first introduced in 2004, all youth respondents, but only half of adult respondents, received the questions because of a split-sample design. Further details on the 2004 split sample are provided in Appendix A of the 2004 national findings report (Office of Applied Studies [OAS], 2005b). Starting with the 2005 NSDUH, all youth and adult respondents received the questions in their respective depression modules. In the 2008 NSDUH, the adult mental health module was updated. This module precedes the adult depression module in the questionnaire which remained unchanged. In this revised 2008 mental health module, the K6 questions on nonspecific psychological distress were asked about two reference periods, the past 30 days and the month in the past 12 months when the distress was the worst. In addition, adult respondents were administered the mental health module through a split-sample design consisting of one of two impairment scales, an abbreviated World Health Organization Disability Assessment Schedule (WHODAS) or the Sheehan Disability Scale (SDS), to measure impairment due to emotions, nerves, or mental health. See the 2008 Recoded Mental Health Variable Documentation codebook appendix for further details. Starting in 2009, the split sample was removed, and the CAI instrument included only the WHODAS questions.

These changes and the fact that this revised mental health module precedes the adult depression module within the questionnaire could have influenced the adult respondent's answers to subsequent depression-related items. This type of influence is referred to as a context effect. A detailed analysis was conducted to examine potential context effects on MDE variables based on the changes in the mental health module. It was determined that MDE estimates for adults aged 18 or older from 2008 could not be compared with the 2007 and prior year estimates. Two subsamples (i.e., WHODAS and SDS) also were examined to determine whether the MDE data from the two 2008 subsamples were comparable. Because of differences in MDE estimates between the two samples, combining the SDS and WHODAS half-samples to produce an overall 2008 adult MDE estimate is not recommended. This applies to all adult MDE-related estimates (treatment/counseling for MDE, MDE-related impairment, etc.). Therefore, given the potential for comparability issues and to facilitate future trend analysis, only the WHODAS half-sample (MHSAMP08=1) is used for 2008 adult MDE estimation in the 2008 detailed tables (OAS, 2009a). See Appendix B, Section B.4.7, in the 2008 national findings report (OAS, 2009b) for further details on the decisions on the 2008 analyses.

Starting with the 2009 NSDUH, the mental health module included only the WHODAS questions; therefore, the estimates for adult MDE from 2009 onward can be compared with the WHODAS half-sample from 2008. See Appendix B, Section B.4.2, in the 2009 mental health findings report (Center for Behavioral Health Statistics and Quality [CBHSQ], 2010b) for details on the 2009 analyses.

In order to be able to use the full sample of 2008 data and also to make adult MDE comparisons across survey years starting with 2005 and continuing through 2008 and later years, adjusted versions of only adult past year MDE (AJAMDEYR) and adult lifetime MDE (AJAMDELT) variables were created retroactively for the years 2005 through 2008. These variables were adjusted to make MDE estimates from the SDS half-sample in 2008 and all adult respondents for 2005 through 2007 comparable with the MDE estimates based on the WHODAS half-sample in 2008 and all adult respondents in later years. More information about how the statistically adjusted adult MDE analysis variables were created can be found in the 2005-2008 codebooks and in the report describing these adjustments (Aldworth, Kott, Yu, Mosquin, & Barnett-Walker, 2012).

In 2009, changes were made to the youth mental health service utilization questions that preceded the questions about youth depression. These changes included the replacement of five questions that asked about receipt of special education services and school counseling and time spent in jail or foster care with questions that asked about receipt of mental health services in the education and justice system sectors. The presence of new items could have influenced how youths responded to the youth depression questions and therefore the estimates of youth MDE. An analysis was performed that showed these questionnaire changes in 2009 did not appear to affect the estimates of youth MDE. Therefore, it is possible to assess trends for past year MDE from 2004 to 2014 for youths aged 12 to 17 without the need for adjusted variables. For more information on the 2009 youth analyses results, see Appendix B, Section B.4.2, in the 2009 mental health findings report (CBHSQ, 2010b).

Naming Conventions

In the 2004-2007 NSDUHs, MDE data from both the adult and youth modules were used to create single, combined recoded lifetime (MDELT) and past year MDE (MDEYR) variables, even though adult and youth data were not comparable because of wording differences between the modules. In the 2004-2007 detailed tables, analyses using combined variables were subset to the age group of interest to present estimates separately for adults and youths (OAS, 2005a; 2006; 2007; 2008). Note that in the 2004 detailed tables only, estimates were also presented for adults and youths combined, but producing combined estimates is no longer recommended.

Starting with the 2008 NSDUH, the MDE variables were renamed, and a separate set of variables was created each for adults and for youths. The new variable names have continued to be used in the 2014 NSDUH. Under the new naming convention, adult MDE variables begin with "A" and youth MDE variables begin with "Y" (e.g., AMDEYR, YMDEYR). The youth MDE with impairment variable (MDEIMPY) does not follow this naming convention. Variables where youth and adult data were not combined into a single variable prior to 2008 were not renamed for youths (i.e., YSDSHOME, YSDSWRK, YSDSREL, YSDSSOC, YSDSOVRL, and MDEIMPY), since there was no change in variable construction or comparability. In addition, prior to 2008, the combined set of MDE variables was located in the Recoded Adult and Adolescent Depression section of the codebook. Currently, all adult and youth MDE variables are now located in either the Recoded Adult Depression or Recoded Adolescent Depression sections, respectively.

For adults, the new variable names denoted a break in the trend for the estimates due to the context effects noted earlier. To address the break in the trend, an adjustment was applied to the 2005-2008 adult MDE data, and the resulting new variables were retroactively added to the respective data files. These adjusted adult MDE variables begin with the abbreviation "AJ" for "adjusted" (i.e., AJAMDEYR, AJAMDELT). With the addition of the adjusted adult MDE variables, the documentation for the existing adult MDE variables was retroactively revised to refer to the existing variables as unadjusted adult MDE variables. In summary, for adults, the new variable names indicated that the MDE data from 2008 or later should not be compared or combined with unadjusted variables from 2004 to 2007. However, adjusted variables were later added for 2005 through 2008 to allow comparisons across years from 2005 onward. Adjusted adult MDE variables are not available for 2004. The adjusted variables for 2005 through 2008 can be renamed to match the adult past year MDE (AMDEYR) and adult lifetime MDE (AMDELT) variables for 2009 and subsequent years to produce comparable estimates across years, as seen in the 2014 mental health detailed tables (CBHSQ, 2015).

Comparability

New variable names indicate changes that may or may not impact comparability with prior years. As described above, the 2008 adult MDE estimates are not considered comparable with 2007 and prior years. For youths, despite the new variable names, the MDE data from 2008 or later can be compared or combined with MDE data from 2004 to 2007 since there was no change to the youth modules. But in order to do so, either the original or new set of youth MDE variables should be renamed to match the other so that the data can be combined. See the 2008 Recoded Depression Variable Documentation codebook appendix for sample code on how to

rename the 2008 or later survey year variables back to prior year names. In addition, a summary of variable names and comparability across years is presented in Table 1 for both adult and youth lifetime and past year MDE. All variables in a column are comparable for the time periods specified despite nonidentical variable names.

Table 1. Lifetime and Past Year Major Depressive Episode (MDE) Variable Comparability: 2004 NSDUH and Later Survey Years

| NSDUH Survey Year | Adult MDE | | | Youth MDE |
|----------------------|--------------------------------|--|--|---|
| | Comparable Variables 2004-2007 | Comparable Variables 2008 and Later Years Unadjusted Data | Comparable Variables 2005 and Later Years Adjusted Data | Comparable Variables 2004 and Later Years |
| 2004 | MDELT, MDEYR ¹ | | | MDELT, MDEYR ¹ |
| 2005-2007 | MDELT, MDEYR ¹ | | AJAMDELT, AJAMDEYR | MDELT, MDEYR ¹ |
| 2008 | | AMDELT, AMDEYR ² | AJAMDELT, AJAMDEYR | YMDELT, YMDEYR |
| 2009 and Later Years | | AMDELT, AMDEYR | AMDELT, AMDEYR | YMDELT, YMDEYR |

NOTE: All the variables within the same column are comparable across years, once the variables have been renamed to match.

¹ To use these lifetime and past year MDE variables in comparisons, the data must be subset to adults or youths depending on the analysis of interest. Presenting estimates using combined adult and youth data is not recommended due to wording differences between the adult and youth modules.

² To use these lifetime and past year MDE variables in comparisons, the data must be subset to the WHODAS subsample (MHSAMP08=1).

MDE Variable Specifications

In the adult and youth depression modules of the NSDUH, respondents were asked a series of introductory questions to determine whether they had a worst period of time where they experienced feeling sad, empty, depressed, discouraged, or a loss of interest. If a respondent fit certain criteria based on the routing logic found in these introductory questions, then they were asked the questions related to the nine attributes (symptoms) of MDE. In order to demonstrate which respondents were actually asked the MDE attributes questions based on these introductory questions, a flowchart using the adult questions is included as Figure 1. These introductory questions in addition to the questions related to the nine attributes associated with MDE (see below) were used to score MDE.

This appendix includes information used for adults to define the lifetime adult MDE variable (AMDELT), the adult past year MDE variable (AMDEYR), and the adult impairment recodes, all of which are found in the Recoded Adult Depression section of the codebook. Similar questions were asked of youth respondents and used to define similar youth MDE variables found in the Recoded Adolescent Depression section but are not specifically defined in this appendix. The questions shown in the flowchart and the documentation below refer to the adult depression-associated question indicator from the CAI instrument specifications followed by the corresponding edited variable name to assist users in mapping the information back to the CAI.

Figure 1. Routing Logic Prior to Adult Major Depressive Episode (MDE) Attribute Questions

The questions below showing the nine attributes of MDE refer to the worst period of time the respondent has had that stood out in his or her mind; or, if he or she did not recall a worst period of time, the questions refer to the most recent period of time when the respondent experienced any or all of the following: sadness, discouragement, or lack of interest in most things. These questions were asked once an adult respondent was routed through the CAI as indicated in the flowchart above. **It should be noted that no exclusions were made for MDE caused by medical illness, bereavement, or substance use disorders.**

During that [worst/most recent] period of time...

1. Depressed mood most of the day

- a. ... did you feel sad, empty, or depressed **most of the day nearly every day?** (AD24A/ADWRDEPR)
- b. ... did you feel discouraged about how things were going in your life **most of the day nearly every day?** (AD24C/ADWRDISC)

A respondent was assigned a positive response to this symptom (D_MDEA1/AD_MDEA1=1) if he or she answered yes to either of the above questions.

2. Markedly diminished interest or pleasure in all or almost all activities most of the day

- a. ... did you lose interest in almost all things like work and hobbies and things you like to do for fun? (AD24E/ADWRLSIN)
- b. ... did you lose the ability to take pleasure in having good things happen to you, like winning something or being praised or complimented? (AD24F/ADWRPLSR)

A respondent was assigned a positive response to this symptom (D_MDEA2/AD_MDEA2=1) if he or she answered yes to either of the above questions.

3. Weight

- a. Did you have a much smaller appetite than usual nearly every day during that time? (AD26A/ADWRELES)
- b. Did you have a much **larger** appetite than usual nearly every day? (AD26B/ADWREMR)
- c. Did you gain weight without trying to during that [worst/most recent] period of time? (AD26C/ADWRGAIN)
 - i. ... because you were growing? (AD26C1/ADWRGROW)
 - ii. ... because you were pregnant? (AD26C2/ADWRPREG)
- d. How many pounds did you gain? (AD26D/ADWRGNL2)
- e. Did you **lose** weight without trying to? (AD26E/ADWRLOSE)
 - i. ... because you were sick or on a diet? (AD26E1/ADWRDIET)
- f. How many pounds did you lose? (AD26F/ADWRLSL2)

A respondent was assigned a positive response to this symptom (D_MDEA3/AD_MDEA3=1) if he or she answered yes to questions 'a' or 'b' above, or the

answer to either question 'd' or 'f' was greater than or equal to 10. (Note that 'd' was only asked if ' c_i ' and ' c_{ii} ' were not 'yes,' and 'f' was only asked if ' e_i ' was not 'yes.'')

4. Insomnia or hypersomnia

- a. Did you have a lot more trouble than usual falling asleep, staying asleep, or waking too early nearly every night during that [worst/most recent] period of time?
(AD26G/ADWRSLEP)
- b. During that [worst/most recent] period of time, did you sleep a lot more than usual nearly every night? (AD26H/ADWRSMOR)

A respondent was assigned a positive response to this symptom
(D_MDEA4/AD_MDEA4=1) if he or she answered yes to either of the above questions.

5. Psychomotor agitation or retardation

- a. Did you talk or move more slowly than is normal for you nearly every day?
(AD26L/ADWRSLOW)
 - i. (if AD26L=1) Did anyone else notice that you were talking or moving slowly?
(AD26M/ADWRSLNO)
- b. Were you so restless or jittery nearly every day that you paced up and down or couldn't sit still? (AD26N/ADWRJITT)
 - i. (if AD26N=1) Did anyone else notice that you were restless?
(AD26O/ADWRJINO)

A respondent was assigned a positive response to this symptom
(D_MDEA5/AD_MDEA5=1) if he or she answered yes to either of the above ' a_i ' or ' b_i ' questions. (Note that ' a_i ' was only asked if 'a' was 'yes' and ' b_i ' was only asked if 'b' was 'yes.'')

6. Fatigue or loss of energy

- a. During that [worst/most recent] period of time, did you feel tired or low in energy nearly every day, even when you had not been working very hard? (AD26J/ADWRENRG)

A respondent was assigned a positive response to this symptom
(D_MDEA6/AD_MDEA6=1) if he or she answered yes to the above question.

7. Feelings of worthlessness

- a. Did you feel that you were not as good as other people nearly every day?
(AD26U/ADWRNOGD)
 - i. (if AD26U=1) Did you feel totally worthless nearly every day?
(AD26V/ADWRWRTH)

A respondent was assigned a positive response to this symptom
(D_MDEA7/AD_MDEA7=1) if he or she answered yes to question ' a_i '. (Note that ' a_i ' was only asked if 'a' was 'yes'.')

8. Diminished ability to think or concentrate or indecisiveness

- a. During that [worst/most recent] time period, did your thoughts come much more slowly than usual or seem confused nearly every day? (AD26P/ADWRTHOT)
- b. Did you have a lot more trouble concentrating than usual nearly every day? (AD26R/ADWRCONC)
- c. Were you unable to make decisions about things you ordinarily have no trouble deciding about? (AD26S/ADWRDCSN)

A respondent was assigned a positive response to this symptom (D_MDEA8/AD_MDEA8=1) if he or she answered yes to any of the above questions.

9. Recurrent thoughts of death or recurrent suicide ideation

- a. Did you often think about death, either your own, someone else's, or death in general? (AD26AA/ADWRDLT)
- b. During that period, did you ever think it would be better if you were dead? (AD26BB/ADWRDBTR)
- c. Did you think about committing suicide? (AD26CC/ADWRSTHK)
 - i. (if AD26CC=1) Did you make a suicide plan? (AD26DD/ADWRSPN)
 - ii. (if AD16CC=1) Did you make a suicide attempt? (AD26EE/ADWRSATP)

A respondent was assigned a positive response to this symptom (D_MDEA9/AD_MDEA9=1) if he or she answered yes to any of the above questions.

Respondents were classified with lifetime MDE (AMDELT=1 for adults) if they had at least five of the nine above attributes (DSMMDEA2/ADSMMDEA=1 for adults). Respondents were classified with not having lifetime MDE (AMDELT=2 for adults) if they met either of these conditions:

1. Reported experiencing fewer than five out of the nine criteria used to define an adult as having had MDE in their lifetime (DSMMDEA2/ADSMMDEA=2).
2. If the number of criteria is unknown (DSMMDEA2/ADSMMDEA=98) and the respondent reported at least one of the following:
 - I. Never having had a period of time lasting several days or longer when felt sad, empty, or depressed (ASC21/ADDPREV=2), discouraged about how things were going in life (ASC22/ADDSCFV=2), and lost interest in most things usually enjoyable (ASC23/ADLOSEV=2).
 - II. Experienced the feelings in (I), but they did not last most of the day, nearly every day for two weeks or longer (AD09/ADLSI2WK=2) or (AD12/ADDPR2WK=2).
 - III. Experienced the feelings in (I) most of the day, nearly every day for two weeks or longer, but the feelings lasted less than an hour when mood was most severe and frequent (AD16/ADWRHRS=1).
 - IV. Experienced the feelings in (I) most of the day, nearly every day for two weeks or longer for at least an hour during those times when mood was most severe and frequent, but emotional distress was mild (AD17/ADWRDST=1),

there was never a time when emotional distress was so severe that you could not be cheered up (AD18/ADWRCHR=4), and there was never a time when you emotional distress was so severe that you could not carry out your daily activities (AD19/ADWRIMP=4).

- V. Experienced the feelings in (I) most of the day, nearly every day for two weeks or longer for at least an hour and the severe distress were more than mild or at some point could not be cheered up or could not carry out daily activities, but never had any other problems during those weeks, such as changes in sleep, appetite, energy, the ability to concentrate and remember, or feelings of low self-worth (AD21/ADDPPROB=2).

Respondents who were classified with lifetime MDE (AMDELT=1 for adults and YMDELT=1 for youths) and who reported that during the past 12 months they had a period of depression lasting 2 weeks or longer, while also having some of the other symptoms mentioned (ADPB2WK=1 for adults and YOPB2WK=1 for youths), were classified as having past year depression (AMDEYR=1 for adults and YMDEYR=1 for youths). Respondents with no lifetime MDE (AMDELT=2 for adults or YMDELT=1 for youths) or respondents with lifetime MDE (AMDELT=1 for adults and YMDELT=1 for youths) but no period of depression lasting 2 weeks or longer while having other symptoms (ADPB2WK=2 for adults or YOBP2WK=2 for youths) were defined as not having past year MDE (AMDEYR=2 for adults or YMDEYR=2 for youths).

Otherwise, respondents were classified as missing for lifetime or past year MDE if they had unknown depression information and/or they were aged 12 to 17 (for adults) or aged 18 or older (for youth).

Respondents with lifetime MDE and respondents with recurrent thoughts of death or recurrent suicide ideation (D_MDEA9/AD_MDEA9=1 for adults and D_MDEA9Y/YO_MDEA9=1 for youths), regardless of MDE classification, were guided through the remainder of the depression module. Note that because of this second criterion, variables for treatment of depression may have values for respondents who were not classified as having lifetime MDE. If the subpopulation of interest is respondents with lifetime MDE or past year MDE, these restrictions should be implemented in the analysis using the appropriate variables. Users who are interested in the suicide ideation data¹ from the depression modules should also be aware of the routing logic shown in Figure 1 because only a subset of respondents are asked the suicide-related questions.

MDE with Severe Impairment Variable Specifications

Respondents defined as having had MDE in the past year were then asked questions from the SDS to measure the level of functional impairment in major life activities reported to be caused by the MDE in the past 12 months (Leon, Olfson, Portera, Farber, & Sheehan, 1997).

The questions pertaining to the four domains are shown below with their associated question indicator from the CAI specifications as well as the edited variable name in parentheses

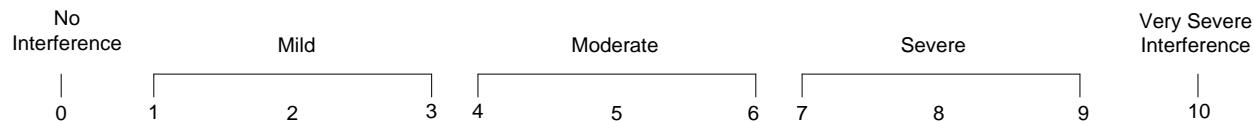

¹ The suicide estimates presented in the 2014 mental health detailed tables (CBHSQ, 2015) are from the mental health module data, not the depression suicide module data.

for both adults and youths. The SDS measures mental health-related impairment in four major life activities or role domains. These four domains are defined separately for adults aged 18 or older and youths aged 12 to 17 to reflect the different roles associated with the two age groups. Each module consists of four questions that are assessed on a 0 to 10 visual analog scale with categories of "no interference" (0), "mild" (1-3), "moderate" (4-6), "severe" (7-9), and "very severe" (10).

Adult Depression Module: Functional Impairment

- AD66a** Think about the time in the past 12 months when these problems with your mood were **most severe**.

Using the 0 to 10 scale shown below, where 0 means **no** interference and 10 means very **severe** interference, select the number that describes how much these problems interfered with your **ability to do** each of the following activities during that period. You can use any number between 0 and 10 to answer.

How much did your [depression symptoms] interfere with your **ability to do home management tasks**, like cleaning, shopping, and working around the house, apartment, or yard? (ADPSHMGMT)

- AD66b** During the time in the past 12 months when your [depression symptoms] were most severe, how much did this interfere with your **ability to work**? (ADPSWORK)

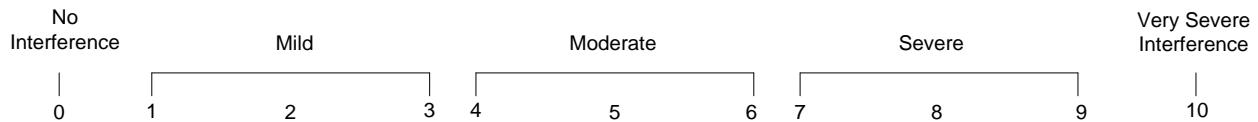

- AD66c** How much did your [depression symptoms] interfere with your **ability to form and maintain close relationships** with other people during that period of time? (ADPSRELS)

- AD66d** How much did [depression symptoms] interfere with your **ability to have a social life** during that period of time? (ADPSSOC)

Adolescent Depression Module: Functional Impairment

- YD66a** Think about the time in the past 12 months when these problems with your mood were the **worst**.

Using the 0 to 10 scale shown below, where 0 means **no** problems and 10 means very **severe** problems, select the number that describes how much your [depression symptoms] caused problems with your **ability to do** each of the following activities during that time. You can use any number between 0 and 10 to answer.

How much did your [depression symptoms] cause problems with your **chores at home?** (YOPSHMGT)

- YD66b** During the time in the past 12 months when your [depression symptoms] were worst, how much did this cause problems with your **ability to do well at school or work?** (YOPSWORK)
- YD66c** How much did your [depression symptoms] cause problems with your **ability to get along with your family** during that time? (YOPSRELS)
- YD66d** How much did your [depression symptoms] cause problems with your **ability to have a social life** during that time? (YOPSSOC)

The four SDS role domain variables were recoded so that no interference=1, mild=2, moderate=3, severe=4, and very severe=5. A maximum impairment score (ASDSOVL2 for adults and YSDSOVRL for youths) was then defined as the single highest severity level of role impairment across all four SDS role domains. Ratings greater than or equal to 7 on the original SDS scale (ASDSOVL2 or YSDSOVRL=4, 5) were considered severe impairment. Respondents were classified as missing if they had unknown impairment information for all four SDS domain variables, were not asked the question due to routing logic, and/or they were aged 12 to 17 (for adults) or aged 18 or older (for youths).

Estimates for past year MDE with severe impairment (AMDEIMP=1 for adults and MDEIMPY=1 for youths) are presented for 2009 to 2014 for adults and for 2006 to 2014 for youths in the 2014 mental health detailed tables (CBHSQ, 2015). The adult MDE with severe impairment variable is not comparable with NSDUH data prior to 2008 for the reasons discussed previously. Youth MDE with severe impairment data are comparable from 2006 onward.

Weights

Analyses on unadjusted 2008 data that include only adults from the WHODAS half-sample (subset to MHSAMP08=1), such as the 2008 adult MDE analyses in the 2008 detailed tables (OAS, 2009a) or in the 2009 mental health detailed tables (CBHSQ, 2010a), should be weighted by an alternate analysis weight (MHSAWT_C). (Note that 2008 analyses including only adults from the SDS half-sample [subset to MHSAMP08=2] should also be weighted by MHSAWT_C.) This weight has been poststratified so that each of the half-samples is separately representative of the civilian, noninstitutionalized population aged 18 or older. Generating 2008 adult MDE estimates using the entire unadjusted adult sample (both WHODAS and SDS half-samples) is not recommended. To compare or combine 2008 unadjusted adult MDE (using only the WHODAS subsample) and 2009-2014 adult MDE data, users should create a new weight variable that takes on the value of MHSAWT_C for 2008 respondents and the value of ANALWT_C for 2009-2014 respondents. When doing this, users should restrict the unadjusted 2008 data to MHSAMP08=1 since the 2009-2014 NSDUHs use WHODAS questions and are

comparable with only the 2008 WHODAS half-sample. The standard analysis weight (ANALWT_C) should be used for MDE analyses that include either the entire youth sample (i.e., any year) or adult sample (i.e., 2009 through 2014), such as those in the 2014 mental health detailed tables.

To analyze the 2005-2008 adjusted adult MDE variables in conjunction with the 2009-2014 adult MDE variables (e.g., the MDE multiyear trend analyses published in the 2014 mental health detailed tables [CBHSQ, 2015]), the standard analysis weight (ANALWT_C) should be used across all years.

Furthermore, when creating estimates based on more than a single year of data, the appropriate weight for each year should be divided by the number of years of data that are combined to correctly estimate weighted population totals. For example, if a user combines 2008-2014 data to generate an annual average using the unadjusted adult MDE data, the new weight previously described should be divided by 7.

Occupational Classification System for PUF Recodes

| 2003 Census Code | Occupation category |
|---------------------------------|--|
| 1 | Executive/Admin/Managerial/Financial |
| | Chief Executives |
| | General and Operations Managers |
| | Legislators |
| | Advertising and Promotions Managers |
| | Marketing and Sales Managers |
| | Public Relations Managers |
| | Administrative Services Managers |
| | Computer and Information Systems Managers |
| | Financial Managers |
| | Human Resources Managers |
| | Industrial Production Managers |
| | Purchasing Managers |
| | Transportation, Storage, and Distribution Managers |
| | Farm, Ranch, and Other Agricultural Managers |
| | Farmers and Ranchers |
| | Construction Managers |
| | Education Administrators |
| | Engineering Managers |
| | Food Service Managers |
| | Funeral Directors |
| | Gaming Managers |
| | Lodging Managers |
| | Medical and Health Services Managers |
| | Natural Sciences Managers |
| | Postmasters and Mail Superintendents |
| | Property, Real Estate, and Community Association Managers |
| | Social and Community Service Managers |
| | Managers, All Other |
| | Agents and Business Managers of Artists, Performers, and Athletes |
| | Purchasing Agents and Buyers, Farm Products |
| | Wholesale and Retail Buyers, Except Farm Products |
| | Purchasing Agents, Except Wholesale, Retail, and Farm Products |
| | Claims Adjusters, Appraisers, Examiners, and Investigators |
| | Compliance Officers, Except Agriculture, Construction, Health and Safety, and Transportation |
| | Cost Estimators |
| | Human Resources, Training, and Labor Relations Specialists |
| | Logisticians |
| | Management Analysts |
| | Meeting and Convention Planners |
| | Other Business Operations Specialists |
| | Accountants and Auditors |
| | Appraisers and Assessors of Real Estate |
| | Budget Analysts |
| | Credit Analysts |
| | Financial Analysts |
| | Personal Finance Advisors |
| | Insurance Underwriters |
| | Financial Examiners |
| | Loan Counselors and Officers |
| | Tax Examiners, Collectors, and Revenue Agents |
| | Tax Preparers |
| | Financial Specialists, All Other |
| 2 | Professional (not Educ/Entertain/Media) |
| | Computer Scientists and Systems Analysts |
| | Computer Programmers |
| | Computer Software Engineers |
| | Computer Support Specialists |
| | Database Administrators |
| | Network and Computer Systems Administrators |
| | Network Systems and Data Communications Analysts |
| | Actuaries |
| | Mathematicians |
| | Operations Research Analysts |
| | Statisticians |
| | Miscellaneous Mathematical Occupations |
| | Architects, Except Naval |
| | Surveyors, Cartographers, and Photogrammetrists |
| | Aerospace Engineers |
| | Agriculture Engineers |
| | Biomedical Engineers |
| | Chemical Engineers |
| | Civil Engineers |
| | Computer Hardware Engineers |
| | Electrical and Electronics Engineers |
| | Environmental Engineers |
| | Industrial Engineers, Including Health and Safety |
| | Marine Engineers and Naval Architects |
| | Materials Engineers |
| | Mechanical Engineers |
| | Mining and Geological Engineers, Including Mining Safety Engineers |
| | Nuclear Engineers |
| | Petroleum Engineers |
| | Engineers, All Other |
| | Agricultural and Food Scientists |
| | Biological Scientists |
| | Conservation Scientists and Foresters |
| | Medical Scientists |
| | Astronomers and Physicists |

| Multiple Machine Tool Setters, Operators, and Tenders, Metal and Plastic | Packaging and Filling Machine Operators and Tenders |
| Tool and Die Makers | Painting Workers |
| Welding, Soldering, and Brazing Workers | Photographic Process Workers and Processing Machine Operators |
| Heat Treating Equipment Setters, Operators, and Tenders, Metal and Plastic | Semiconductor Processors |
| Lay-Out Workers, Metal and Plastic | Cementing and Gluing Machine Operators and Tenders |
| Plating and Coating Machine Setters, Operators, and Tenders, Metal and Plastic | Cleaning, Washing, and Metal Pickling Equipment Operators and Tenders |
| Tool Grinders, Filers, and Sharpeners | Cooling and Freezing Equipment Operators and Tenders |
| Metalworkers and Plastic Workers, All Other | Etchers and Engravers |
| Bookbinders and Bindery Workers | Molders, Shapers, and Casters, Except Metal and Plastic |
| Job Printers | Paper Goods Machine Setters, Operators, and Tenders |
| Prepress Technicians and Workers | Tire Builders |
| Printing Machine Operators | Helpers – Production Workers |
| Laundry and Dry-Cleaning Workers | Production Workers, All Other |
| Pressers, Textile, Garment, and Related Materials | |
| Sewing Machine Operator | |
| Shoe and Leather Workers and Repairers | 14 Transportation and Material Moving Workers |
| Shoe Machine Operators and Tenders | Supervisors, Transportation and Material Moving Workers |
| Tailors, Dressmakers, and Sewers | Aircraft Pilots and Flight Engineers |
| Textile Bleaching and Dyeing Machine Operators and Tenders | Air Traffic Controllers and Airfield Operations Specialists |
| Textile Cutting Machine Setters, Operators, and Tenders | Ambulance Drivers and Attendants, Except Emergency Medical Technicians |
| Textile Knitting and Weaving Machine Setters, Operators, and Tenders | Bus Drivers |
| Textile Winding, Twisting, and Drawing Out Machine Setters, Operators, and Tenders | Driver/Sales Workers and Truck Drivers |
| Extruding and Forming Machine Setters, Operators, and Tenders, Synthetic and Glass Fibers | Taxi Drivers and Chauffeurs |
| Fabric and Apparel Patternmakers | Motor Vehicle Operators, All Other |
| Upholsters | Locomotive Engineers and Operators |
| Textile, Apparel, and Furnishings Workers, All Other | Railroad Brake, Signal, and Switch Operators |
| Cabinetmakers and Bench Carpenters | Railroad Conductors and Yardmasters |
| Furniture Finishers | Subway, Streetcar, and Other Rail Transportation Workers |
| Model Makers and Patternmakers, Wood | Sailors and Marine Oilers |
| Sawing Machine Setters, Operators, and Tenders, Wood | Ship and Boat Captains and Operators |
| Woodworking Machine Setters, Operators, and Tenders, Except Sawing | Ship Engineers |
| Woodworkers, All Other | Bridge and Lock Tenders |

2003

**Census Occupation category
Code**

Dredge, Excavating, and Loading Machine Operators
Hoist and Winch Operators
Industrial Truck and Tractor Operators
Cleaners of Vehicles and Equipment
Laborers and Freight, Stock, and Material Movers,
Hand
Machine Feeders and Offbearers
Packers and Packagers, Hand
Pumping Station Operators
Refuse and Recyclable Material Collectors
Shuttle Car Operators
Tank Car, Truck, and Ship Loaders
Material Moving Workers, All Other

APPENDIX H

Industry Classification System for PUF Recodes

| 2003 | Census | Industry category | Code |
|-------------|---|--------------------------|-------------|
| 1 | Agriculture, Forestry, Fishing and Hunting | | |
| | Crop production | | |
| | Animal production | | |
| | Forestry except Logging | | |
| | Logging | | |
| | Fishing, hunting, and trapping | | |
| | Support activities for agriculture and forestry | | |
| 2 | Mining | | |
| | Oil and gas extraction | | |
| | Coal mining | | |
| | Metal ore mining | | |
| | Nonmetallic mineral mining and quarrying | | |
| | Not specified type of mining | | |
| | Support activities for mining | | |
| 3 | Construction | | |
| | Constructions (Includes the cleaning of buildings and dwellings is incidental during construction and immediately after construction) | | |
| 4 | Manufacturing, Nondurable Goods | | |
| | Food Manufacturing | | |
| | Animal food, grain and oilseed milling | | |
| | Sugar and confectionery products | | |
| | Fruit and vegetable preserving and specialty foods | | |
| | Dairy products | | |
| | Animal slaughtering and processing | | |
| | Retail bakeries | | |
| | Bakeries, except retail | | |
| | Seafood and other miscellaneous food | | |
| | Not specified food industries | | |
| | Beverage and Tobacco Product Manufacturing | | |
| | Beverage | | |
| | Tobacco | | |
| | Textile Mills and Textile Product Mills | | |
| | Fiber, yarn, and thread mills | | |
| | Fabric mills, except knitting | | |
| | Textile and fabric finishing and coating mills | | |
| | Carpets and rugs | | |
| | Textile product mills except carpets and rugs | | |
| | Apparel Manufacturing | | |
| | Knitting mills | | |
| | Cut and sew apparel | | |
| | Apparel accessories and other apparel | | |
| | Leather and Allied Product Manufacturing | | |
| | Footwear | | |
| | Leather tanning and products, except footwear | | |
| | Paper Manufacturing | | |
| | Pulp, paper, and paperboard mills | | |
| | Paperboard containers and boxes | | |
| | Miscellaneous paper and pulp products | | |
| | Printing and Related Support Activities | | |
| | Printing and related support activities | | |
| | Petroleum and Coal Products Manufacturing | | |
| | Petroleum refining | | |
| | Miscellaneous petroleum and coal products | | |
| | Chemical Manufacturing | | |
| | Resin, synthetic rubber and fibers, and filaments | | |
| | Agricultural chemicals | | |
| | Pharmaceuticals and medicines | | |
| | Paint, coating, and adhesives | | |
| | Soap, cleaning compound, and cosmetics | | |
| | Industrial and miscellaneous chemicals | | |
| | Plastics and Rubber Product Manufacturing | | |
| 5 | Manufacturing, Durable Goods | | |
| | Plastics products | | |
| | Tires | | |
| | Rubber products, except tires | | |
| | Nonmetallic Mineral Product Manufacturing | | |
| | Pottery, ceramics, and related products | | |
| | Structural clay products | | |
| | Glass and glass products | | |
| | Cement, concrete, lime, and gypsum products | | |
| | Miscellaneous nonmetallic mineral products | | |
| | Metal Industries | | |
| | Iron and steel mills and steel products | | |
| | Aluminum production and processing | | |
| | Nonferrous metal, except aluminum, production and processing | | |
| | Foundries | | |
| | Metal forgings and stampings | | |
| | Cutlery and hand tools | | |
| | Structural metals, and tank and shipping containers | | |
| | Machine shops; turned products; screws, nuts and bolts | | |
| | Coating, engraving, heat treating and allied activities | | |
| | Ordnance | | |
| | Miscellaneous fabricated metal products | | |
| | Not specified metal industries | | |
| | Machinery Manufacturing | | |
| | Agricultural implements | | |
| | Construction mining and oil field machinery | | |
| | Commercial and service industry machinery | | |
| | Metalworking machinery | | |
| | Engines, turbines, and power transmission equipment | | |
| | Machinery | | |
| | Not specified machinery | | |
| | Computer and Electronic Product Manufacturing | | |
| | Computer and peripheral equipment | | |
| | Communications, audio, and video equipment | | |
| | Navigational, measuring, electrometrical, and control instruments | | |
| | Electronic components and products | | |
| | Electrical Equipment, Appliances, and Component Manufacturing | | |
| | Household appliances | | |
| | Electrical machinery, equipment, and supplies | | |
| | Transportation Equipment Manufacturing | | |
| | Motor vehicles and motor vehicle equipment | | |
| | Aircraft and parts | | |
| | Aerospace products and parts | | |
| | Railroad rolling stock | | |
| | Ship and boat building | | |
| | Other transportation equipment | | |
| | Wood Products, including Furniture, Manufacturing | | |
| | Sawmills and wood preservation | | |
| | Veneer, plywood, and engineered wood products | | |
| | Prefabricated wood buildings and mobile homes | | |
| | Miscellaneous wood products | | |
| | Furniture and fixtures | | |
| | Miscellaneous Manufacturing | | |
| | Medical equipment and supplies | | |
| | Toys, amusement, and sporting goods | | |
| | Miscellaneous manufacturing | | |
| | Not specified industries | | |

| | Radio and television broadcasting and cable | |
| | Internet and publishing and broadcasting | |
| | Wired telecommunications carriers | |
| | Other telecommunication services | |
| | Internet service providers | |
| | Data processing, hosting, and related services | |
| | Information Services and Data Processing | |
| | Services | |
| | Libraries and archives | |
| | Other information services | |
| 8 | Wholesale Trade, Durable Goods | |
| | Motor vehicles, parts and supplies | |
| | Furniture and home furnishing | |
| | Lumber and other construction materials | |
| | Professional and commercial equipment and supplies | |
| | Metals and minerals, except petroleum | |
| | Electrical goods | |
| | Hardware, plumbing and heating equipment, and supplies | |
| | Machinery, equipment, and supplies | |
| | Recyclable materials | |
| | Miscellaneous durable goods | |
| 9 | Wholesale Trade, Nondurable Goods | |
| | Paper and paper products | |
| | Drugs, sundries, and chemical and allied products | |
| | Apparel, fabrics, and notions | |
| | Groceries and related products | |
| | Farm product raw materials | |
| | Petroleum and petroleum products | |
| | Alcoholic beverages | |
| 10 | Retail Trade | |
| | Automobile dealers | |
| | Other motor vehicle dealers | |
| | Auto parts, accessories, and tire stores | |
| | Furniture and home furnishings stores | |
| | Household appliance stores | |
| | Radio, TV, and computer stores | |
| | Building material and supplies dealers | |
| | Hardware stores | |
| | Lawn and garden equipment and supplies stores | |
| | Grocery stores | |
| | Specialty food stores | |
| | Beer, wine, and liquor stores | |
| | Pharmacies and drug stores | |
| | Health and personal care, except drug | |
| | Gasoline stations | |
| | Clothing and accessories, except shoe | |
| | Shoe stores | |
| | Jewelry, luggage, and leather goods stores | |
| | Sporting goods, camera, and hobby and toy stores | |
| | Sewing, needlework and piece goods stores | |
| | Music stores | |
| | Book stores and news dealers | |
| | Department stores and Discount stores | |
| | Miscellaneous general merchandise stores | |
| | Retail florists | |
| | Office supplies and stationary stores | |
| | Used merchandise stores | |
| | Gift, novelty, and souvenir shops | |
| | Miscellaneous stores | |
| | Electronic shopping | |
| | Electronic auctions | |
| | Mail order houses | |
| | Vending machine operators | |
| | Fuel dealers | |
| | Other direct selling establishments | |
| | Not specified trade | |
| 11 | Finance, Insurance, Real Estate, And Rental And Leasing | |
| | Finance and Insurance | |
| | Banking and related activities | |
| | Savings institutions, including credit unions | |
| | Non-depository credit and related activities | |
| | Securities, commodities, funds, trusts, and other financial investments | |
| | Insurance carriers and related activities | |
| | Real Estate and Rental and Leasing | |
| | Real estate | |
| | Automotive equipment rental and leasing | |
| | Video tape and disk rental | |
| | Other consumer goods rental | |
| | Commercial, industrial, and other intangible assets rental and leasing | |
| 12 | Professional, Scientific, Management, Administrative, And Waste Management Services | |
| | Professional, Scientific, and Technical Services | |
| | Legal services | |

| 2003 Census Code | Industry category | 2003 Census Code | Industry category |

| | Problem Referral | | |
| | Uncodable (includes Refused, Retired, reported Classified, or Not in Labor Force) | | |
| | Active Duty Military (for Census and ACS) | | |
| | U.S. Army | | |
| | U.S. Air Force | | |
| | U.S. Navy | | |
| | U.S. Marines | | |
| | U.S. Coast Guard | | |
| | U.S. Armed Forces, Branch Not Specified | | |
| | Military Reserves or National Guard | | |
| 16 | Other Services (Except Public Administration) | | |
| | Repair and Maintenance | | |
| | Automotive repair and maintenance | | |
| | Car washes | | |
| | Electronic and precision equipment repair and maintenance | | |
| | Commercial and industrial machinery and equipment repair and maintenance | | |
| | Personal and household goods repair and maintenance | | |
| | Footwear and leather goods repair | | |
| | Personal and Laundry Services | | |
| | Barber shops | | |
| | Beauty salons | | |
| | Nail salons and other personal care services | | |
| | Dry cleaning and laundry services | | |
| | Funeral homes, cemeteries and crematories | | |
| | Other personal services | | |
| | Religious, Grantmaking, Civic, Business, and Similar Organizations | | |
| | Religious organizations | | |
| | Civic, social, advocacy organizations and grantmaking and giving services | | |
| | Labor unions | | |
| | Business, professional, political and similar organizations | | |
| | Private Households | | |

APPENDIX I

Key Mental Health Variables

This Key Mental Health Variables appendix provides several tables that list a set of the most commonly used mental health measures, their associated variable names, and their availability from 2002 to 2014 for the National Survey on Drug Use and Health (NSDUH). These tables also show whether there are comparable or adjusted measures available for the years indicated. Table 1 lists key mental health measures for youths aged 12 to 17, Table 2 lists key mental health measures for adults aged 18 or older, and Table 3 lists the mental health measures that have adjusted versions that allow for the comparisons of estimates across the years where changes were made. Because of such changes, this appendix is being provided as a guide in helping users with these commonly used mental health variables.

As noted above, this appendix only contains a subset of the mental health variables available. Groups of variables that are defined similarly may not all be included in the tables below. Examples of these groups are the variables for location of outpatient mental health treatment and the reason for not receiving mental health treatment, which are listed in Table 2. The variables for location where outpatient mental health treatment was received such as at a day hospital or treatment program (MHLDTMT3), at a school setting (MHLSCHL3), and other locations (MHLOTH3) are not specifically listed in Table 2 but are defined similarly to the variable for received outpatient mental health treatment from private therapist (MHLTHER3) and follow the same pattern of comparability. The variables for reasons for not receiving mental health treatment including fear of negative affect on job (MHRJOBS2), insurance does not cover treatment at all (MHRNCOV2), have no transportation to treatment or inconvenient (MHRTRAN2), and did not want others to find out (MHRFOUT2) are also not listed in Table 2 but follow the same comparability pattern as the variable for reason for not receiving mental health treatment because could not afford cost (MHRCOST2). This appendix is intended to be a guide to assist analysts in their use of mental health measures and does not include a full list of all mental health measures that are available.

There have been several mental health-related questionnaire and estimation changes that impact the comparability of mental health data over time. One such change made to the 2004 and 2008 questionnaires affected the mental health measures of serious psychological distress (SPD) and lifetime and past year major depressive episode (MDE). These changes resulted in noncomparable measures that caused breaks in the trends. Adjusted measures were created that allowed comparisons of estimates across the years where the changes were made. Refer to Aldworth, Kott, Yu, Mosquin, and Barnett-Walker (2012) for details on the adjusted measures, Appendix F, Recoded Depression Variable Documentation, for MDE details, and Appendix E, Recoded Mental Health Module Variable Documentation, for SPD details.

The NSDUH operational definition of serious mental illness (SMI) has also undergone some changes. In previously published 2002–2003 NSDUH reports, the K6 scale used for determining psychological distress was used to produce estimates that were termed "SMI," but in 2004, the estimate produced using the K6 was renamed "SPD." Starting in 2008, a new measure of SMI was produced that used a statistical model to predict mental illness based on a respondent's answers to the NSDUH K6 and World Health Organization Disability Assessment Schedule (WHODAS) questions. For more details on this new SMI measure, see Appendix B, Section B.4.3, in the 2009 mental health findings report (Center for Behavioral Health Statistics and Quality [CBHSQ], 2010). This model was revised to produce improved mental illness

estimates starting with the 2012 NSDUH. This updated 2012 model was then used to create revised comparable mental illness estimates for 2008 through 2011. For details on these mental illness revisions, see Appendix B, Section B.4.3, in the 2012 mental health findings report (CBHSQ, 2013). Because of this change, mental illness variables based on the 2012 model have been created from 2008 and later years. For more information on how mental illness variables were created and how to use these variables, see Appendix E, Recoded Mental Health Module Variable Documentation.

Table 1. Key Mental Health Measures for People Aged 12 to 17: 2002–2014

| Mental Health Measure (Variable Name) | Years Available | | | | | | | | | | | | |
|--|------------------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|

| Received Specialty MH Services because of Problems with Friends (SMHFRND, SMHFRND2) ^{2,4} | | | | | — | — | — | — | — | — | X ⁵ | X | X |
| Received Specialty MH Services because of Problems with Other People (SMHOTPP, SMHOTPP2) ^{2,4} | | | | | — | — | — | — | — | — | X ⁵ | X | X |
| Received Specialty MH Services because of Eating Problems (SMHEAT, SMHEAT2) ^{2,4} | | | | | — | — | — | — | — | — | X ⁵ | X | X |
| Received Specialty MH Services because of Getting into Physical Fights (SMHFITE, SMHFITE2) ^{2,4} | | | | | — | — | — | — | — | — | X ⁵ | X | X |
| Received Specialty MH Services because of Diagnosed Mental Disorder (SMHMEND, SMHMEND2) ^{2,4} | | | | | — | — | — | — | — | — | X ⁵ | X | X |

MD = medical doctor, MDE = major depressive episode, MH = mental health.

NOTE: The letter X indicates that the measure is available for the year(s) shown. For measures with two variable names listed, the first name corresponds with either the asterisk (*) or the en dash (–) and the second name corresponds to the letter X in the years available columns. An asterisk (*) indicates that a comparable measure with 2008 and later years is available for the year(s) shown; thus, variables corresponding to those measures in the indicated years can be renamed to conduct analyses with the 2008 and later year variables. An en dash (–) indicates that a comparable measure with later years is **not** available; thus, variables corresponding to those measures should not be compared across breaks in comparability (i.e., do not compare those measures with an en dash (–) with those measures with the letter X). An empty cell indicates that the measure is not available.

NOTE: The standard analysis weight, ANALWT_C, should be used for all measures and years.

NOTE: This table lists only the most commonly used mental health measures; it does not constitute a comprehensive list.

NOTE: This table was finalized on September 10, 2015.

¹ These variables were created for years prior to 2010 during the 2014 NSDUH and are comparable with 2010 and later variables.

² Revised mental health service variables were developed starting in 2013 because of the change in how the child welfare setting was defined. Prior to 2013, child welfare was defined in the specialty services category as an inpatient service. Child welfare is now defined as a nonspecialty service.

³ A similarly named measure (without the "2") exist for years 2002 through 2013 but are no longer being created starting with the 2014 NSDUH.

⁴ For measures with two variable names listed, the second-named variables include this change. The original measures (first-named variables) are no longer being created starting with the 2013 NSDUH but are instead replaced with the revised variables.

⁵ Both versions of these mental health service variables exist for the 2012 NSDUH because 2012 and 2013 estimates are presented in the 2013 mental health detailed tables (CBHSQ, 2014). The first- and second-named variables are **not** comparable for 2012.

| Received Prescription Med MH Treatment in Past Year (AMHRX2) | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Perceived Need but Did Not Receive MH Treatment in Past Year (AMHTXND2) | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Perceived Unmet Need and Receipt of MH Treatment (AMHTXAND) | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Received Outpatient MH Treatment at MH Clinic/Center in Past Year (MHLMNT3) ² | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Received Outpatient MH Treatment from Private Therapist in Past Year (MHLTHER3) ² | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Received Outpatient MH Treatment from Non-Clinic Doctor's Office in Past Year (MHLDOC3) ² | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Received Outpatient MH Treatment from Medical Clinic in Past Year (MHLCLNC3) ² | X | X | X | X | X | X | X | X | X | X | X | X | X |
| Respondent or Other Family Member Paid for Outpatient MH Treatment in Past Year (MHPDSL2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Private Health Insurance Paid for Outpatient MH Treatment in Past Year (MHPDPHI2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Medicare Paid for Outpatient MH Treatment in Past Year (MHPDMCR2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Medicaid Paid for Outpatient MH Treatment in Past Year (MHPDMCD2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Employer Paid for Outpatient MH Treatment in Past Year (MHPDEMP2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Could Not Afford Cost (MHRCOST2) | | X | X | X | X | X | X | X | X | X | X | X | X |

Table 2. Key Mental Health Measures for People Aged 18 or Older: 2002–2014 (continued)

| Mental Health Measure (Variable Name) | Years Available | | | | | | | | | | | | |
|--|-----------------|------|------|------|------|------|------|------|------|------|------|------|------|
| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |
| Did Not Receive MH Treatment because Thought Could Handle Problem without Treatment (MHRHAND2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Did Not Know Where To Go (MHRWHER2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Did Not Have Time (MHRTIME2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Did Not Think Treatment Would Help (MHRNOHP2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because of Concerns about Confidentiality (MHRCFID2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Insurance Did Not Pay Enough (MHRENUF2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Did Not Think Treatment Was Needed (MHRNOND2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Fear of Neighbors' Negative Opinion (MHRNBRS2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Did Not Receive MH Treatment because Fear of Being Committed (MHRCMIT2) | | X | X | X | X | X | X | X | X | X | X | X | X |
| Suicidal Thoughts in Past Year (MHSUITHK) | | | | | | | X | X | X | X | X | X | X |
| Suicidal Plans in Past Year (MHSUIPLN) | | | | | | | X | X | X | X | X | X | X |
| Suicidal Attempts in Past Year (MHSUITRY) | | | | | | | X | X | X | X | X | X | X |
| <i>Received Medical Attention for Suicide Attempt in Past Year (MHSUIMED)³</i> | | | | | | | X | X | X | X | X | X | X |
| <i>Stayed in Hospital for Suicide Attempt in Past Year (MHSUIHOS)³</i> | | | | | | | X | X | X | X | X | X | X |
| K6 Total Score in Past Month (K6SCMON) | | | | | | | X | X | X | X | X | X | X |
| Past Month Serious Psychological Distress Indicator (SPDMON) | | | | | | | X | X | X | X | X | X | X |
| K6 Total Score in Worst Month of Past Year (K6SCYR) | | | | | | | X | X | X | X | X | X | X |
| Alternative Worst K6 Total Score (WSPDSC2) | | | | | | | X | X | X | X | X | X | X |
| WHODAS Total Score (WHODASC2) | | | | | | | X | X | X | X | X | X | X |
| Alternative WHODAS Total Score (WHODASC3) | | | | | | | X | X | X | X | X | X | X |
| Predicted Serious Mental Illness Probability (SMIPP) ⁴ | | | | | | | X | X | X | X | | | |
| Predicted Serious Mental Illness Probability Revised (SMIPP_U) ⁴ | | | | | | | X | X | X | X | X | X | X |

Table 2. Key Mental Health Measures for People Aged 18 or Older: 2002–2014 (continued)

| Mental Health Measure (Variable Name) | Years Available | | | | | | | | | | | | |
|--|------------------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
| | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 |
| Serious Mental Illness (SMI) Based on Revised Predicted SMI Probability (SMIYR_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |
| Any Mental Illness (AMI) Based on Revised Predicted SMI Probability (AMIIYR_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |
| Mild Mental Illness Based on Revised Predicted SMI Probability(LMIYR_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |
| Moderate Mental Illness Based on Revised Predicted SMI Probability (MMIYR_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |
| Mild or Moderate Mental Illness Based on Revised Predicted SMI Probability (LMMIYRU) ⁶ | | | | | | | X | X | X | X | X | X | X |
| Serious or Moderate Mental Illness Based on Revised Predicted SMI Probability(SMMIYR_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |
| Categorical Mental Illness Indicator Revised (MI_CAT_U) ^{5,6} | | | | | | | X | X | X | X | X | X | X |

K6 = six-item nonspecific psychological distress scale, MD = medical doctor, MDE = major depressive episode, MH = mental health, WHODAS = abbreviated eight-item World Health Organization Disability Assessment Schedule.

NOTE: The letter X indicates that the measure is available for the year(s) shown. For measures with two variable names listed, the first name corresponds with the en dash (–) and the second name corresponds to the letter X in the years available columns. An en dash (–) indicates that a comparable measure with later years is **not** available; thus, variables corresponding to those measures should not be compared across breaks in comparability (i.e., do not compare those measures with an en dash (–) with those measures with the letter X). An empty cell indicates that the measure is not available.

NOTE: The standard analysis weight, ANALWT_C, should be used for all measures and years, except those noted in footnote 1.

NOTE: This table lists only the most commonly used mental health measures; it does not constitute a comprehensive list.

NOTE: This table was finalized on September 10, 2015.

¹ To compare the 2008 data with the 2009 or subsequent years, the 2008 mental health half-sample analysis weight, MHSAWT_C, should be used in conjunction with the sample indicator (MHSAMP08=1) to subset to the 2008 WHODAS half-sample data.

² Two versions of these variables exist for years 2002 through 2008. The original variables that end with a "2" have respondents who reported receiving no outpatient mental health coded as a SAS missing. The revised variables that end with a "3" have respondents who reported receiving no outpatient mental health coded as a "No" response. The two versions are not comparable.

³ Italicized MH measures indicate variables that were excluded from the Public Use File (PUF).

⁴ SMIPP (a variable included in previous versions of the 2008–2011 data files) is based on the 2008 prediction model and SMIPP_U is based on the 2012 prediction model. Mental illness variables originally created from SMIPP have been replaced with similarly named variables based on SMIPP_U. For information on the creation of the mental illness variables, see Appendix E, Recoded Mental Health Module Variable Documentation.

⁵ Mental illness variables based on the 2012 prediction model have been created from 2008 and later years. For years 2008–2011, these revised variables have replaced the previously available mental illness variables. See Appendix E, Recoded Mental Health Module Variable Documentation, for further details about these revised mental illness variables.

⁶ The mental illness variables based on the 2012 prediction model are not recommended to be used when analyzing variables for past year suicidal thoughts, past year MDE, the K6, or the WHODAS, nor are they recommended to be used when analyzing other variables closely linked with these variables (including past year suicide attempts, suicide plans, medical treatment for suicide attempts, lifetime MDE, serious psychological distress [SPD], or components used in the K6 or WHODAS scales). For more details, see Appendix E, Recoded Mental Health Module Variable Documentation.

Source: SAMHSA, Center for Behavioral Health Statistics and Quality, National Survey on Drug Use and Health, 2002–2014.

Table 3. Comparable Versions of Key Mental Health Measures for People Aged 18 or Older: 2002–2014

| Mental Health Measure | Years Available | | | | |
|---|------------------------|-----------------------------------|------------------|-------------|------------------|
| | 2002–2003 | 2004 | 2005–2007 | 2008 | 2009–2014 |
| Lifetime Major Depressive Episode | | | AJAMDELT | AJAMDELT | AMDELT |
| Past Year Major Depressive Episode | | | AJAMDEYR | AJAMDEYR | AMDEYR |
| K6 Total Score in Worst Month of Past Year Based on Long Form Module | SMI_SUM | SPD_ASCR | | | |
| K6 Total Score in Worst Month of Past Year Based on Short Form Module | | SPD_RSCR | SPD_USCR | | |
| Worst K6 Total Score in Past Year ¹ | | | K6SMXADJ | K6SCMAX | K6SCMAX |
| Past Year Serious Psychological Distress Indicator Based on Long Form Module | SMI | SPD_ADJ, SPD_UADJ ² | | | |
| Past Year Serious Psychological Distress Indicator Based on Short Form Module | | SPD_RADJ | SPD_UADJ | | |
| Past Year Serious Psychological Distress Indicator Based on Worst K6 Total Score | | | SPDYRADJ | SPDYR | SPDYR |

K6 = six-item nonspecific psychological distress scale.

NOTE: All variables within a row are comparable across the years indicated, even if they have different names.

NOTE: The standard analysis weight, ANALWT_C, should be used for all measures and years, except as indicated in footnote 2 below.

NOTE: This table lists only the mental health measures with adjusted versions for comparability across years.

NOTE: In the 2002 and 2003 NSDUHs, serious psychological distress was referred to as serious mental illness.

NOTE: This table was finalized on September 10, 2015.

¹ Worst K6 Total Score in Past Year is the maximum of K6 Total Score in Past Month (K6SCMON) and K6 Total Score in Worst Month of Past Year (K6SCYR).

² SPD_UADJ, restricted to the 2004 Sample A (Long Form), was used in the 2004 NSDUH detailed tables (Office of Applied Studies, 2005). SPD_ADJ was created so that comparisons of serious psychological distress based on the long form can be made between 2002, 2003, and the full 2004 sample. The standard analysis weight, ANALWT_C, should be used for SPD_ADJ, but for SPD_UADJ in 2004, the Sample A analysis weight, SPDWT_C, should be used in conjunction with the sample indicator that subsets to the 2004 Sample A data (ADLTSAMP=1).
